INTRODUCTION AND METHODOLOGY

Responsive Management conducted this study for the American Sportfishing Association (ASA) and the National Fishing in the Schools Program. The study entailed four surveys of teachers and students involved in the Program. There was a survey of teachers and a survey of students administered prior to the Program and then surveys administered after the Program.

DESIGN OF QUESTIONNAIRES

The surveys were designed by Responsive Management with input from the ASA and those involved with administering the Program. The survey was designed to be administered online or to be printed out and taken on paper by both teachers and students. The survey was then provided to the schools involved in the Program, and the schools themselves administered the surveys.

SURVEY SAMPLES AND SURVEY ADMINISTRATION

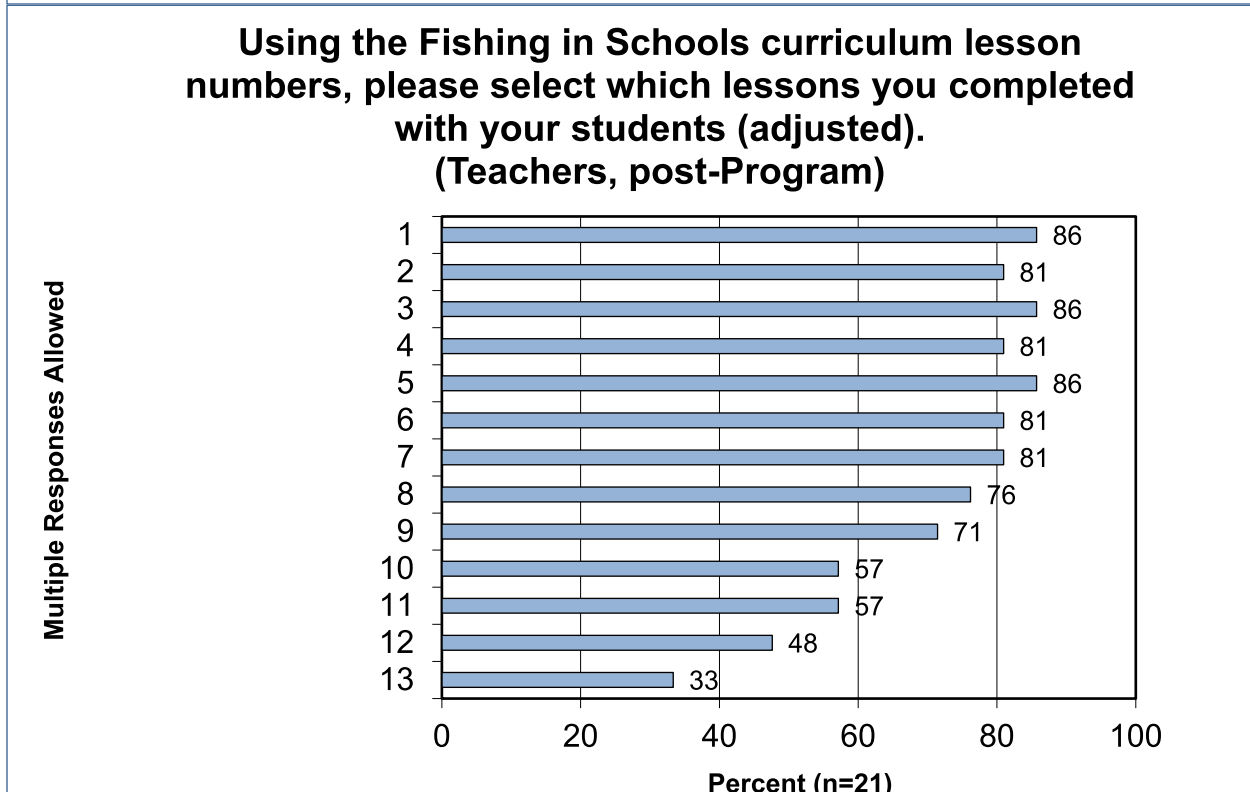

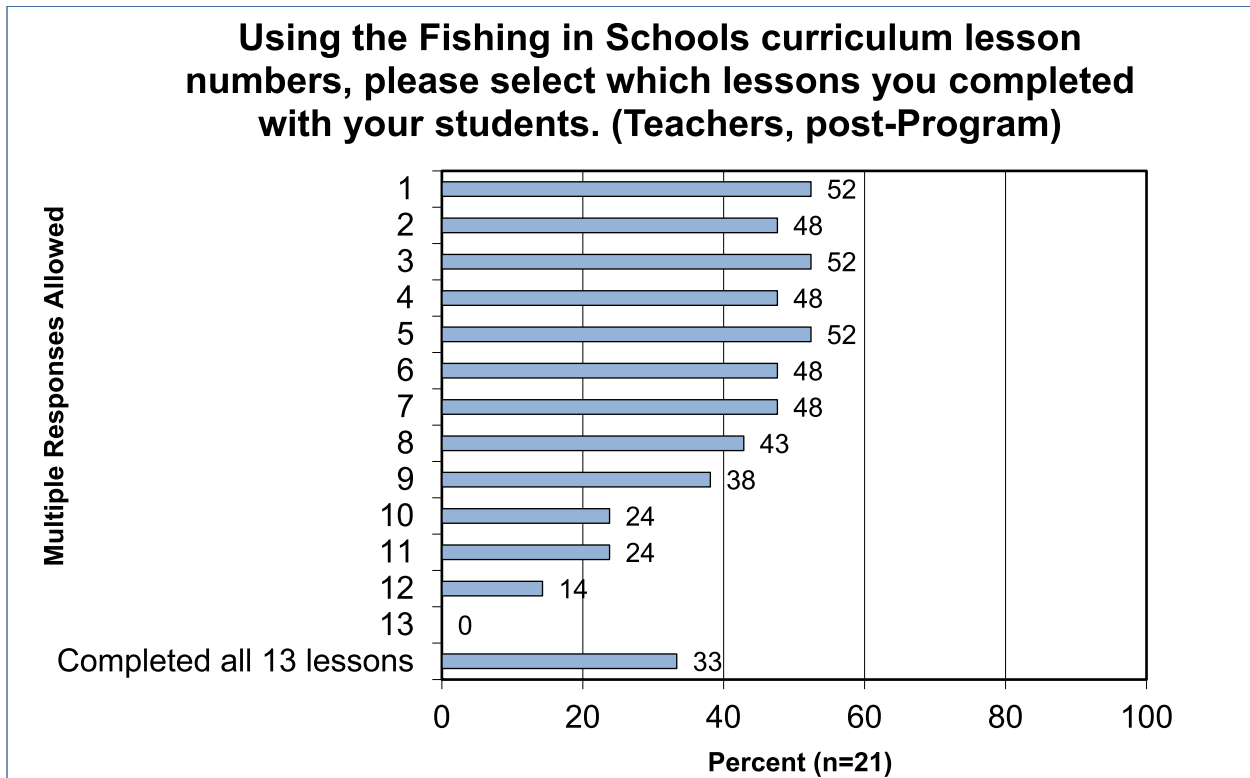

The samples consisted of teachers involved in the Program from a listing provided by the Program administrators. The surveys were sent to the teachers by the Program administrators, and the teachers completed the surveys meant for them. The student surveys were provided to the teachers, who then administered the survey to the students involved in the Program. The surveys were administered from April 2021 through March 2023.

DATA ANALYSIS

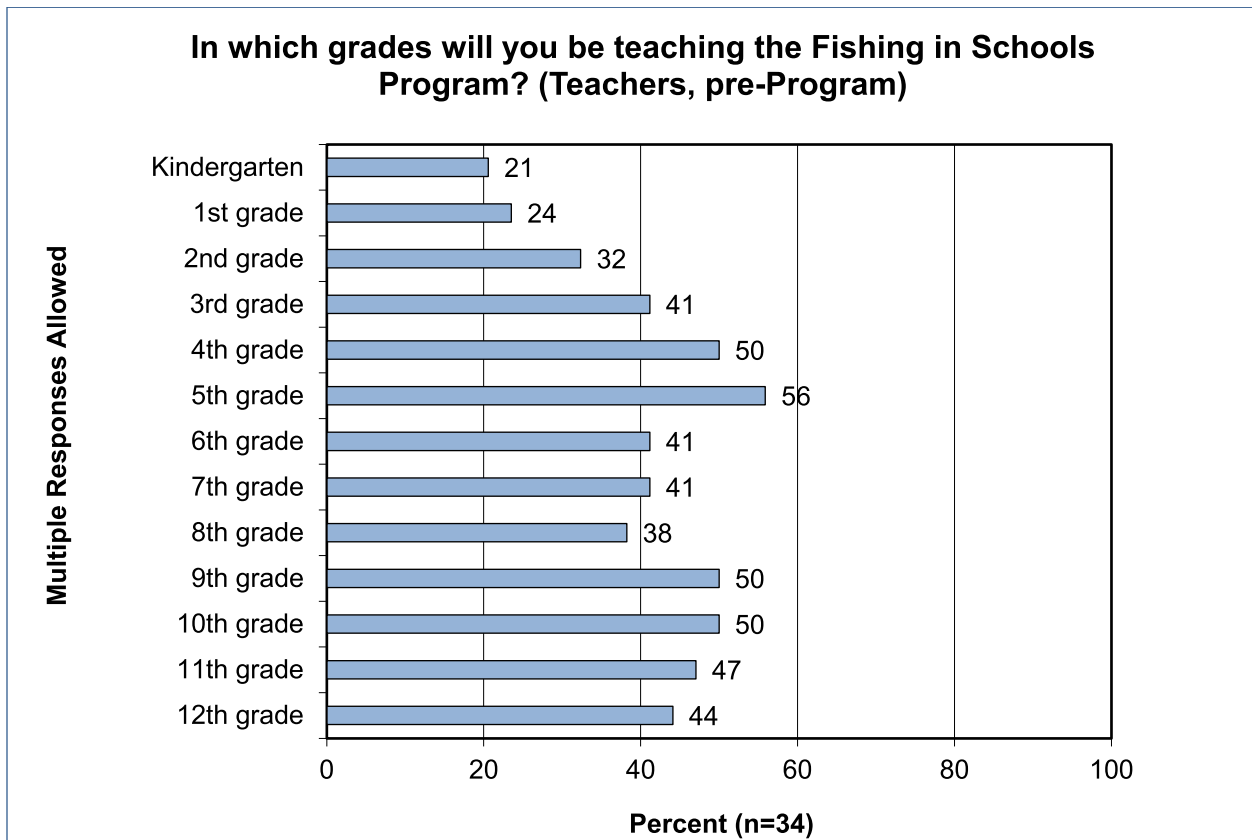

The analysis of data was performed using IBM SPSS Statistics as well as proprietary software developed by Responsive Management.

TEACHERS' USE OF THE PROGRAM

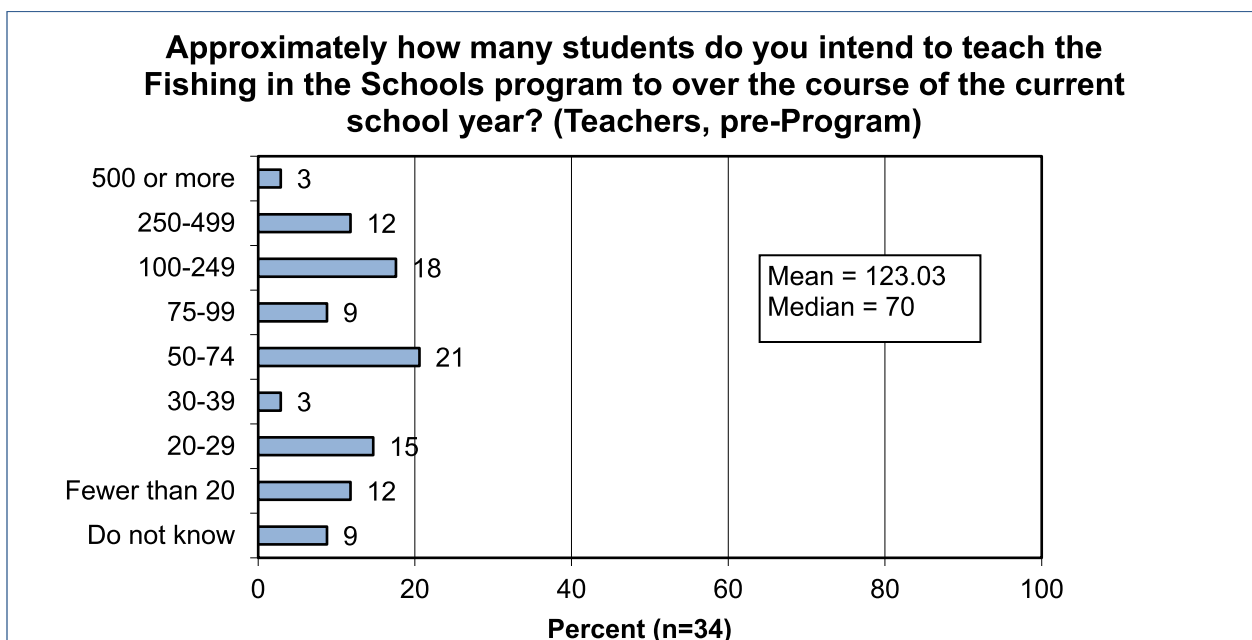

A third of teachers completed all the lessons, as shown in the first graph. The second graph puts that information into the specific lessons that were completed.

The Program was taught across all grade levels.

Prior to the Program, the survey asked teachers the expected number of students in the Program. The range is wide, with some teachers teaching only a few and others teaching hundreds.

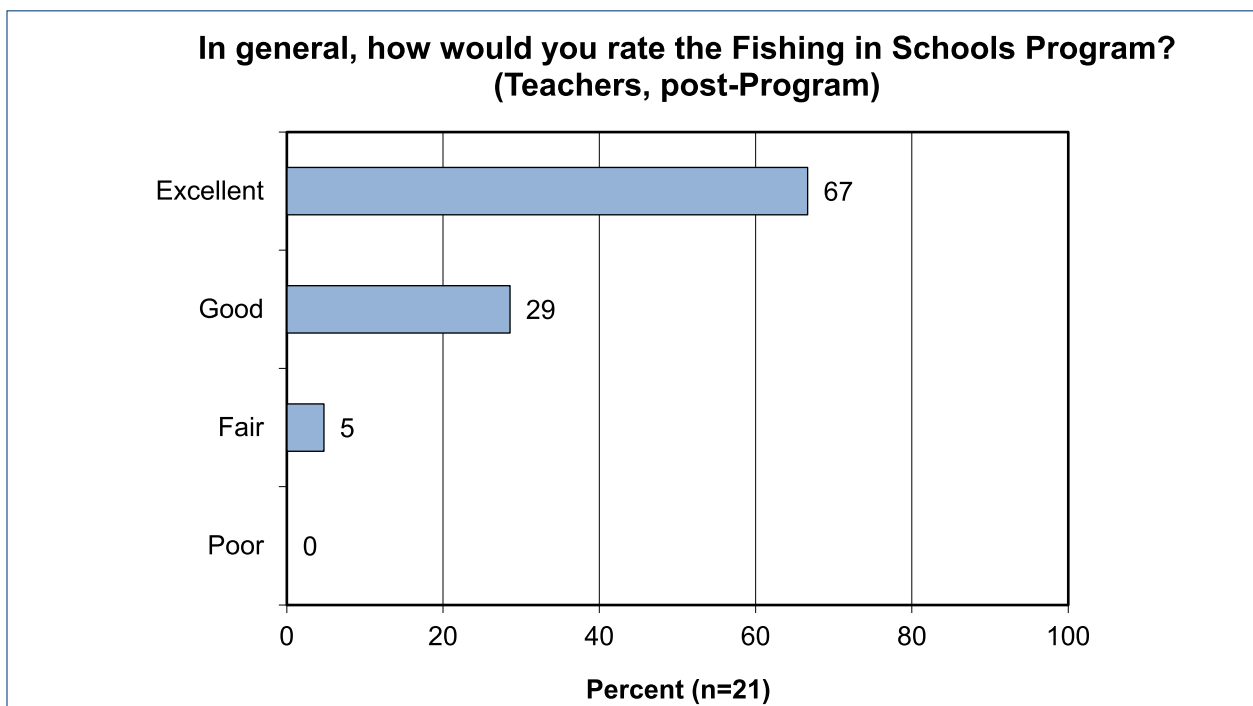

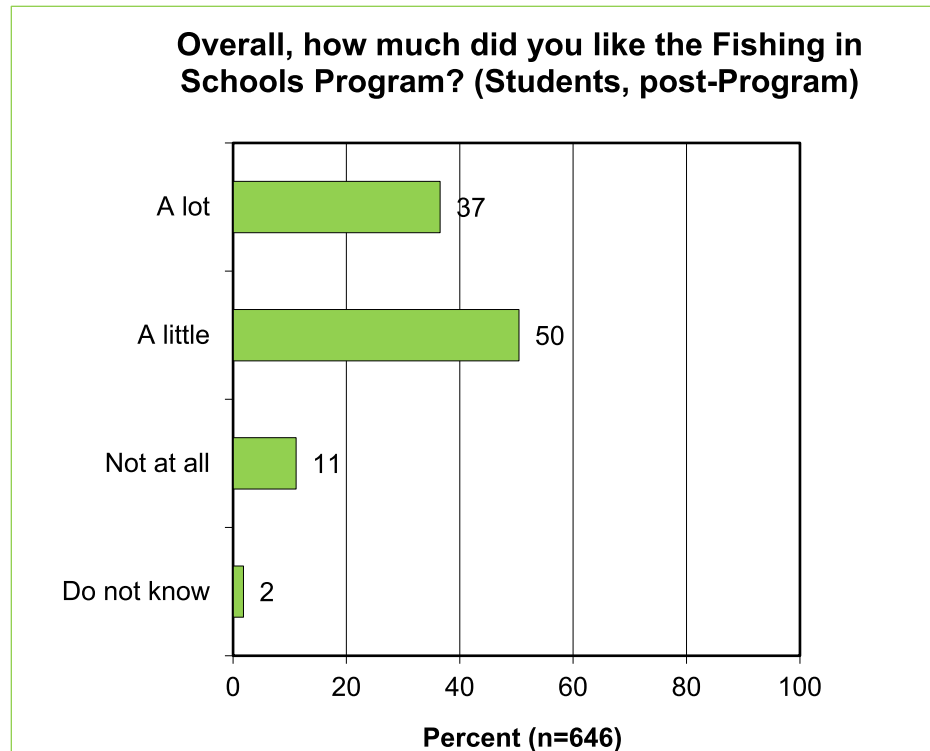

OPINIONS ON THE PROGRAM

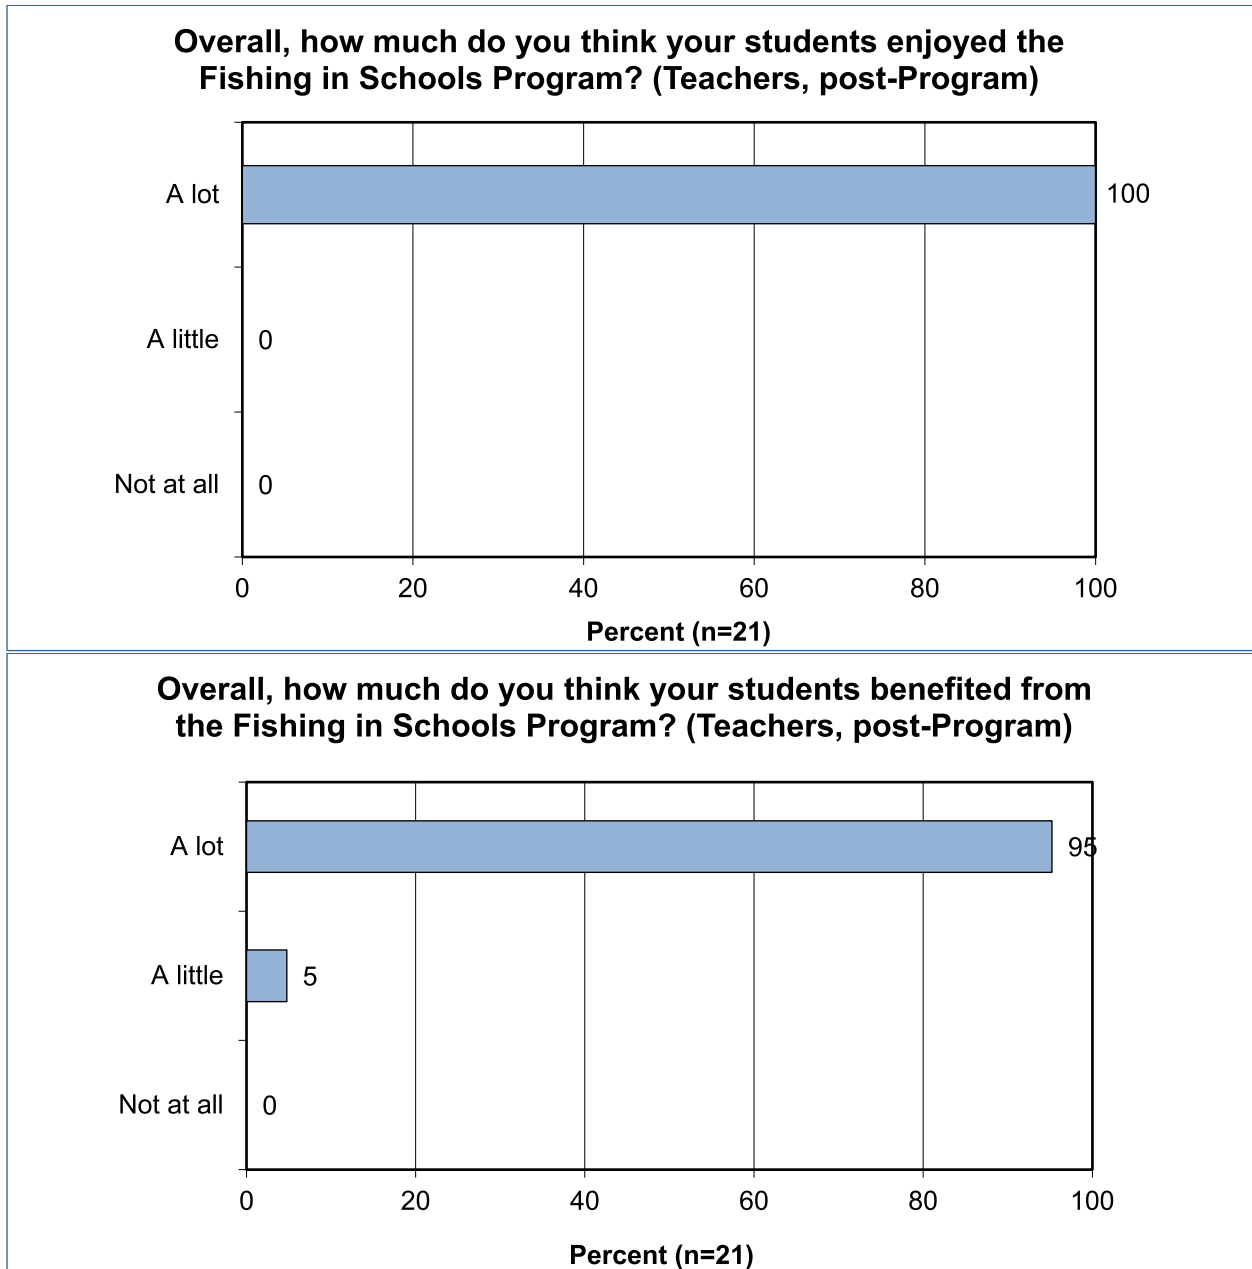

This section looks at opinions on the program overall before looking at specific aspects of the program.

OPINIONS ON THE PROGRAM OVERALL

Two general questions asked students how much they liked the Program and asked teachers to rate the Program. More than a third of students (37%) liked the Program *a lot*, and another 50% liked it *a little* (a sum of 87%). Nearly all teachers (95%, summed on unrounded numbers) rated the Program in the top half of the scale, with 67% rating it *excellent*.

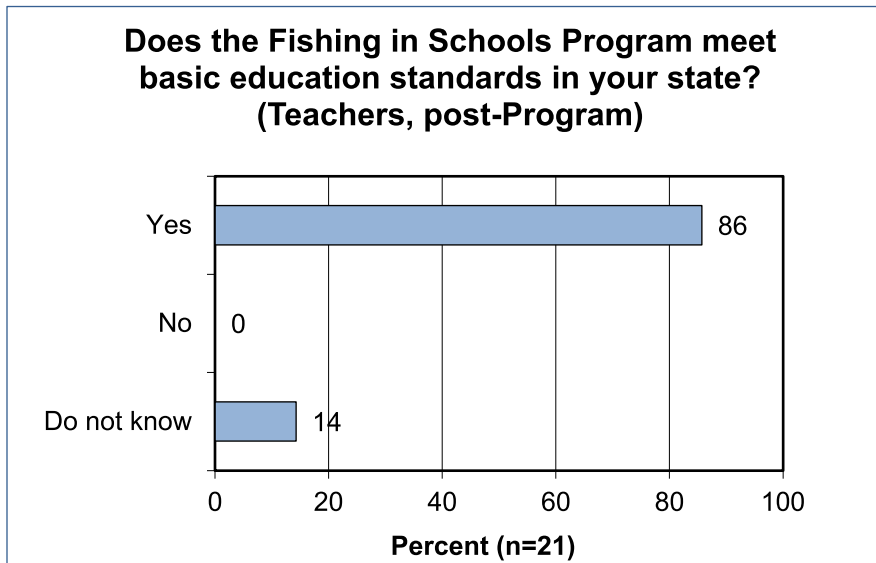

The teachers unanimously thought that the students enjoyed the Program *a lot*. Their perceptions were a bit higher than students' actual enjoyment, as previously shown. Teachers also nearly unanimously thought that the students benefited *a lot* from the Program.

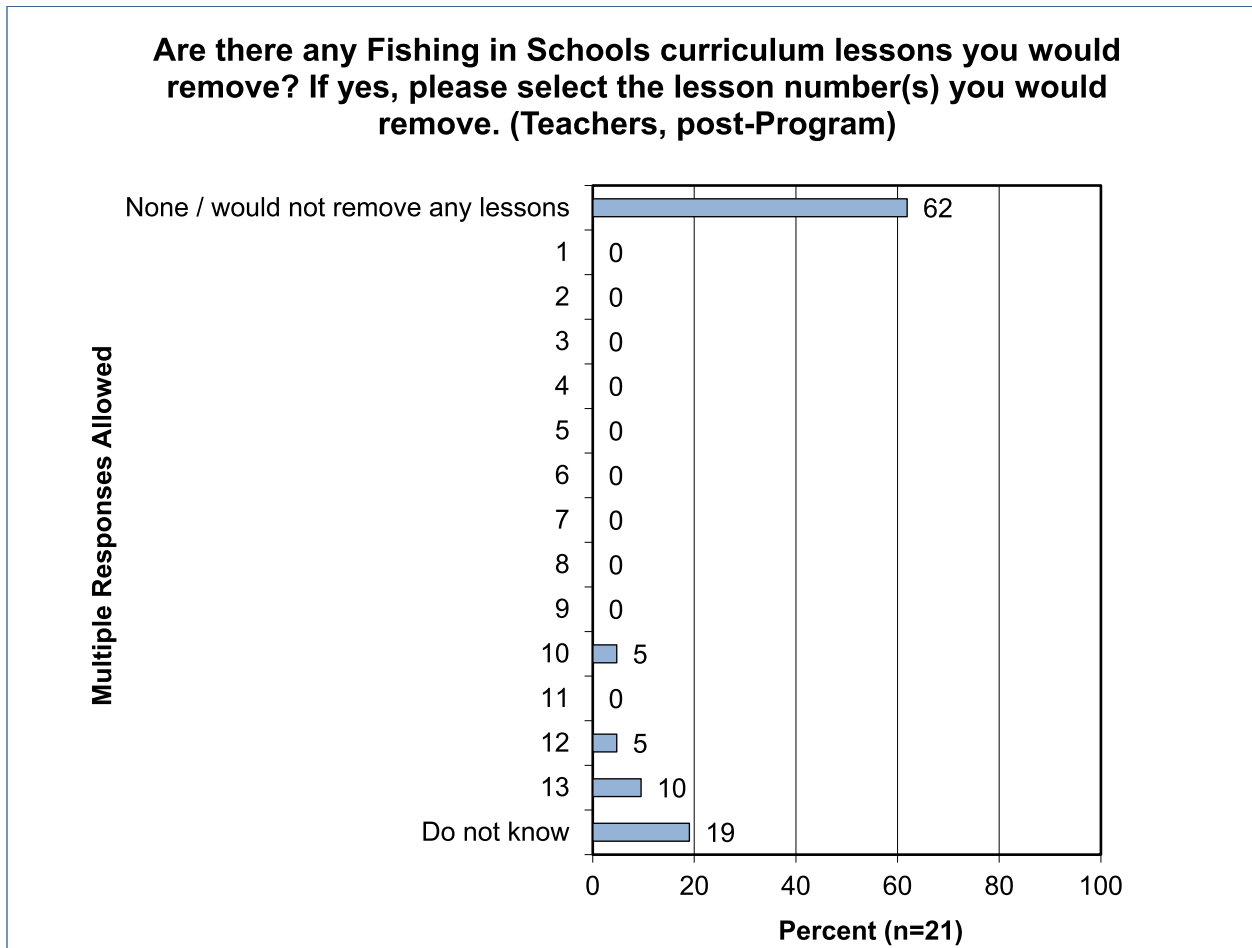

The survey asked an open-ended question (in which no answer set is provided and to which any response that comes to mind can be given) about the benefits that teachers saw in the Program. The responses are tabulated below.

In your opinion, what were the greatest benefits of the program for your students? (Teachers, post-Program)
Chill environment. Learning together. Everyone is challenged regardless of prior knowledge.
Exposing students who have never been fishing to a life long activity they can enjoy with their families.
I have already had students tell me that they want to go fishing or tell me that they have. They let me know that they used the knots we did during the lesson. I think they better understand how to treat the fish while fishing as well.
They had fun with something different... and they improved!
Understanding the techniques of casting, fish identification, lure and bait information for certain species, proper catch and release, knot tying, and rules for fishing as you get older.
Students learned resiliency through overcoming challenges they faced through the curriculum, such as how to correctly tie knots.
Giving students a chance to learn the basics of fishing who have never had an opportunity before.
Giving them a chance to fish who have never had a chance before.
Huge intro on how to fish- different types- how to cast
I believe the information presented will spark an interest in fishing! The curriculum is very well planned out and gives kids info they need to be successful. Kids became very comfortable with the rods and were able to use them effectively.
Exposing students to fishing, that otherwise would never have been involved in any fishing activity.
Introducing students to skills they haven't used before. Giving them the skills to participate in a lifelong activity.
It generated interest and knowledge for students that normally would not have an opportunity. The program reinforced STEM learning in a fun way.
Being introduced to a skill and pass time they wouldn't ordinarily have the opportunity to experience in a school setting.
Learning how to properly cast and LAND a fish. Being with their friends outdoors.
Giving the youth the basics of fishing. Many of the youth have never been fishing before and do not have anyone to teach them. Through having it be a school based activity it opens the doors to a new passion.
The greatest benefits by far is the ability to teach fishing fundamentals in a gym during a normal class period. For many of us, taking the students off-site for multiple days is not an option. This gives me an opportunity to teach all of my students the basics!
Getting kids familiar with the equipment, so they can be more independent while fishing with others. Also, my kids were very curious on the fish species. So, they loved having that info on the fish as they caught them.
I honestly did not know how to fish and I didn't think I'd like it at first. This has influenced me to take a weekend to go fishing.
The kids being able to get their hands on real equip, time/drills to improve their accuracy & learning about all the ins/outs of fishing as they go.
They got to be outside and learned something that they can utilize in their local environment.

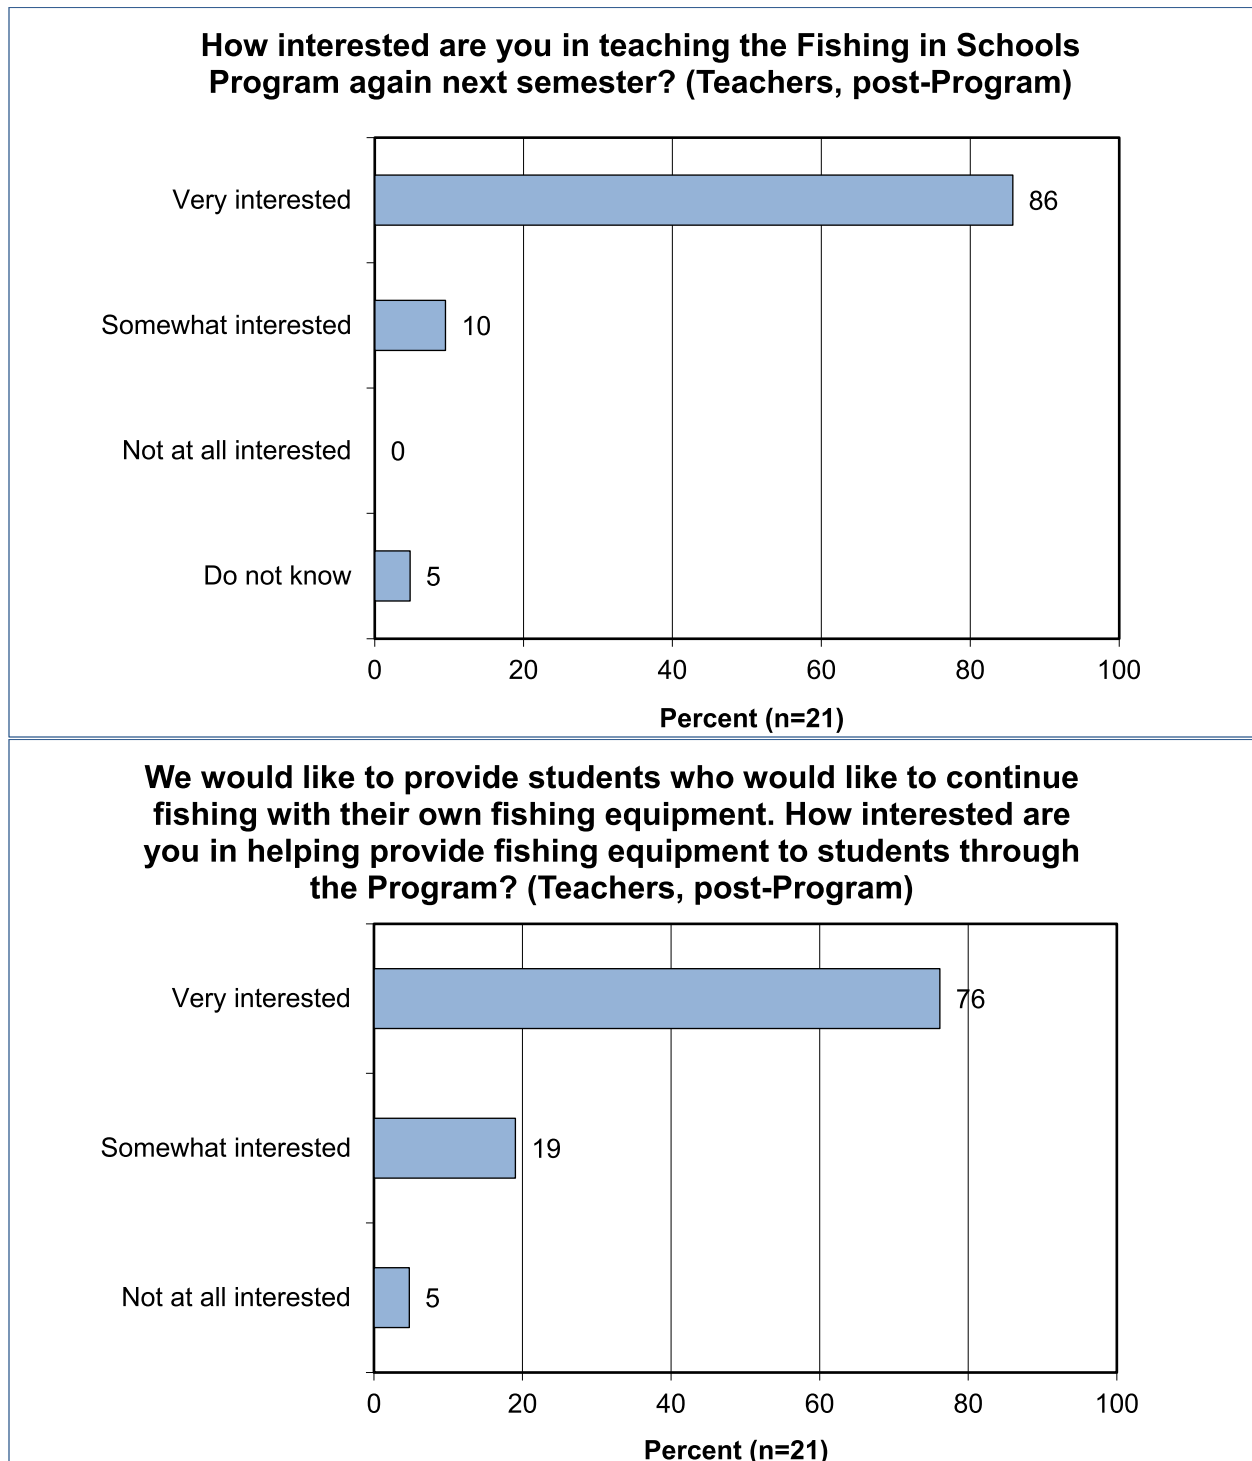

Most teachers felt that when they taught the Program it had met basic education standards: 86% felt that it did, and the remainder did not provide a response (and were, therefore, coded into the *Do not know* response).

The large majority of teachers would not recommend removing any of the lessons that are part of the Program. The lessons that a small percentage wanted to remove are near the end of the curriculum.

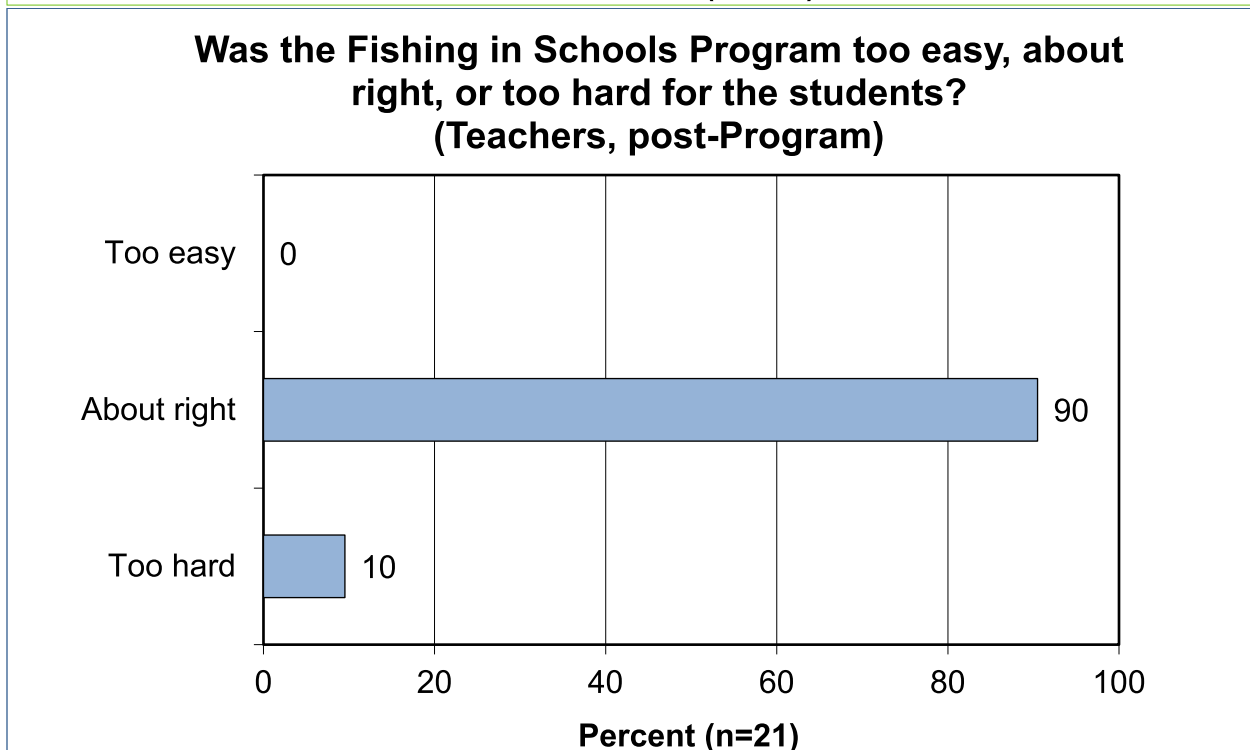

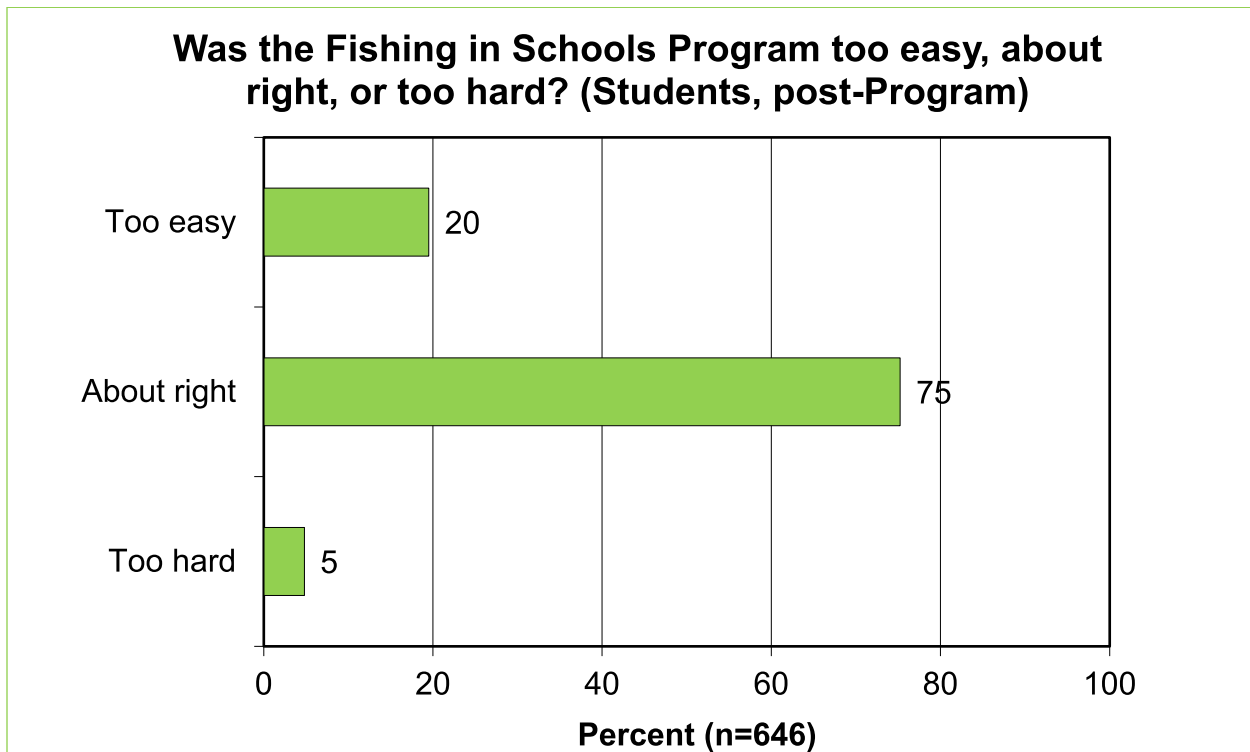

Finally in this section, two post-Program questions found that teachers have a high level of interest in teaching the Program again (86% are very interested, and 10% are somewhat interested—an unrounded sum of 95%). Likewise, a large majority are interested in providing equipment to students to encourage their continued participation (76% are very interested, and 19% are somewhat interested—also an unrounded sum of 95%).

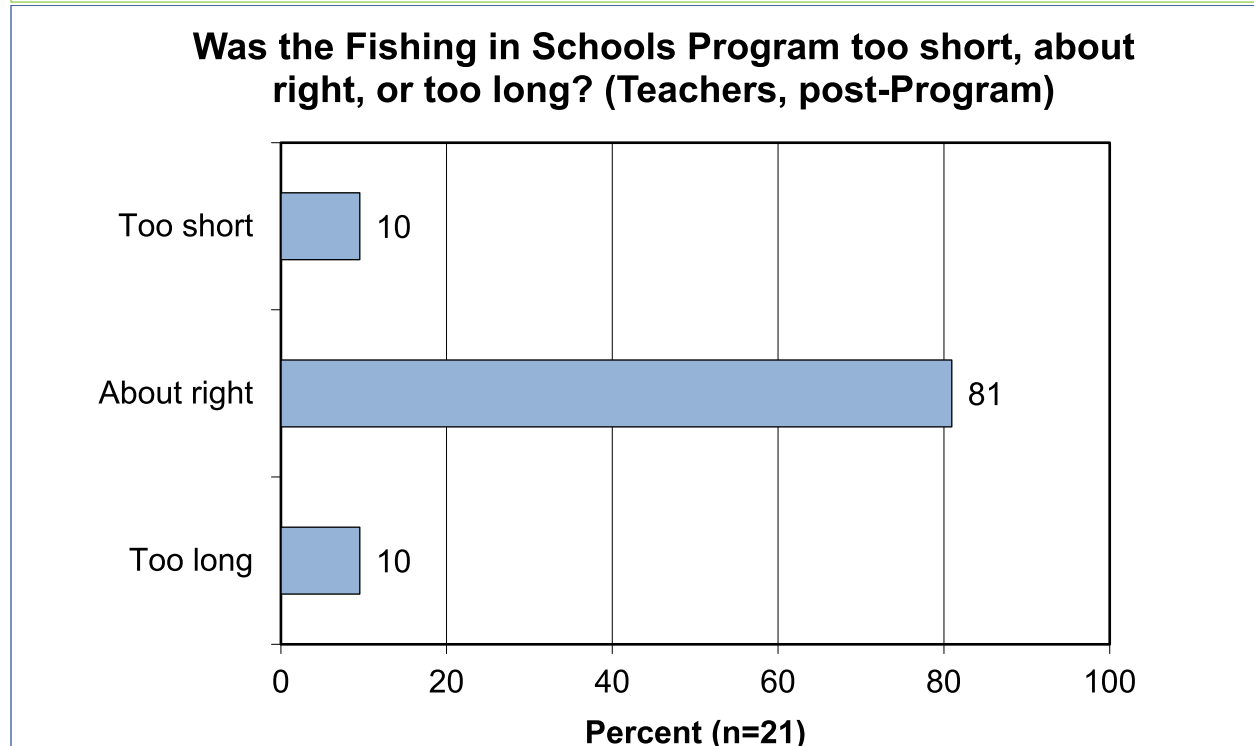

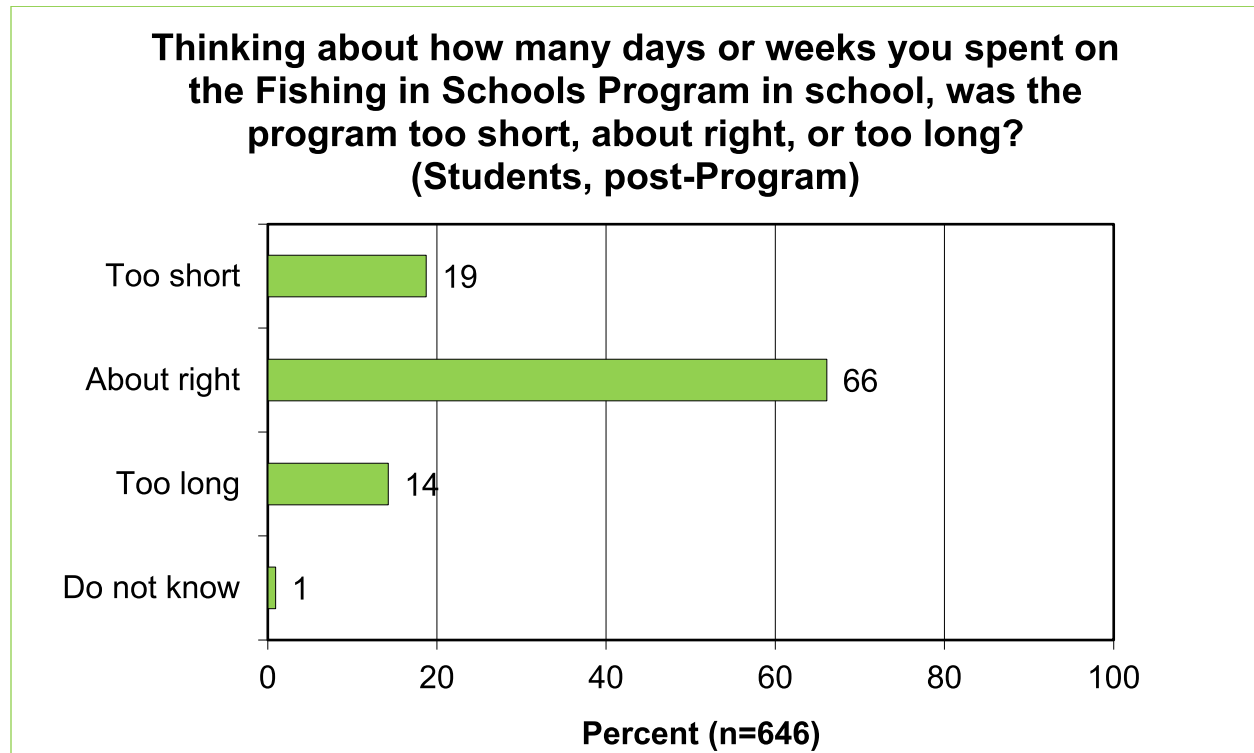

OPINIONS ON VARIOUS ASPECTS OF THE PROGRAM

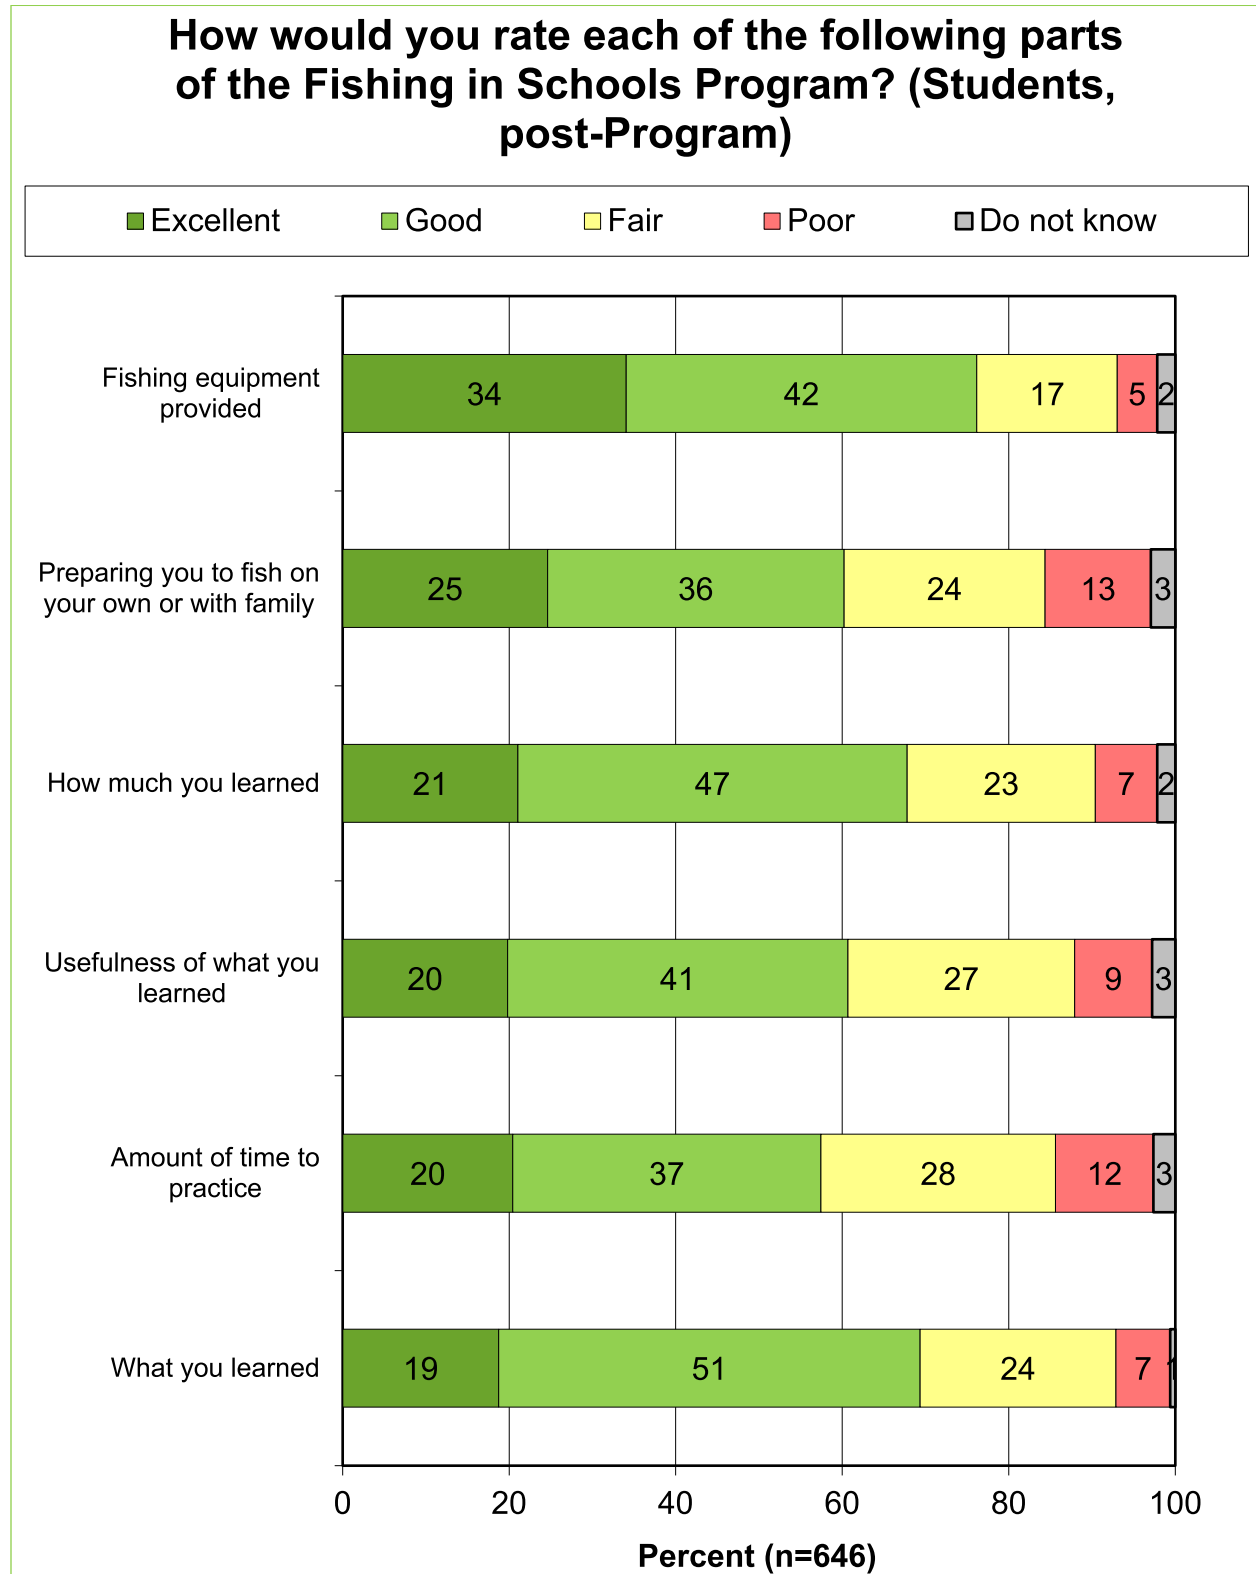

The large majority of students (75%) thought the Program was neither too easy nor too hard, rating it *about right*. Likewise, the large majority of teachers (90%) rate it as *about right*.

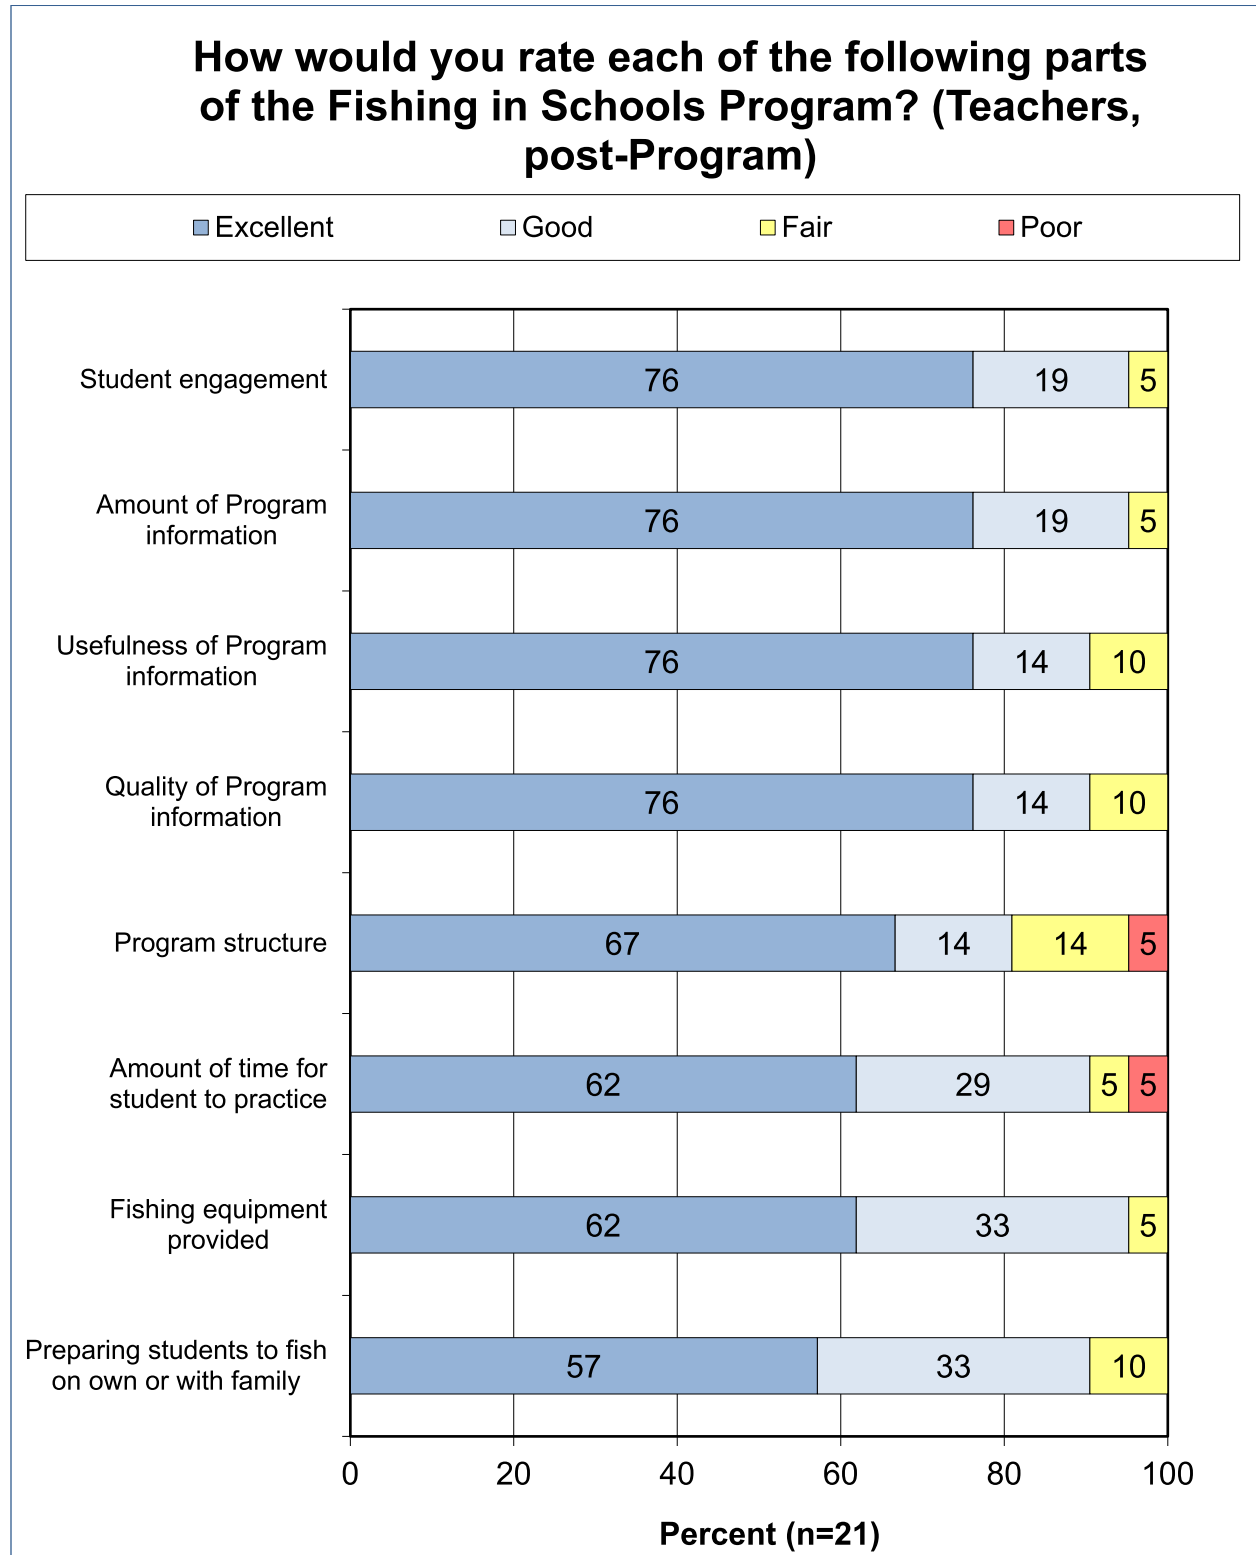

Most students felt that the Program's length was *about right*. Teachers, too, for the most part felt that the length of the Program was *about right*.

Students rated various aspects of the Program. Their best ratings, based on a ranking by *excellent* responses, are for the fishing equipment provided and how well the Program prepared them to fish by themselves or with their family. For every aspect, a majority of students rated it in the top half of the scale (*excellent* or *good*).

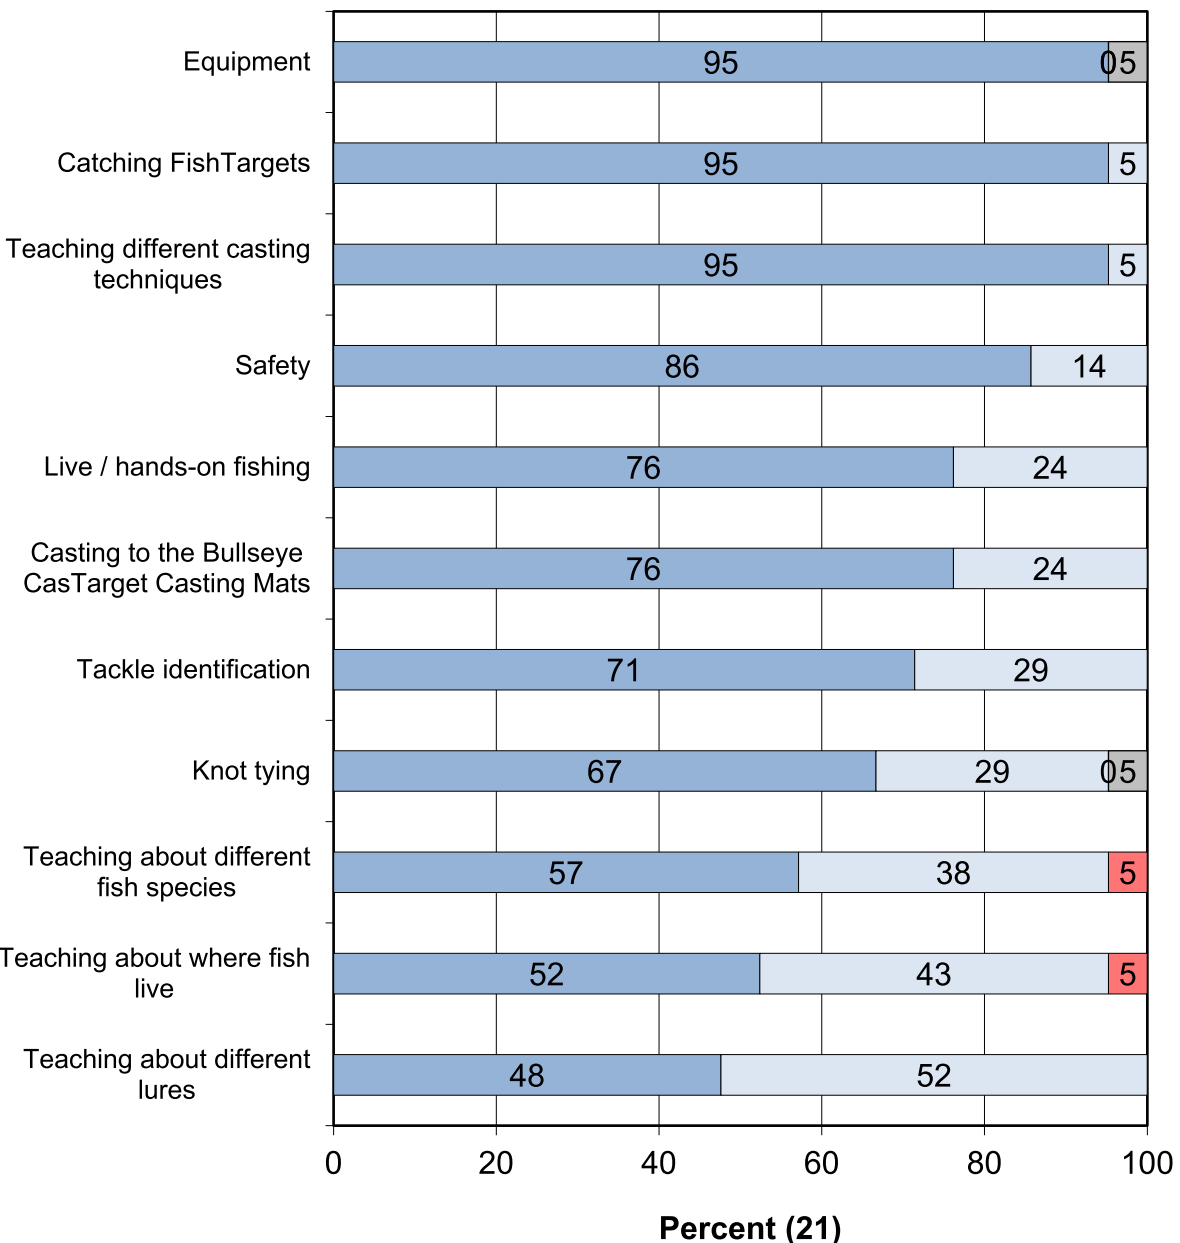

Four aspects are in the top tier, as rated by teachers: the usefulness of Program information, student engagement, the quality of Program information, and the amount of Program information—all given *excellent* ratings by three quarters of teachers. No aspect had a high percentage in the lower half of the scale.

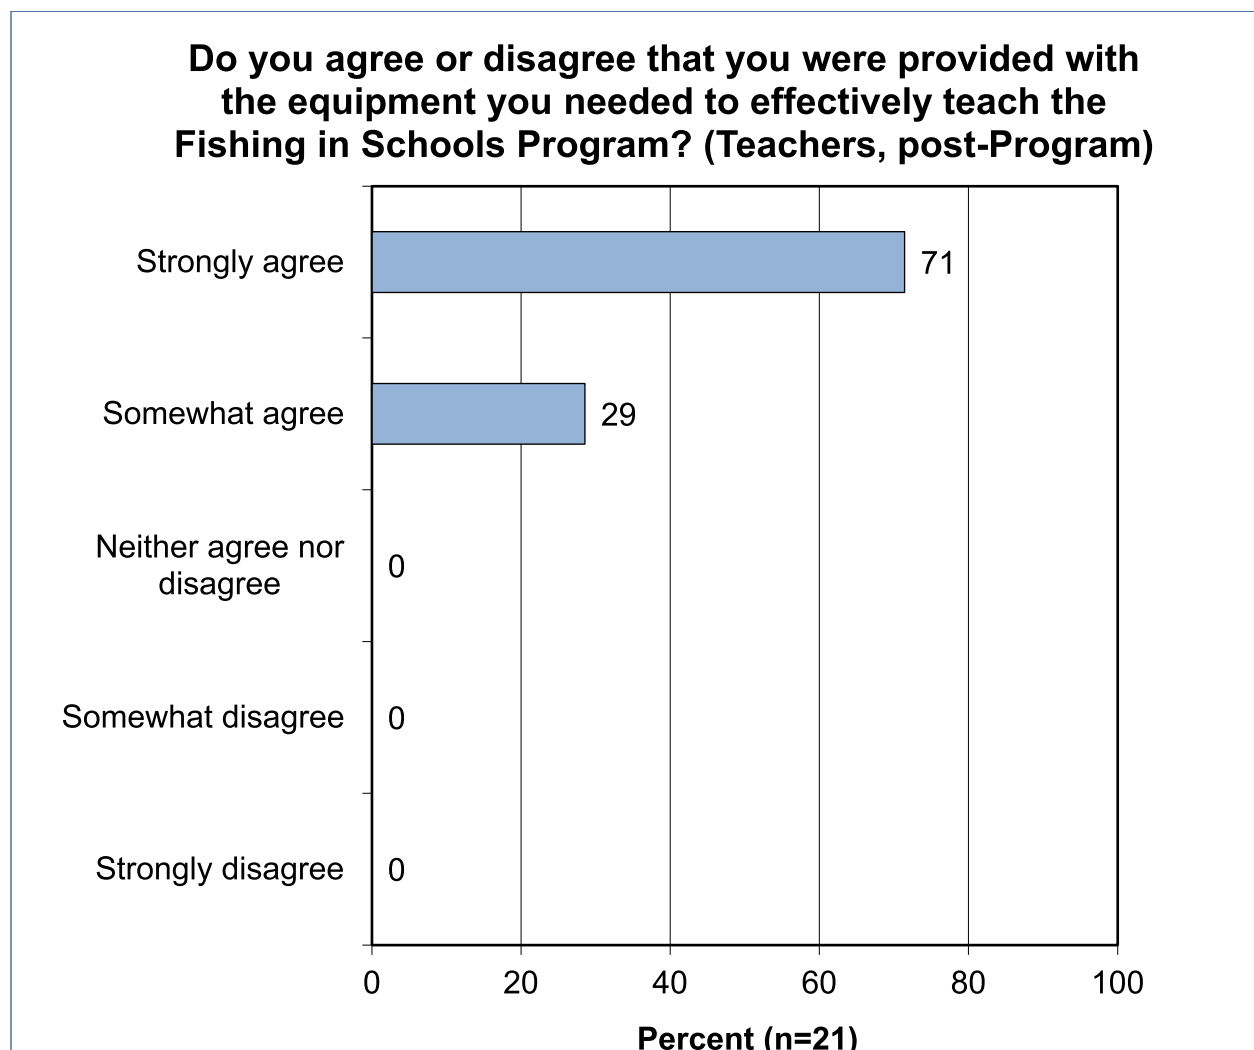

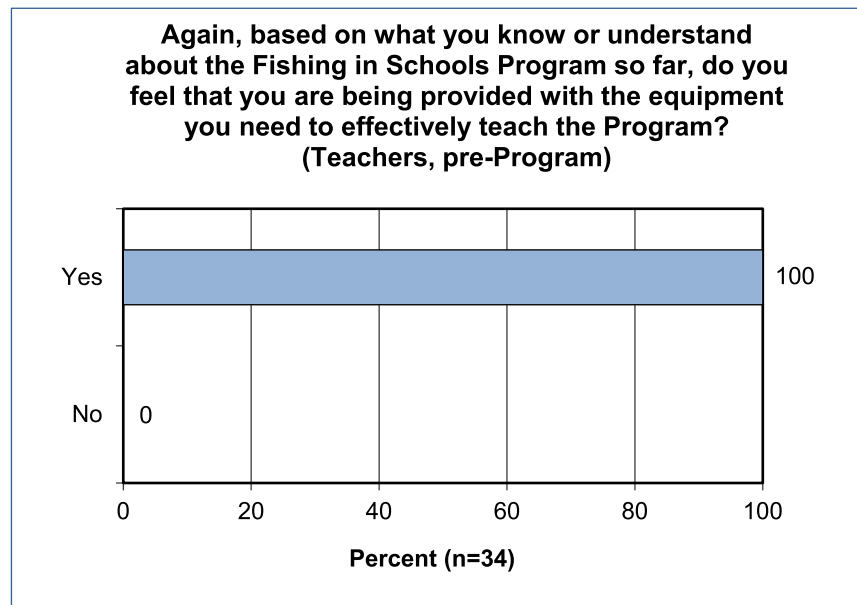

Teachers rated various elements of the Program. The best ratings were for the equipment, the catching of FishTargets, and the teaching of different casting techniques—nearly unanimously rated as *very important*.

Please rate how important you think each of the following elements is for the Fishing in Schools Program. (Teachers, post-Program)

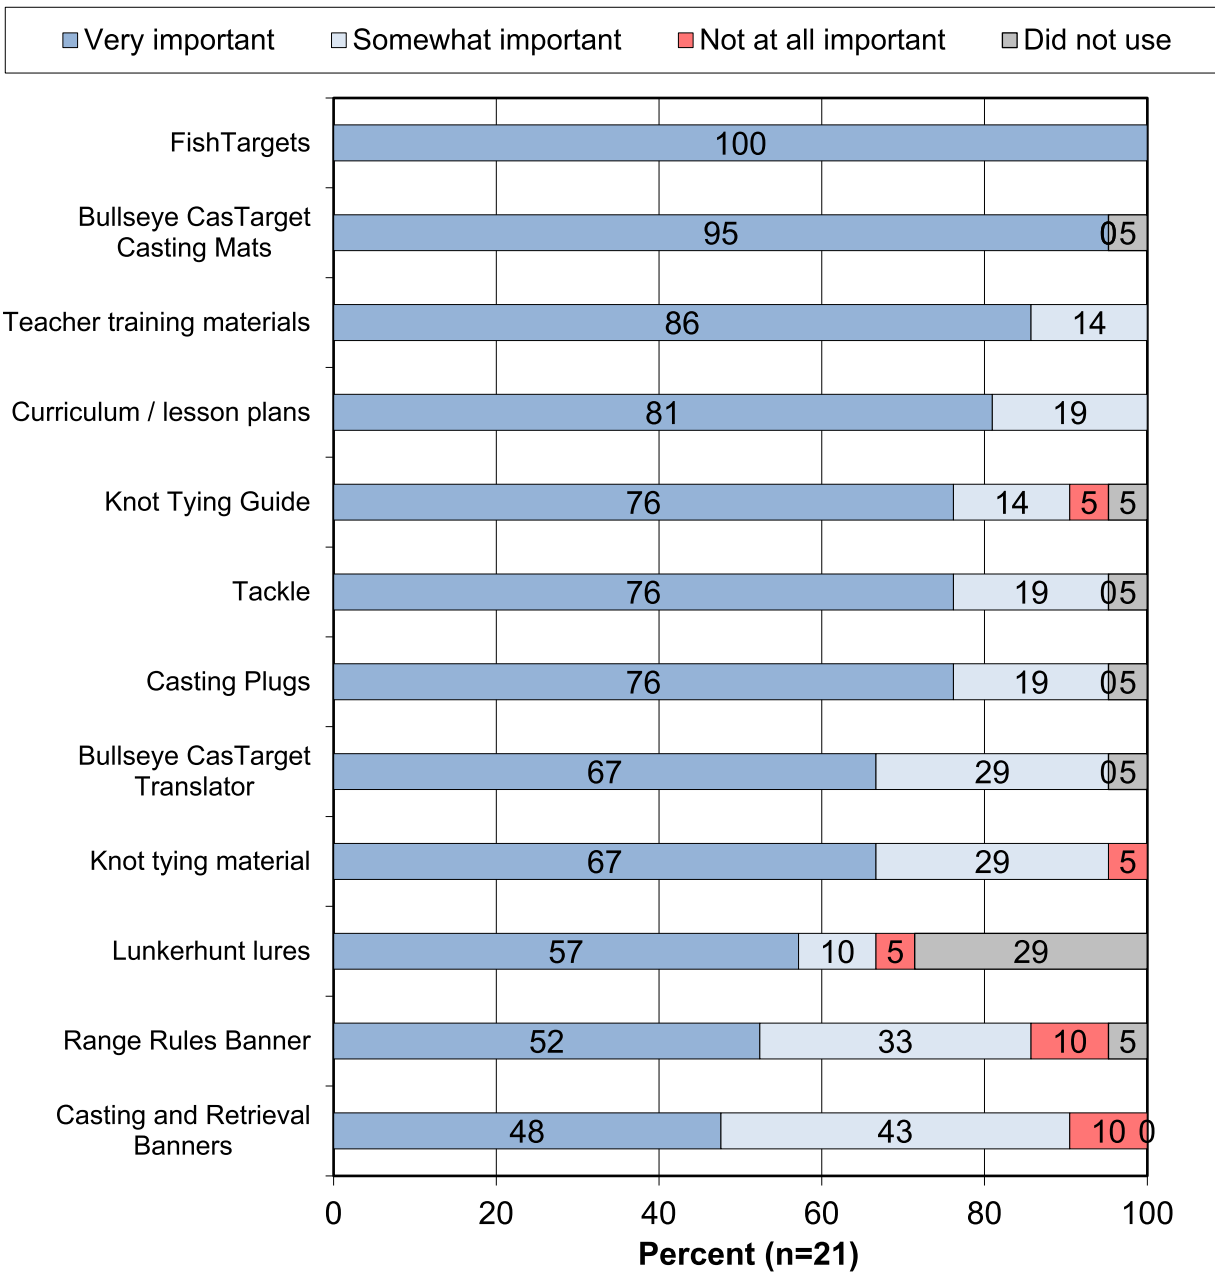

Several questions asked about equipment provided by the Program, on this page and the next. All teachers thought, at the beginning of the Program, that they were being provided with the necessary equipment. After the Program, all of them agreed that they had been provided with the necessary equipment, with most of them *strongly* agreeing.

A series of questions asked about the importance of each item in the equipment kit that was provided. The highest importance is placed on FishTargets, Bullseye CasTarget Casting Mats, teacher training materials, and curriculum/lesson plans—each with more than 80% rating it very important.

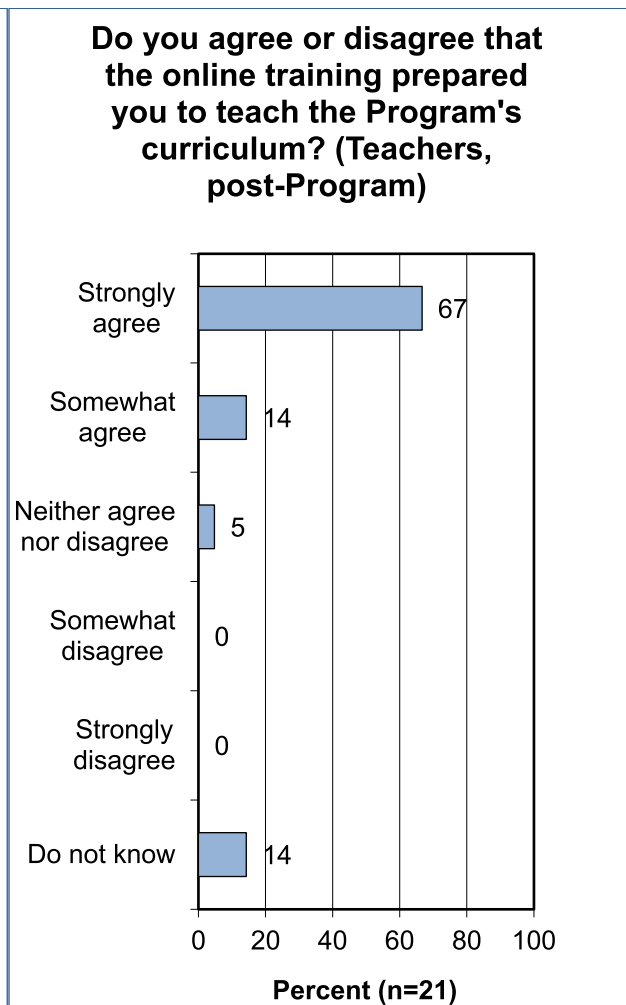

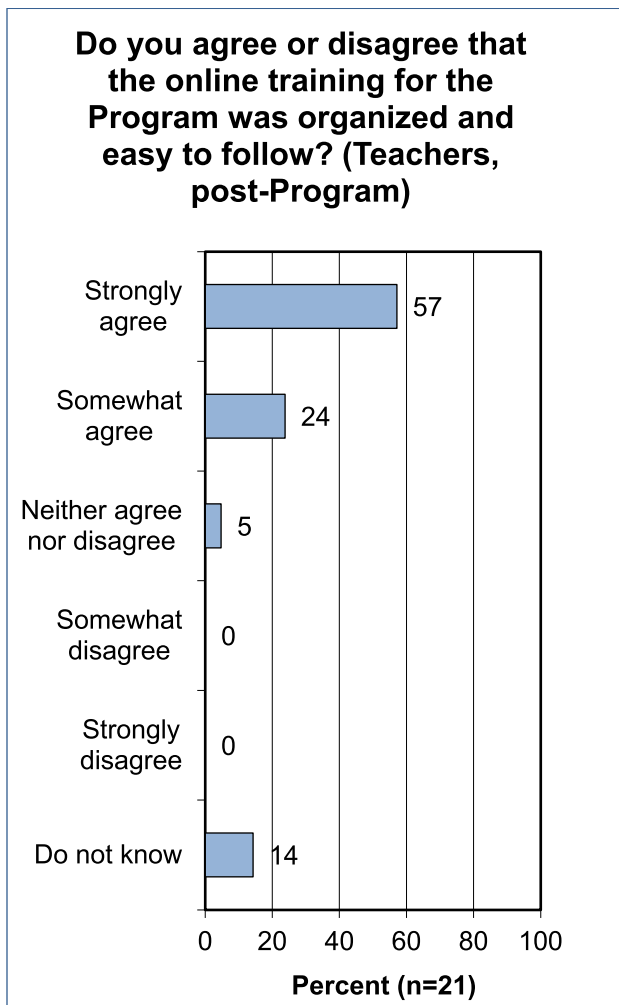

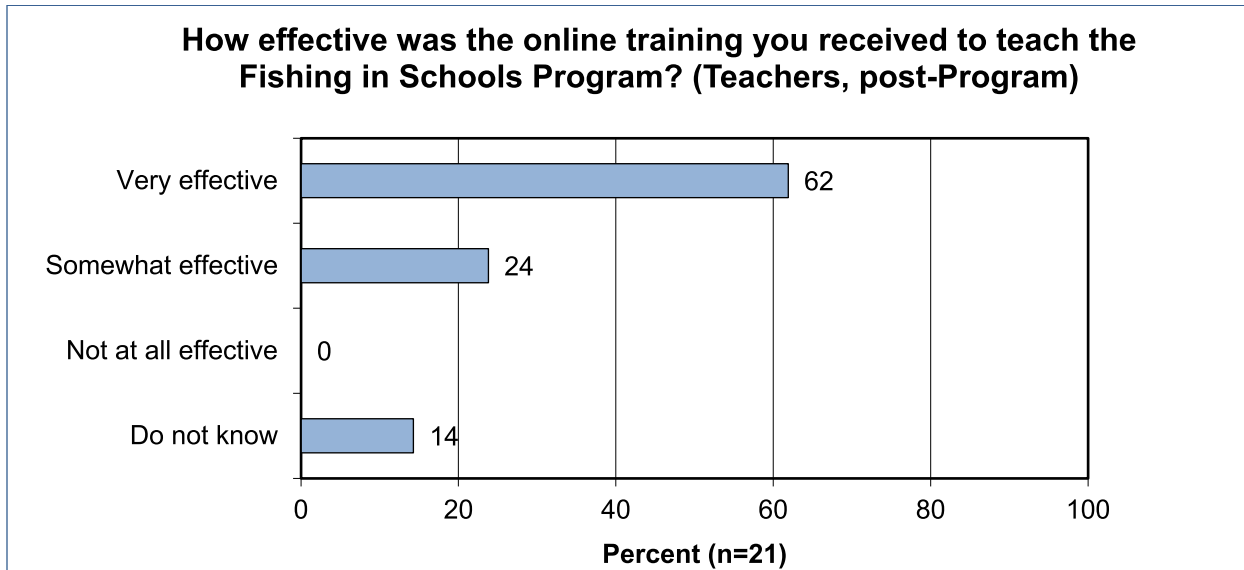

The Fishing in Schools curriculum kit provides specific tools for teaching the Program. How important would you say each of the following provided tools is for teaching the Program? (Teachers, post-Program)

The survey asked teachers an open-ended question about any additional equipment needs that they would like to fill to teach the Program. Their results are tabulated below.

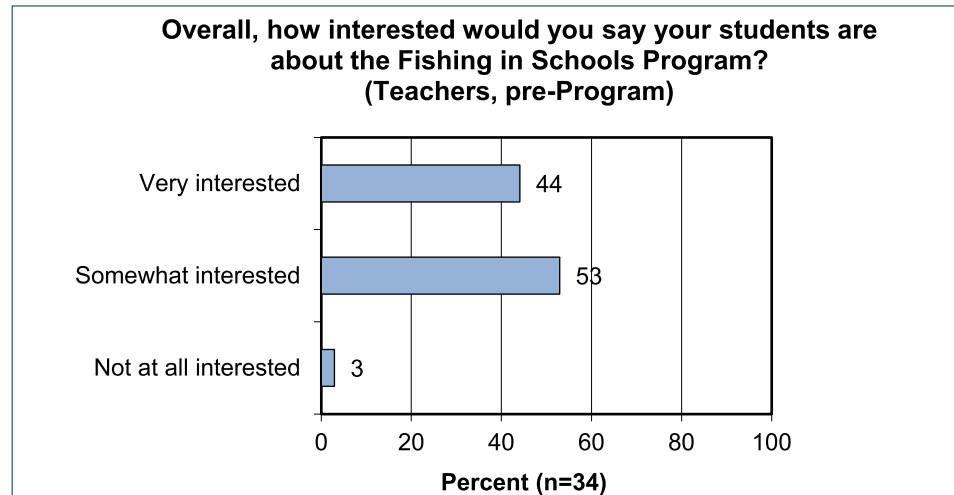

Specifically, what additional equipment needs do you have or would you like to see met to effectively teach the program? (Teachers, post-Program)
None needed
My only issue was keeping rods in good operating order. I was constantly fixing the reels. I ran with only 8 (of the 11) lanes so I would always have an extra rod incase some got tangled or jammed. I personally would love a video on how to fix the reels. I can do basic repairs but I have two reels I cannot fix. A local experienced angler has agreed to look at those two.
None
Maybe some hooks and power bait for the end of the year field trip added to the equipment.
The Range Rules should be on the same type of material as the Casting Banners. They needed to be up daily and we were doing the programming outside. The material used for the Range Rules would want to roll up and was not durable.
A few more of a variety of lures.
Bait casting rod/reels
I had a couple of the reels break (from student use) and replaced those. It would be nice if there were a couple extras provided as students do get tangles and trying to fix that during a lesson is hard. It's nice to have another rod/reel to pull out and use. I also had some smaller rods (from my father) that I used with the same type of reel. These were really nice for some of my special needs students. The shorter length was easier for them to handle.
I would like to have extra rod and reals. Preferably at least 20 rod and reels. The plugs are great but the ones we had would brake on the gym floor.
I wish we could have used a hook as well just to have the 100% experience with that
More Fish Targets and the 3 types of habitats in a vinyl mat to release fish (categorize/classify) species.
In our area we do not use the lungerhunts lures. We fished from the bay near our school on salt water. We needed regular hooks and bait for the students. We found the casting plugs too heavy and they actually broke the line on a few rods. So we made our own 'plugs' using rings and paracord. We had just finished a unit in making bracelets, so it fit in perfectly. The kids each made their own plug about 1' long, this seemed to be a better weight and they enjoyed having their own unique colors. We also used a bit of wire to put on the velcro hooks for the indoor fish. The students LOVED catching the stuffed fish. We had many games and contests that we developed. They could have done that for hours every day.
Hooks for students to practice with so they get familiar tying knots with a sharp (or pointed) object. Would have liked an answer key to all worksheets as per the curriculum.
I would like to see an upgrade in rods for future years. The rods we were provided were good enough to teach in the gym but I fear that I will need to repair/replace after multiple years of use.
More of the velcro 'hooks' to catch the fish targets with. They do wear out & lose their stickiness.
I think what is provided is sufficient, especially for the time that we have to do this program.

Three questions asked teachers about the online training. Nearly all thought it was *very* or *somewhat* effective, nearly all agreed that the online training was organized and easy to follow, and nearly all thought the online training prepared them to teach the curriculum.

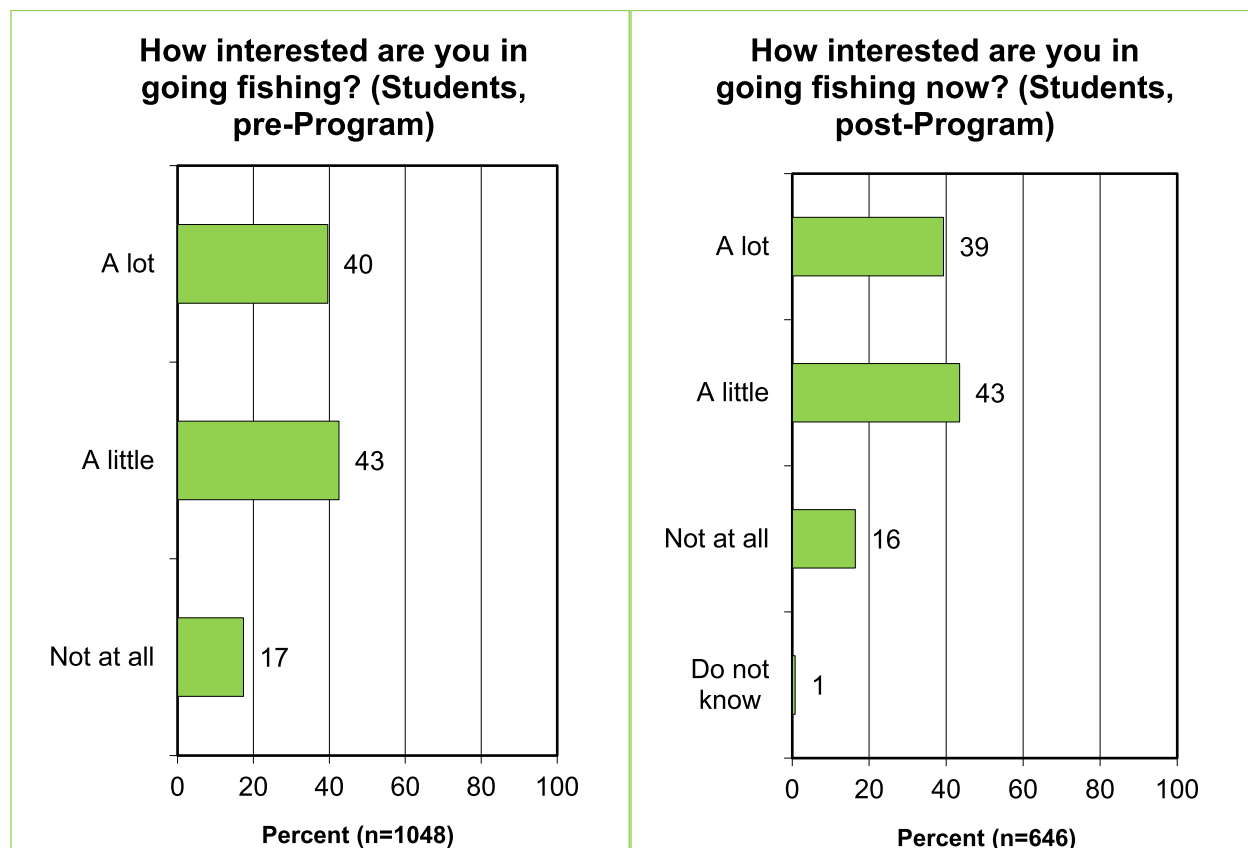

EFFECTS OF THE PROGRAM ON FISHING PARTICIPATION

The pre-Program survey asked teachers about initial interest in the Program. Going into it, nearly all teachers felt that there was some interest.

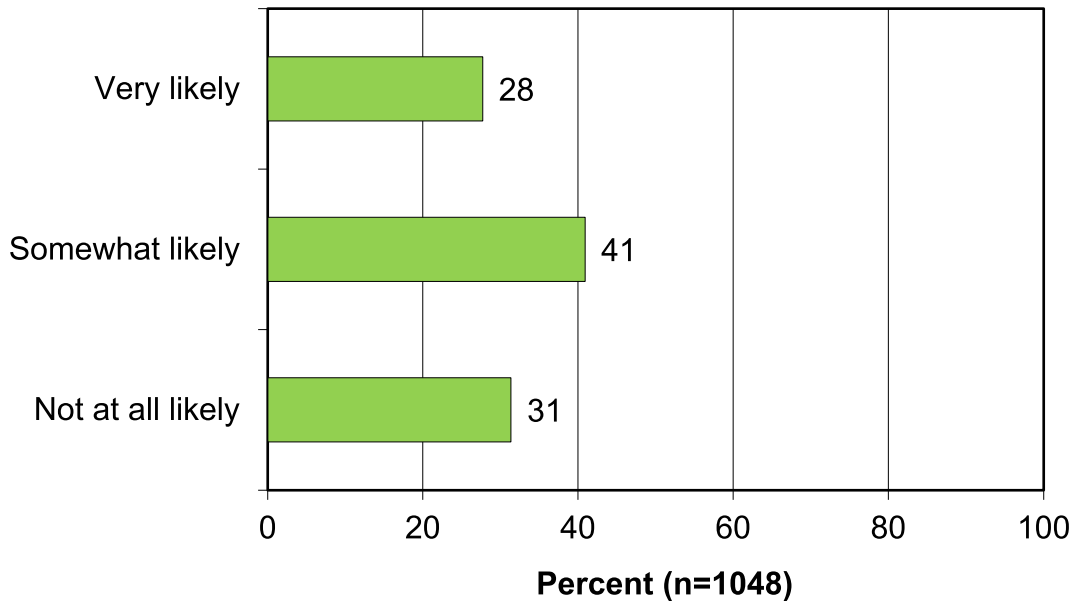

Most students showed some interest in fishing prior to the Program; that interest was maintained but not increased after the Program. Note that these questions are not linked, so it may be that the similarity masks individuals' movements. It may be that some who were interested *a lot* prior to the Program are now at *a little*, and some who were *a little* interested are now interested *a lot*.

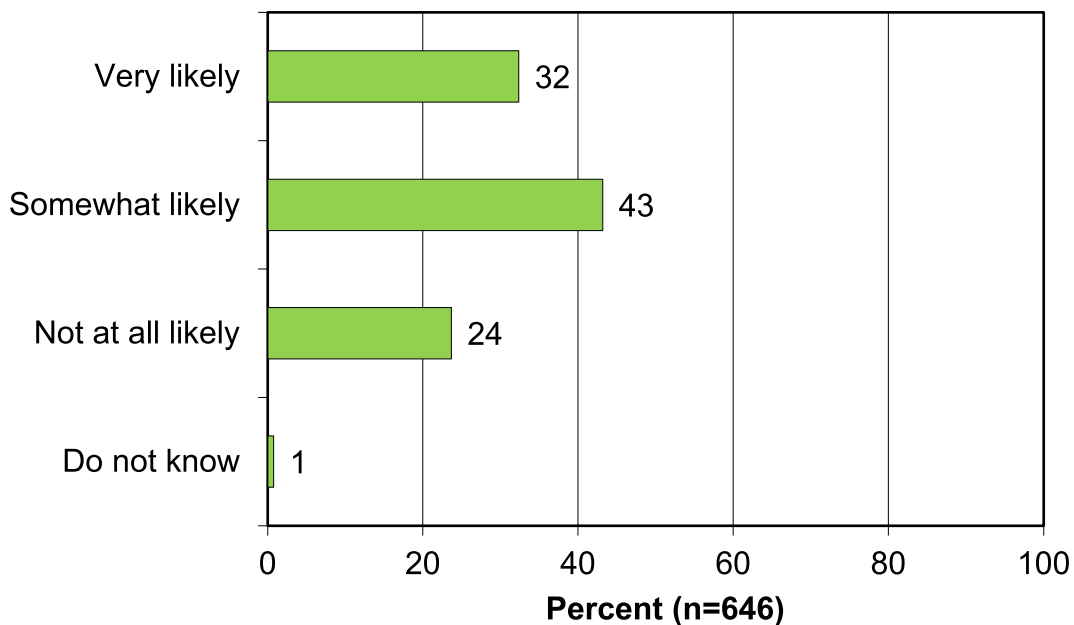

Likelihood to fish increased slightly after the Program, with about two thirds of students being likely before and three quarters being likely after the Program.

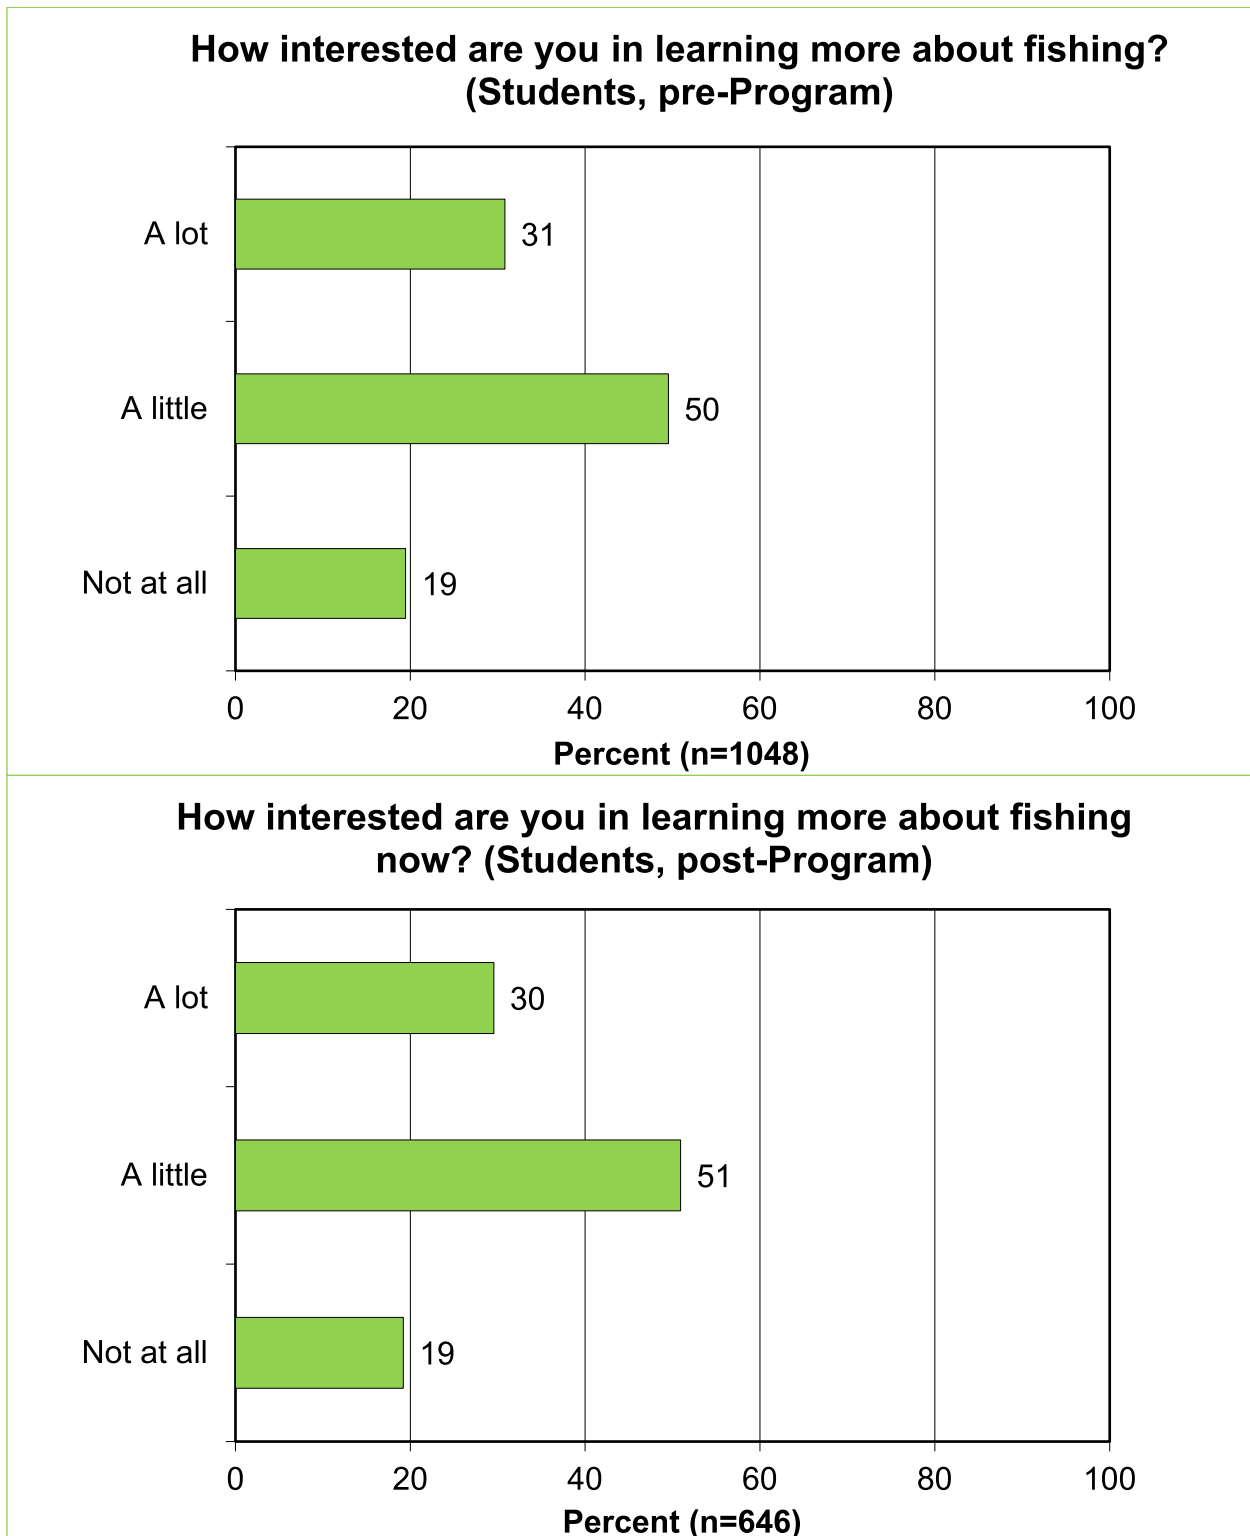

Not including the Fishing in Schools Program, how likely are you to go fishing in the next year? (Students, pre-Program)

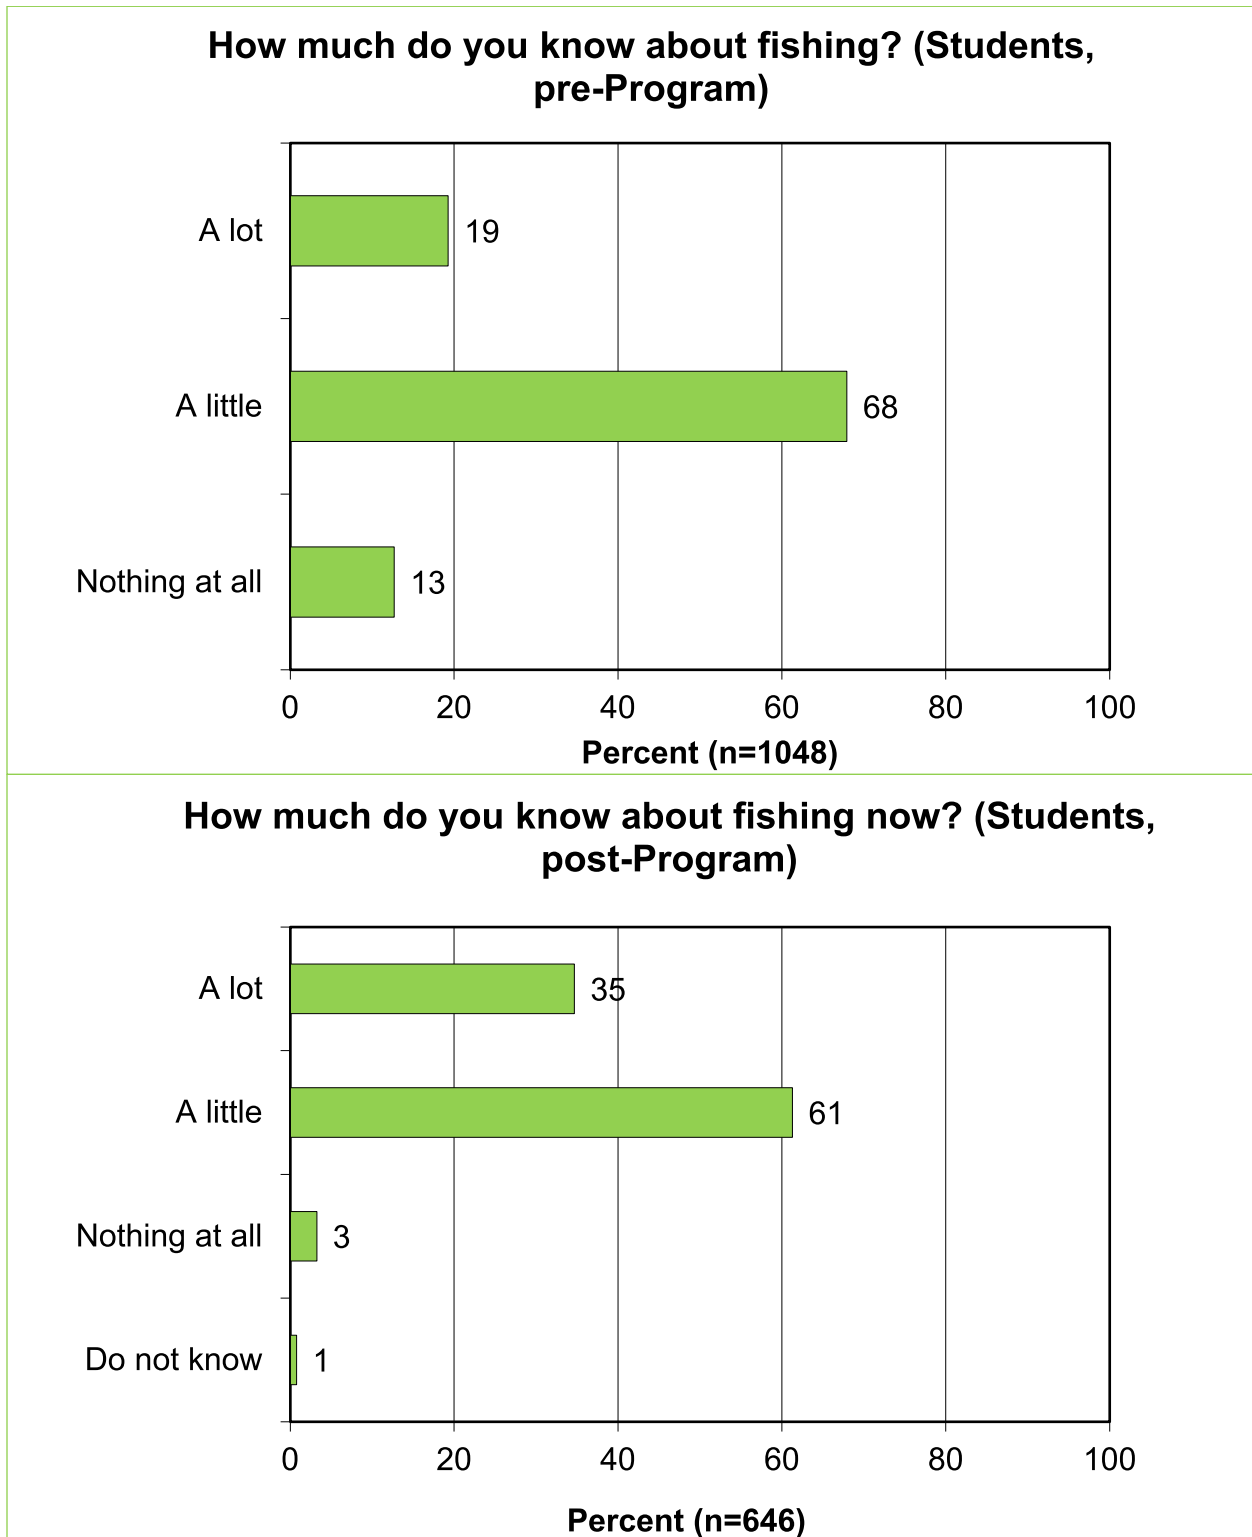

How likely are you to go fishing in the next year? (Students, post-Program)

Prior to the Program, students' interest in learning more about fishing was robust, with a third wanting to learn *a lot*, and half wanting to learn *a little*; a low percentage indicated no interest. After the Program, the interest was maintained but not increased.

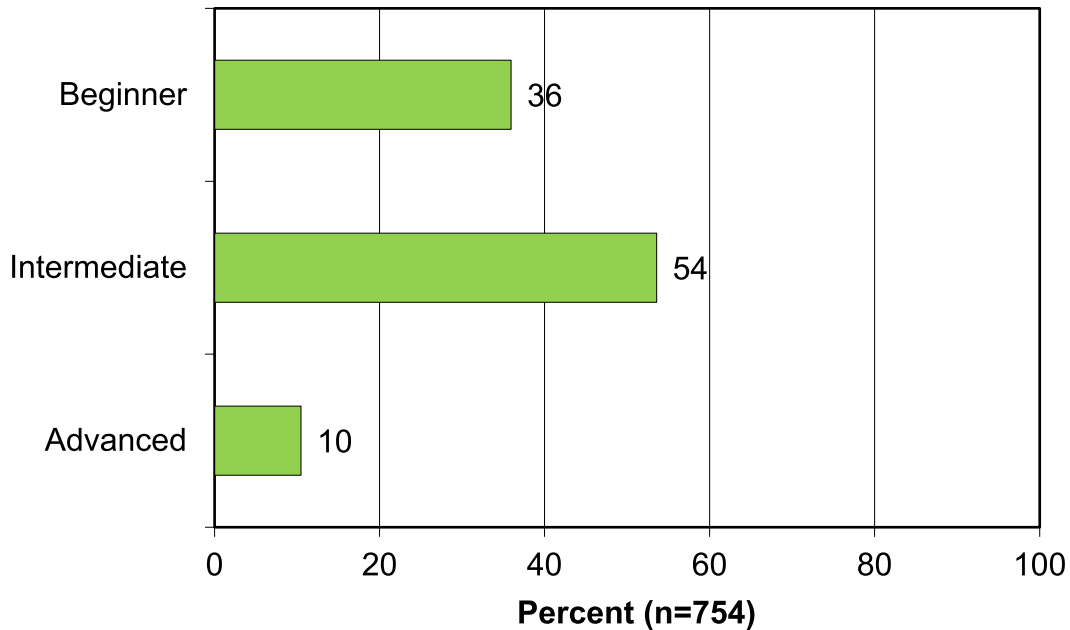

Knowledge of fishing was increased by the Program, going from 87% knowing *a lot* or *a little* to 96% being at that knowledge level. Knowing *a lot* went from 19% to 35%.

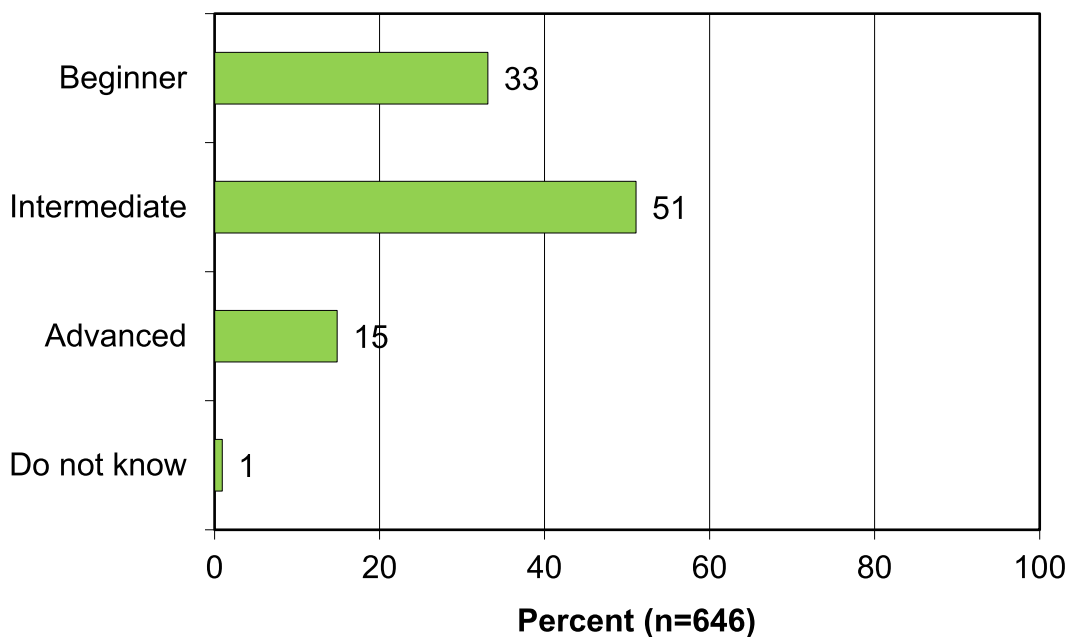

Students' perceived skill level increased slightly after the Program: 10% felt that they were *advanced* prior to the Program, and 15% thought of themselves as *advanced* after the Program.

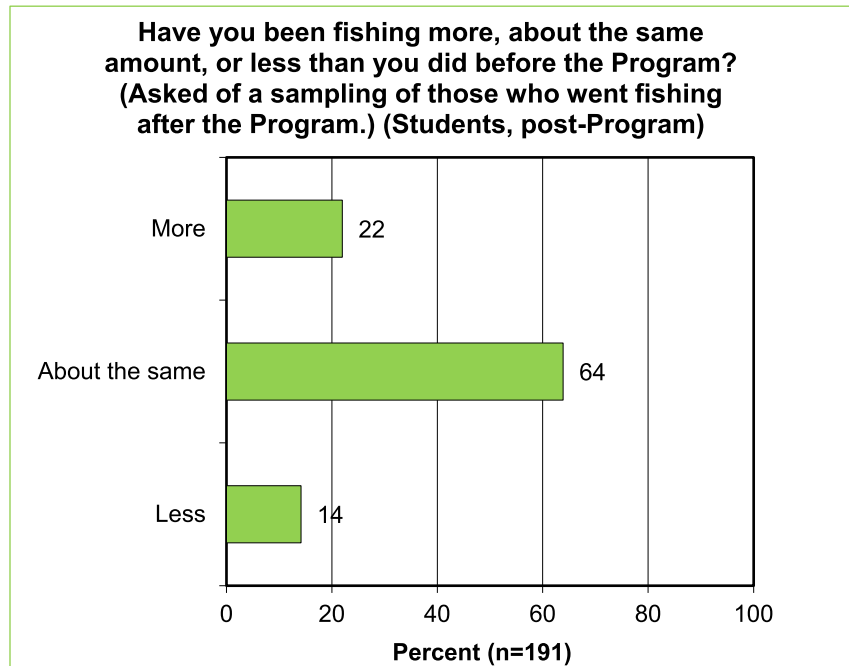

How would you rate your fishing skills? (Asked of those who have been fishing.) (Students, pre-Program)

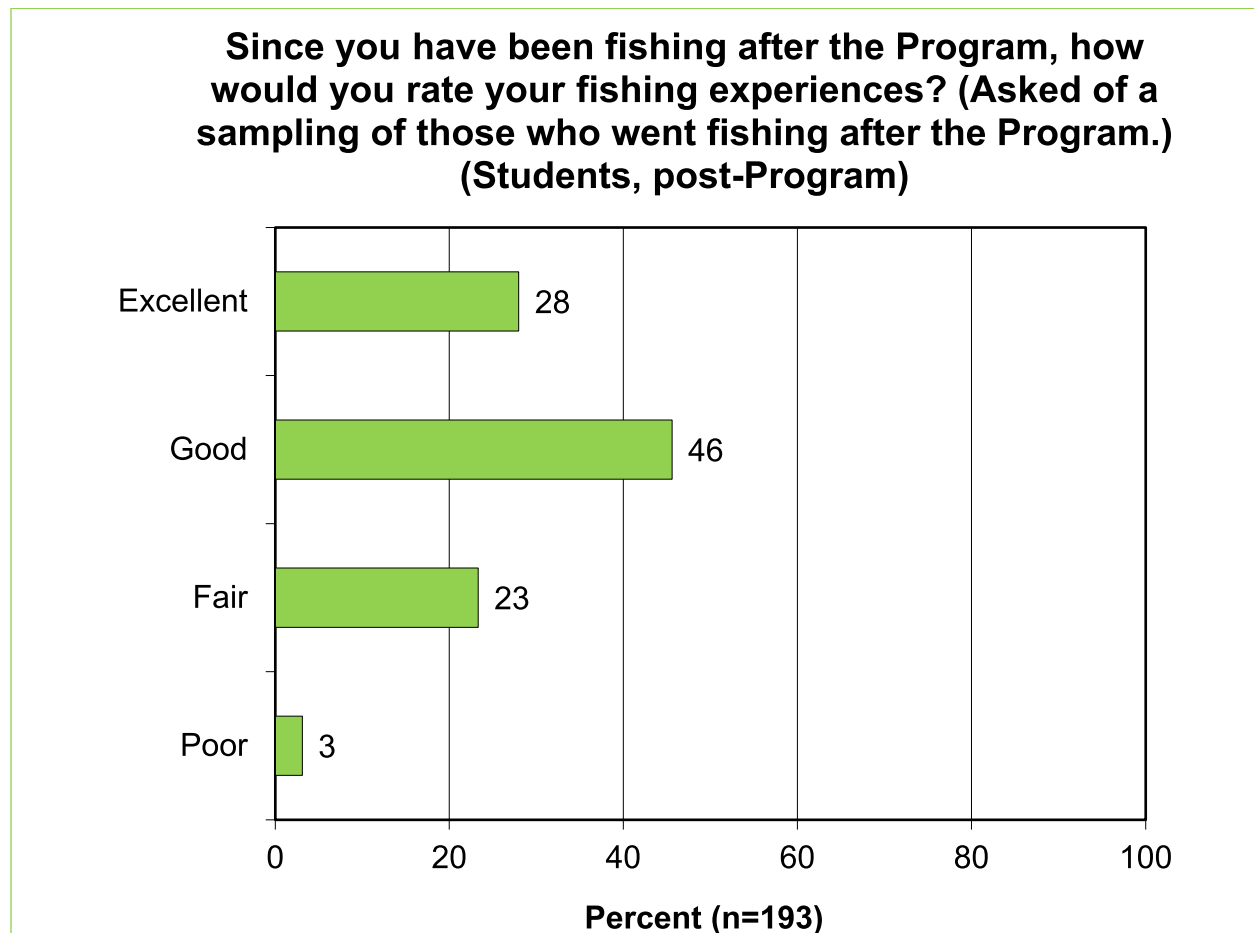

How would you rate your fishing skills now? (Students, post-Program)

Of those who fished after the Program, most felt that they fished about the same as they did before the Program. Nonetheless, a greater percentage said that they fish more (22%) than said that they fish less (14%).

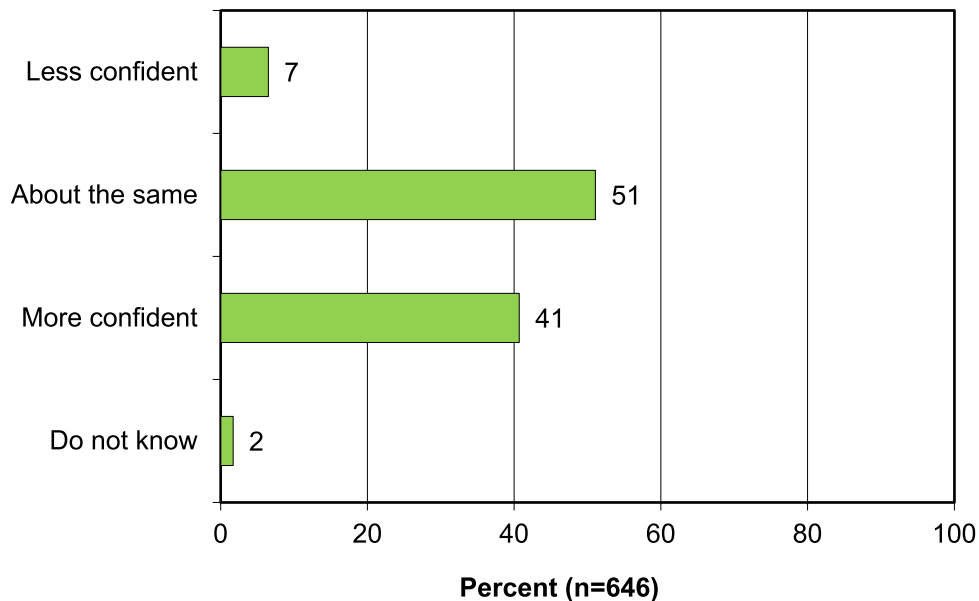

Participants' ratings of their fishing experiences after the Program are positive: 74% give a rating of *excellent* or *good*.

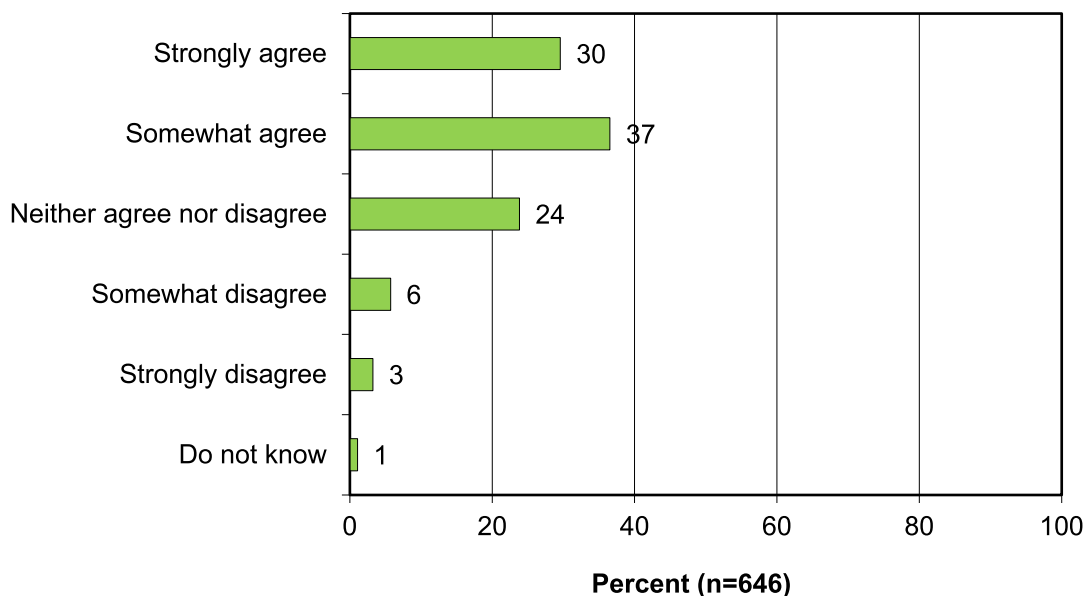

The Program boosted confidence levels in fishing, with 41% saying that they were more confident. Just over half say that their confidence level is the same. Additionally, two thirds agree that they feel prepared after the program to fish on their own or with family.

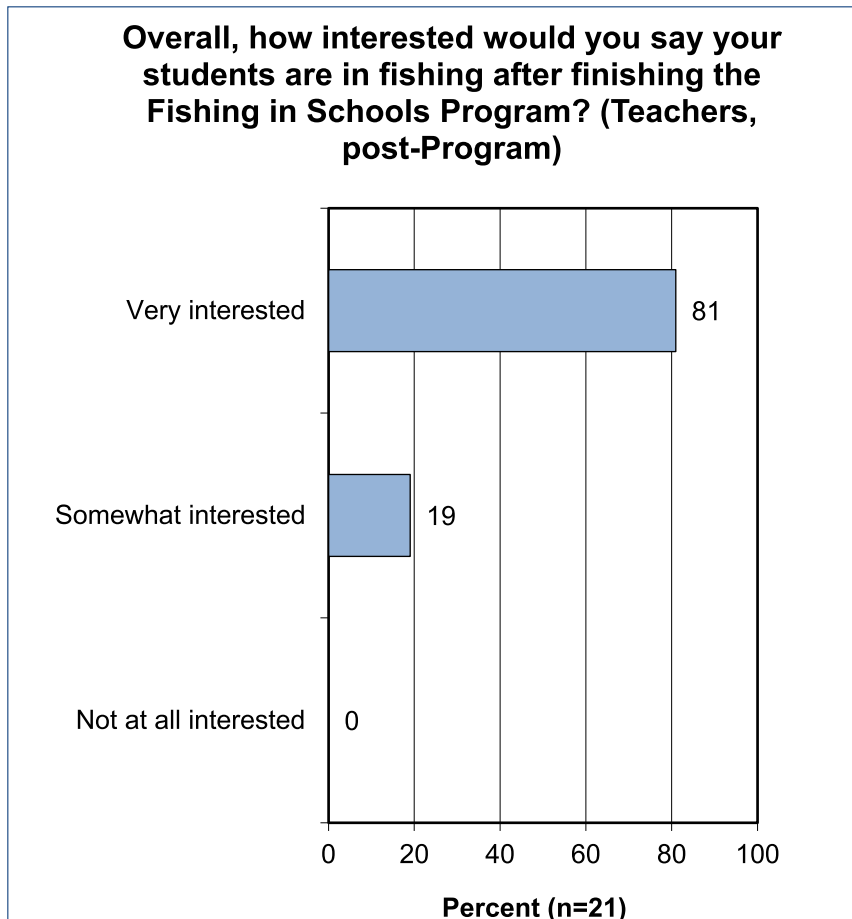

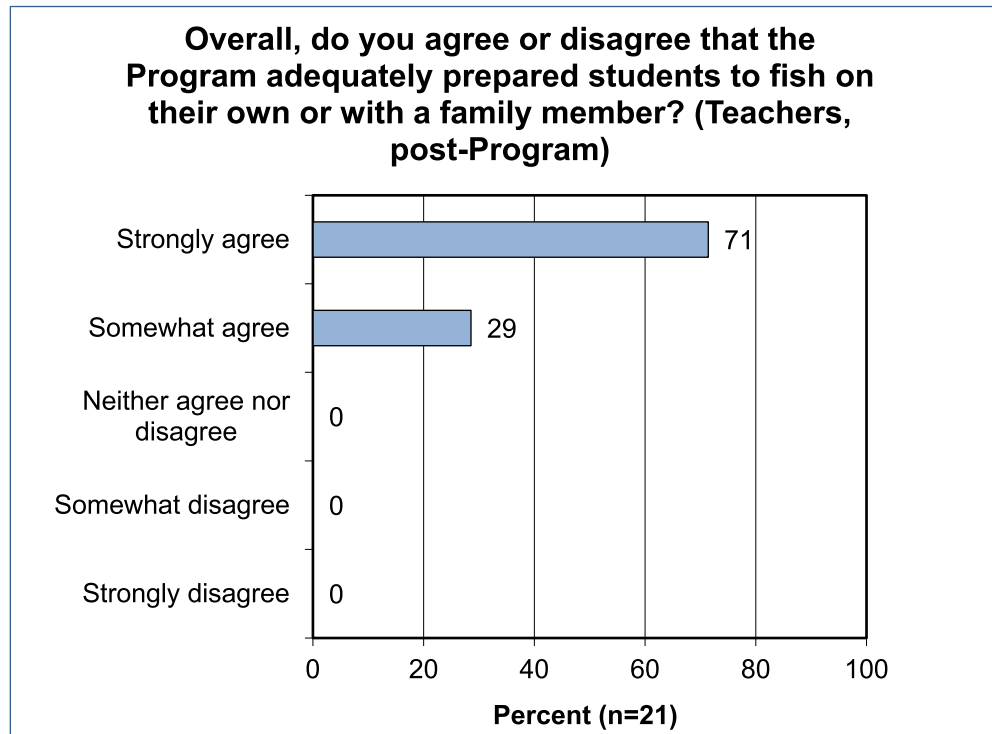

After the Fishing in Schools Program, how confident do you feel about fishing outside of school? (Students, post-Program)

Overall, do you agree or disagree that you feel prepared to fish on your own or with family now? (Students, post-Program)

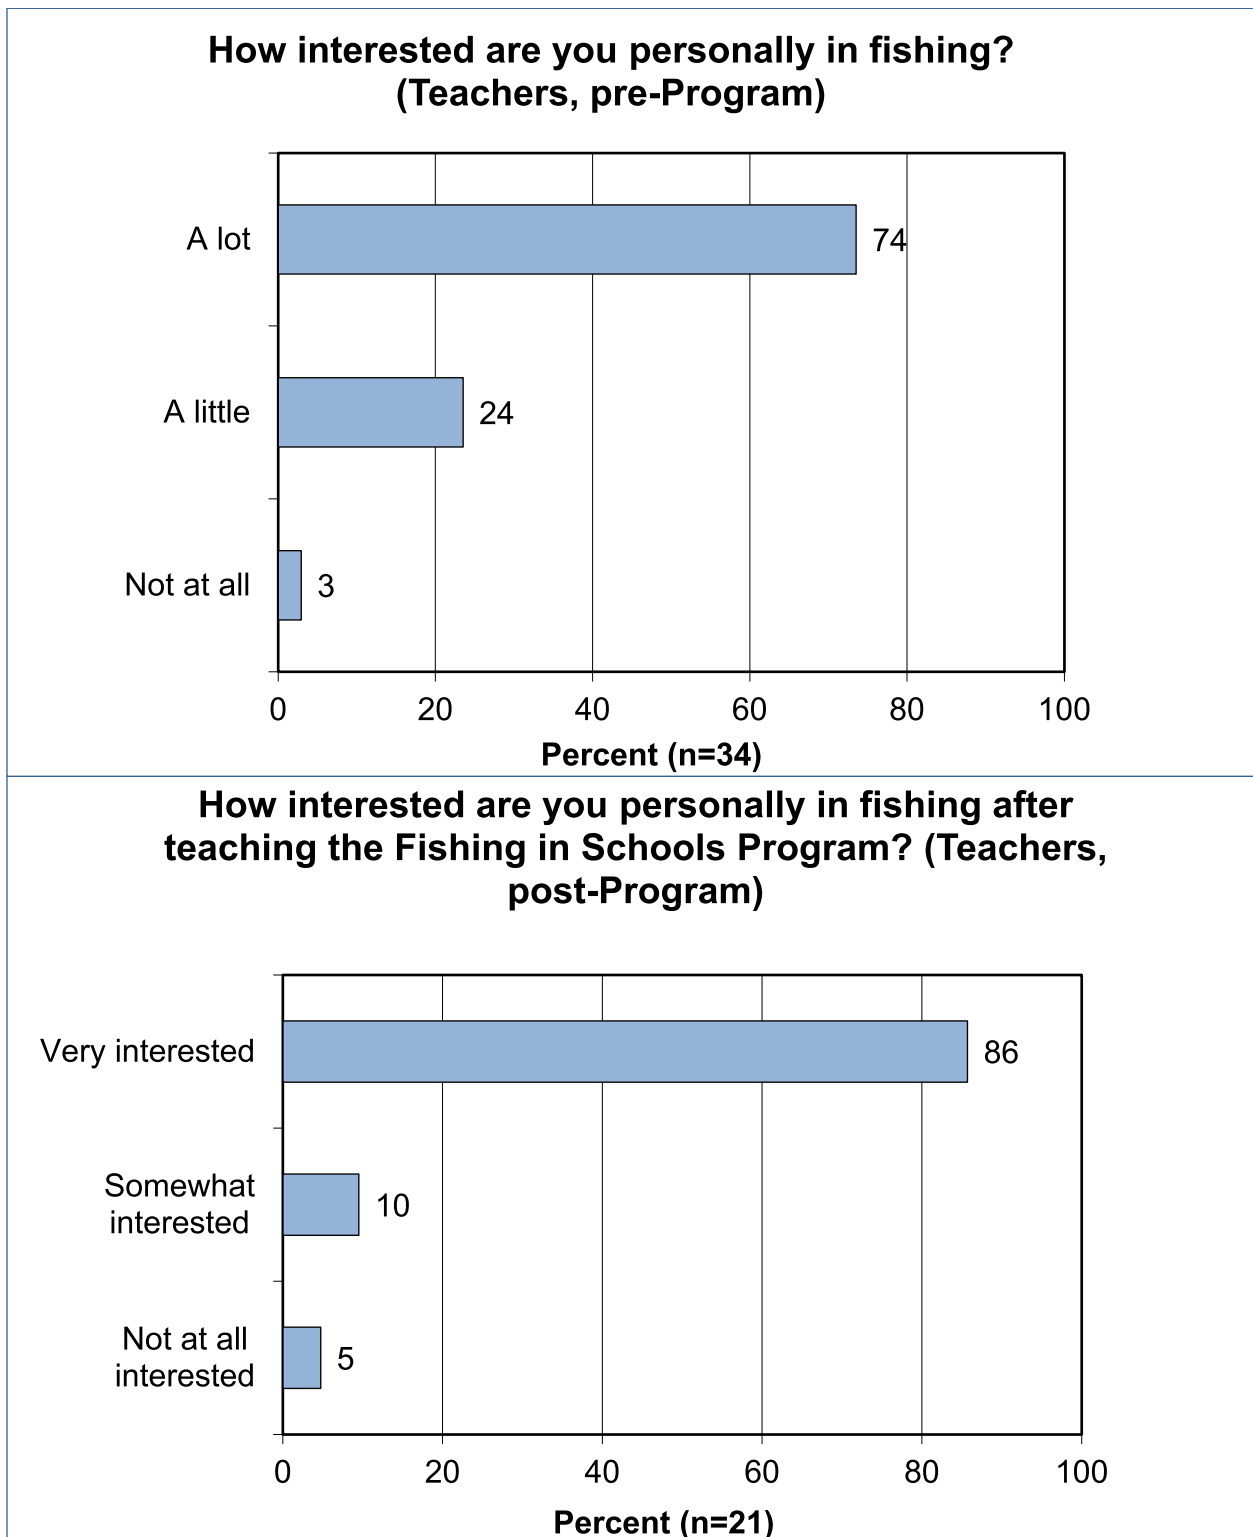

Teachers unanimously agree that the program prepared their students, including 71% who *strongly* agree that it did.

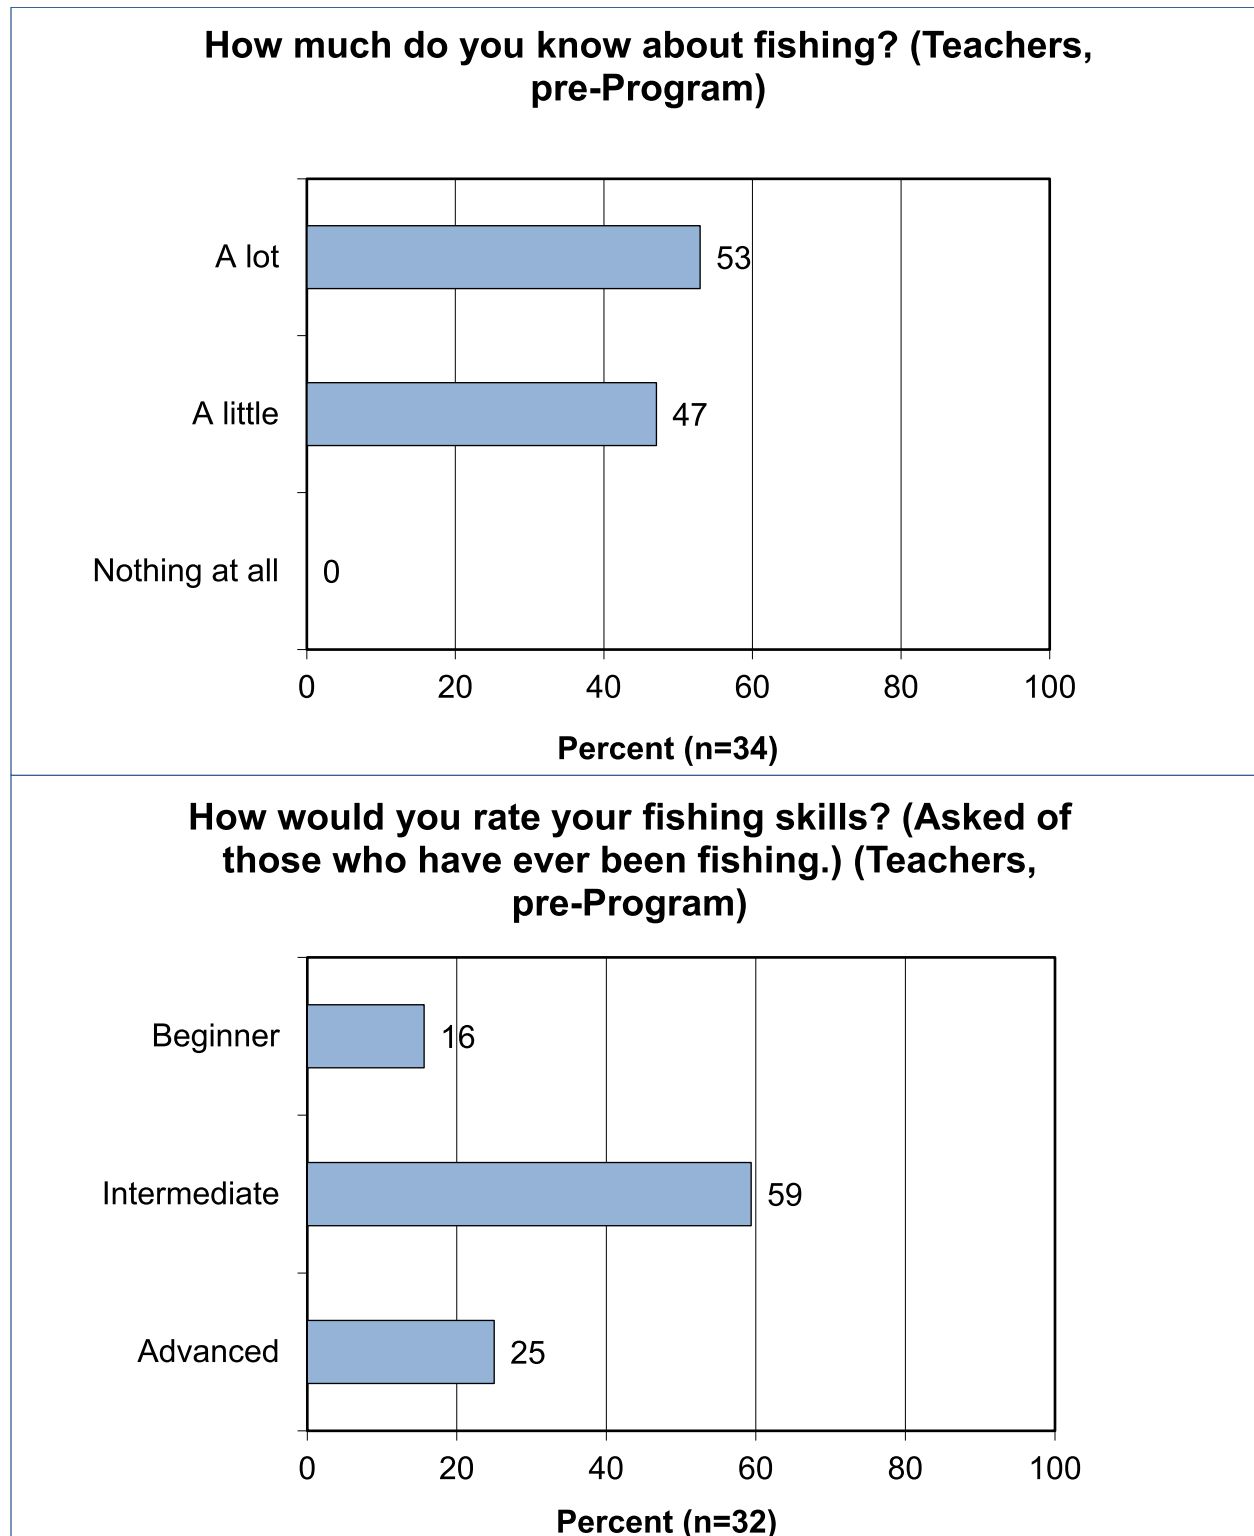

Teachers were asked about their perceptions of their students' interest in fishing after the Program. All teachers think their students are *very* or *somewhat* interested in fishing. No teachers said that their students were *not at all* interested.

Teachers' personal interest level in going fishing was slightly boosted by teaching the Program, as shown in the graphs below.

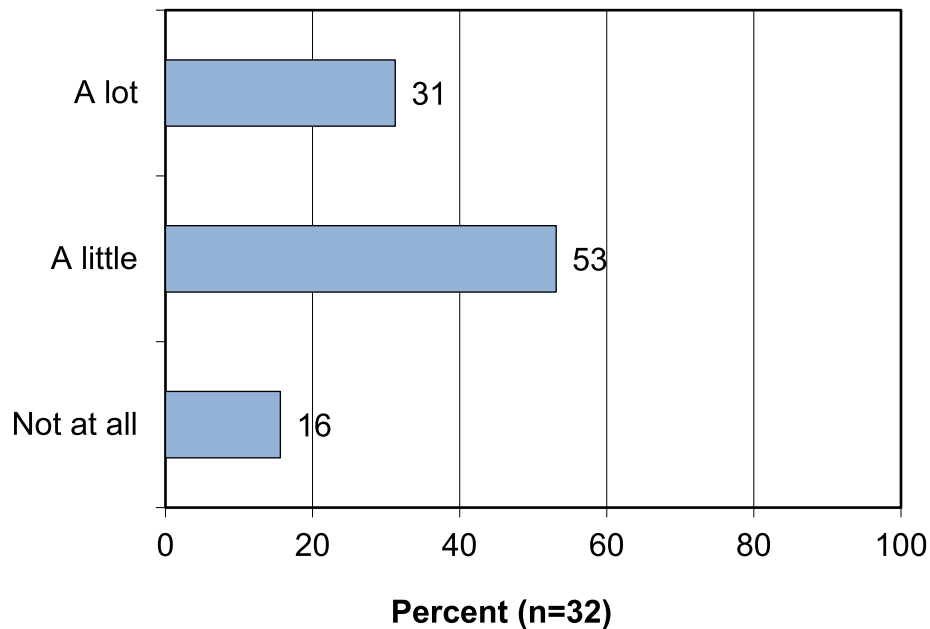

Several pre-Program questions demonstrate that not all teachers need to be proficient in fishing to teach the Program. About half only knew *a little* about fishing prior to the Program. Only a quarter of teachers considered themselves *advanced* prior to the Program.

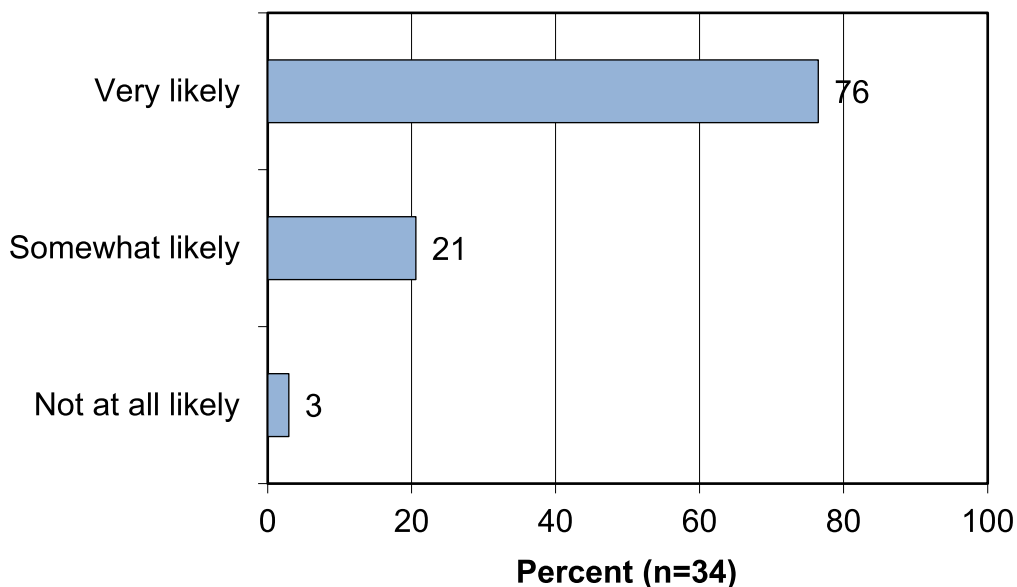

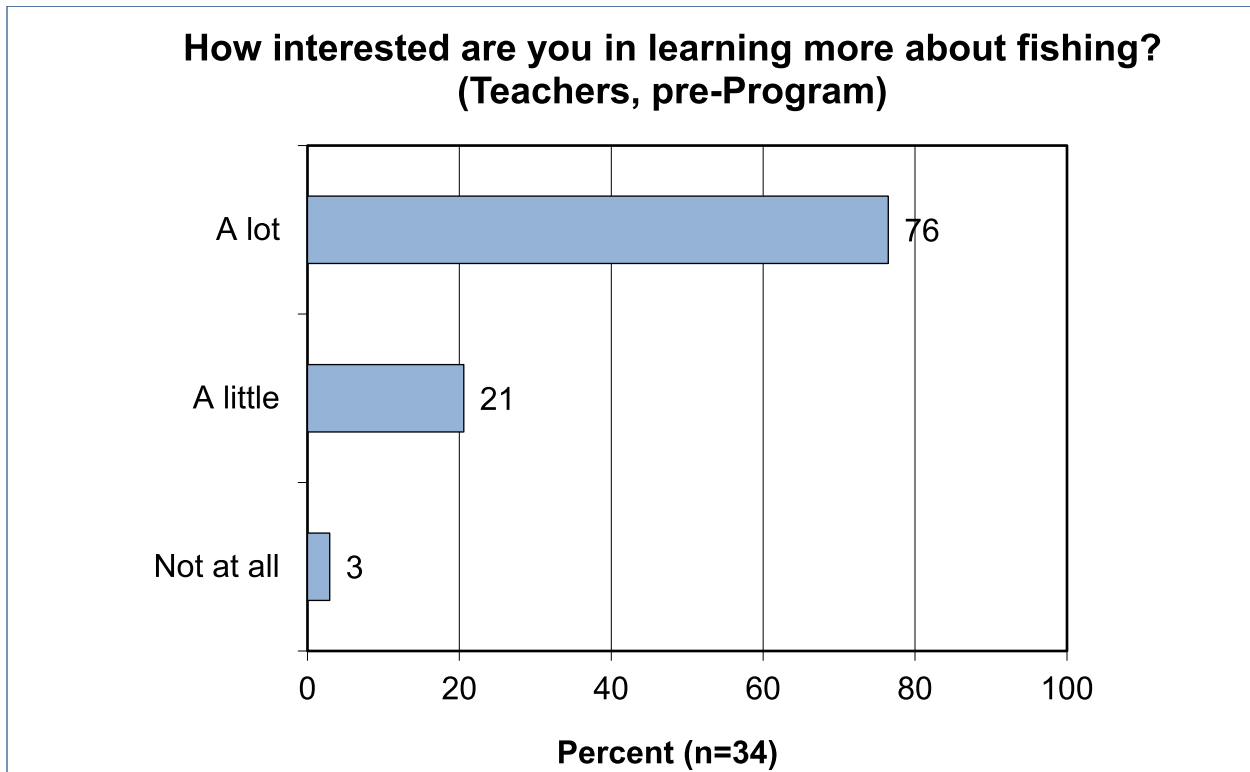

Likewise, only about a third of teachers indicated that they fished *a lot* prior to the Program. Indeed, 16% did not fish at all prior to the Program. Nonetheless, most teachers indicated being likely to fish in the following year, and nearly all expressed interest in learning more about fishing (following page).

How much do you fish now? (Asked of those who have ever been fishing.) (Teachers, pre-Program)

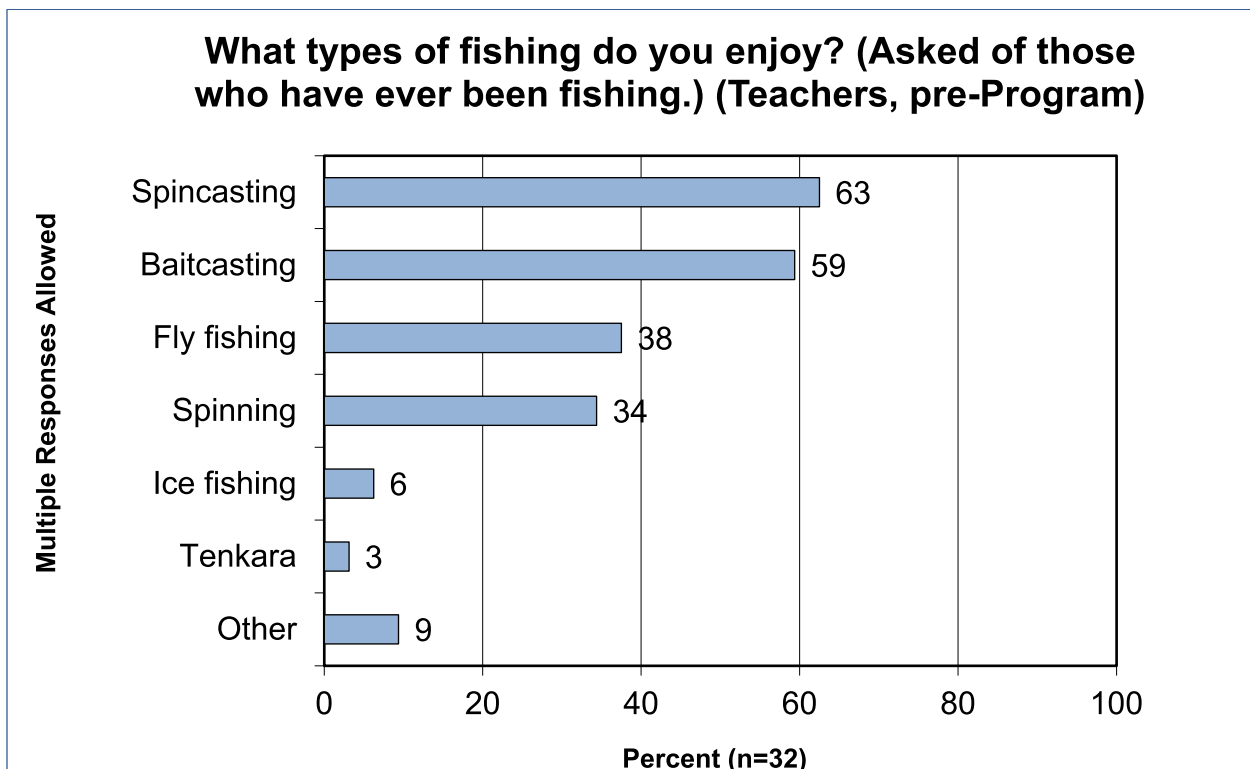

Not including the Fishing in the Schools Program, how likely are you to go fishing in the next year? (Teachers, pre-Program)

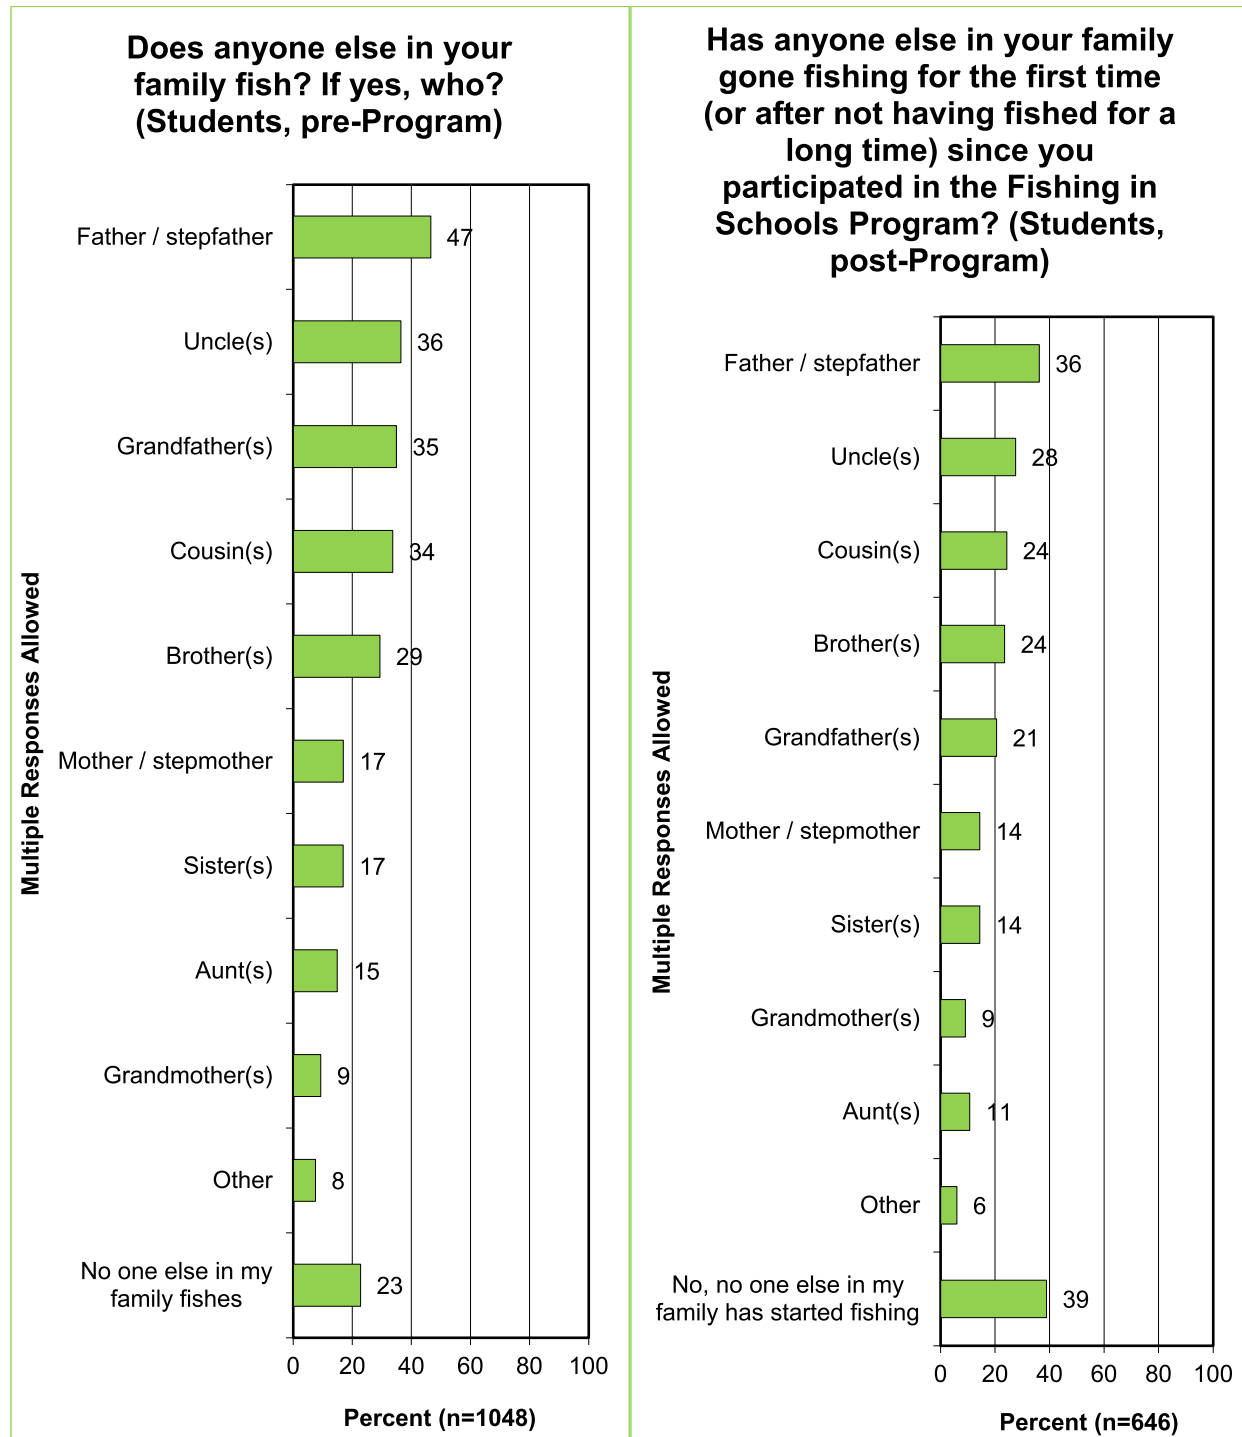

Of those teachers who had gone fishing prior to the Program, their favored types of fishing were spincasting and baitcasting.

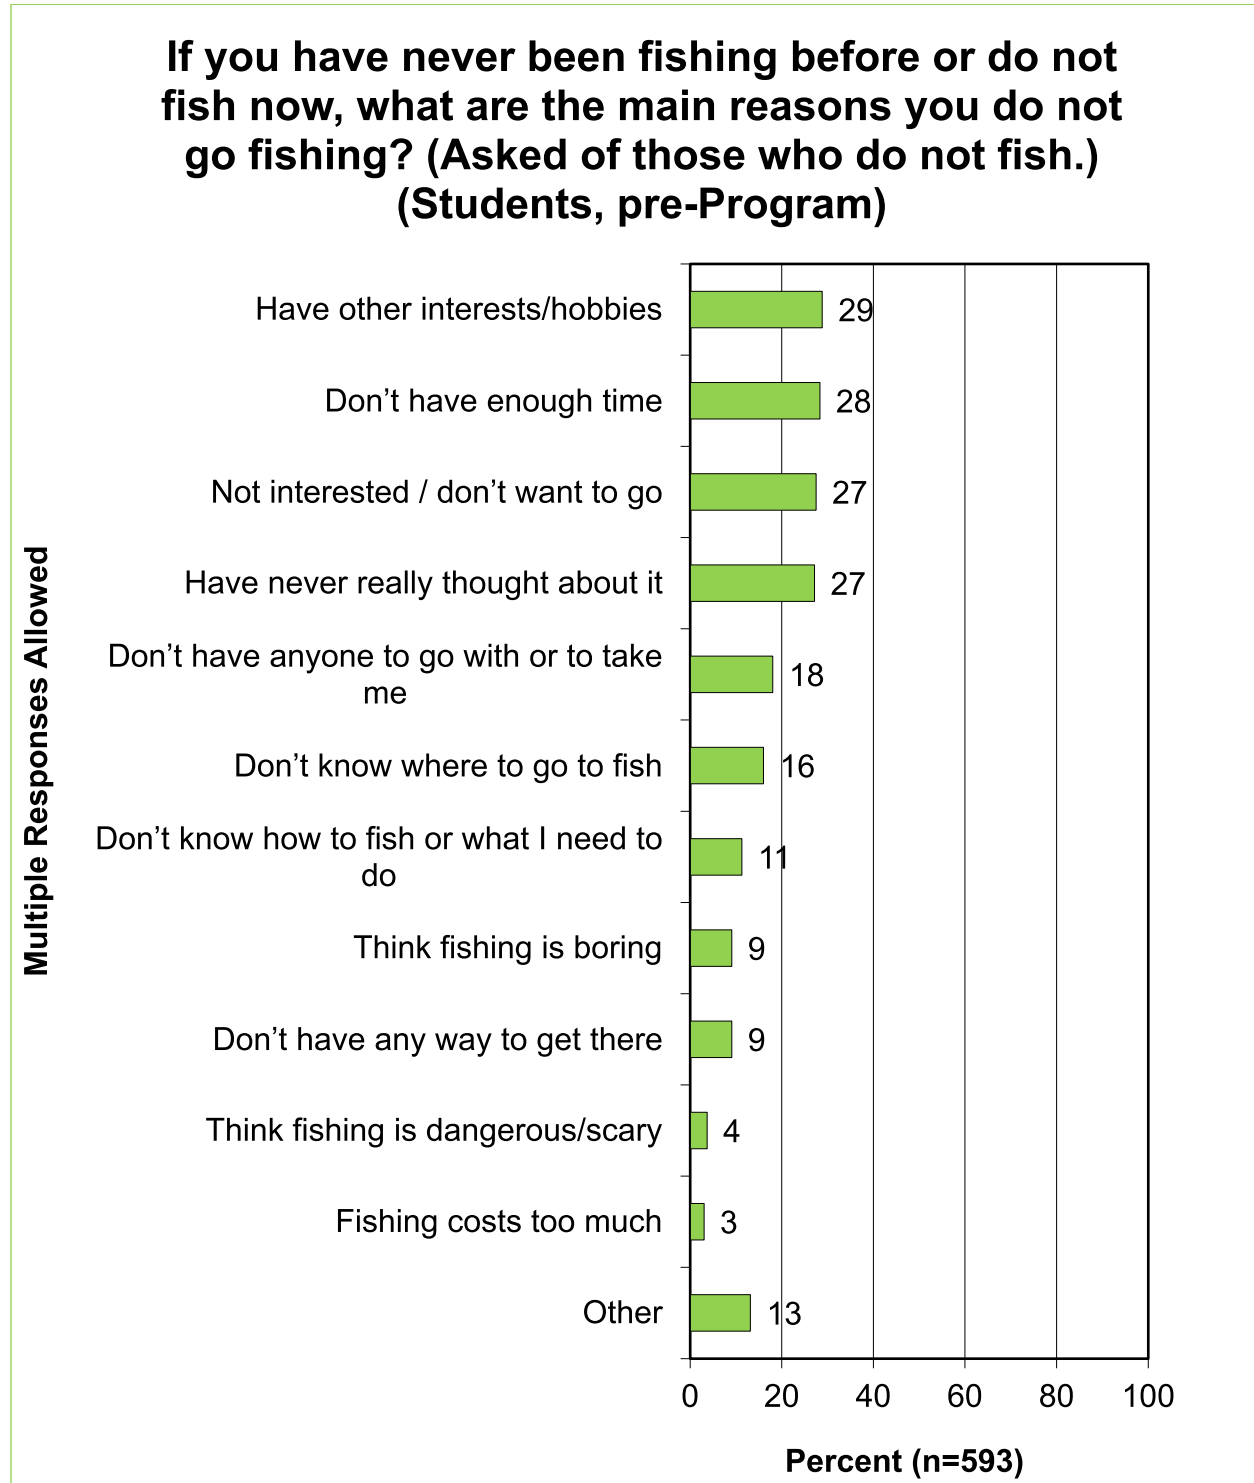

A final aspect of the fishing explored in the Program concerns fishing companions. Prior to the Program, students were asked about others in their family who fished, with male upper generation members predominant (fathers, uncles, grandfathers). After the Program, the survey asked if any members had gone fishing for the first time or been reactivated after a lapse. Again, fathers and uncles top the list. It would appear, based on that graph, that the Program encouraged others to fish who had not personally been in the Program.

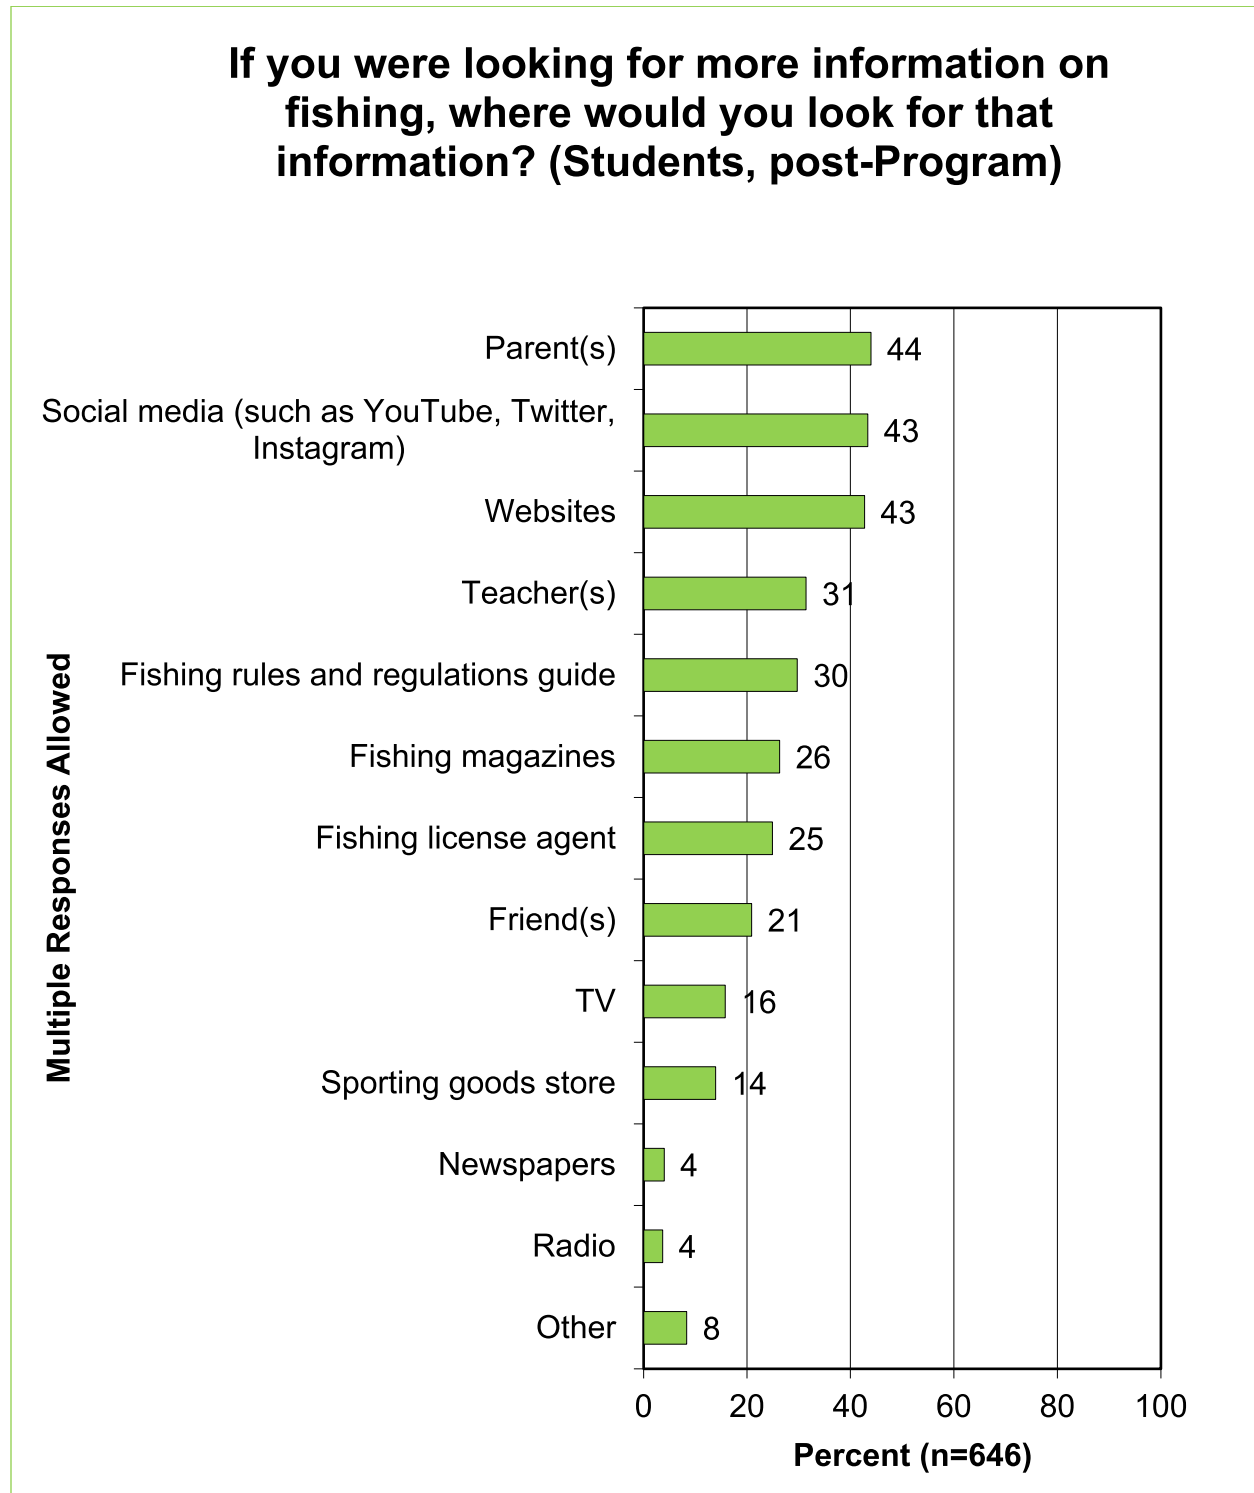

CONSTRAINTS TO FISHING PARTICIPATION

Lack of time (including no time because of other hobbies) and lack of interest account for the top four constraints to fishing participation that were named by students.

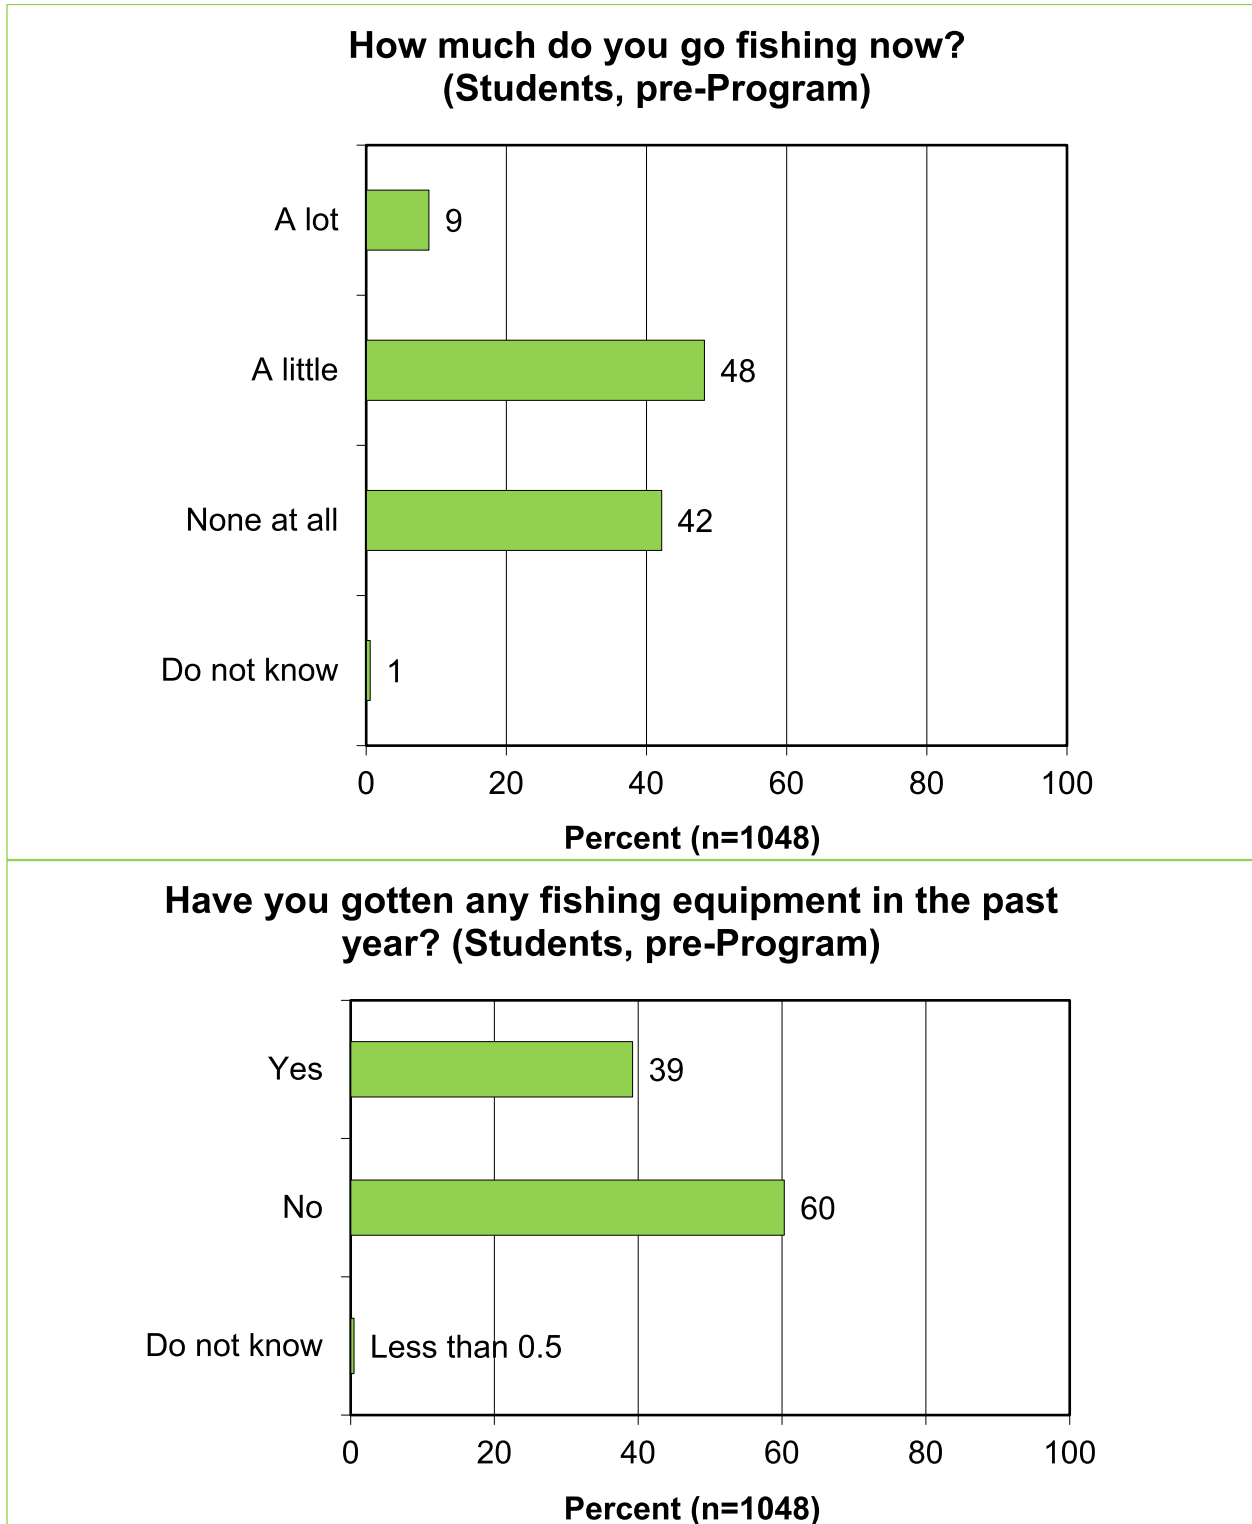

SOURCES OF INFORMATION ON FISHING

Parents are the top source of students' information about fishing, but social media and websites in general are close behind. Teachers are also high on the list.

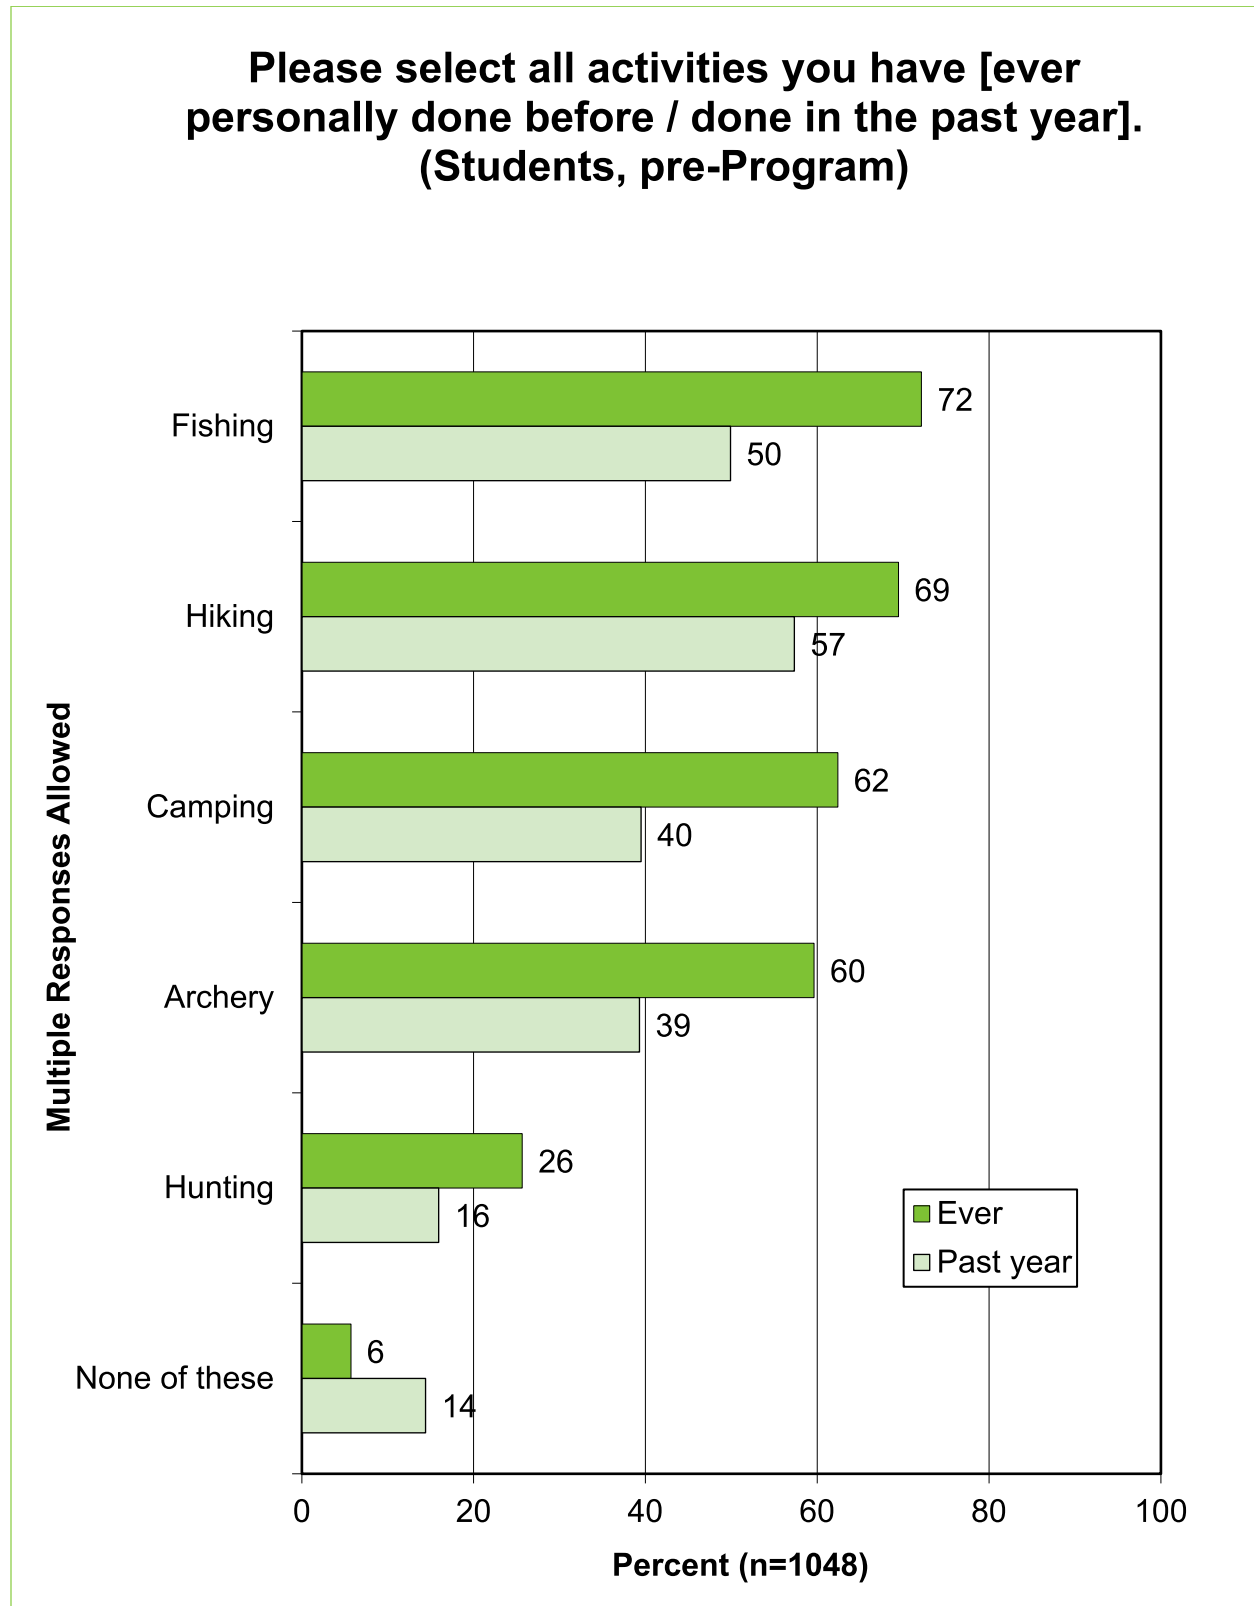

PARTICIPATION IN ACTIVITIES

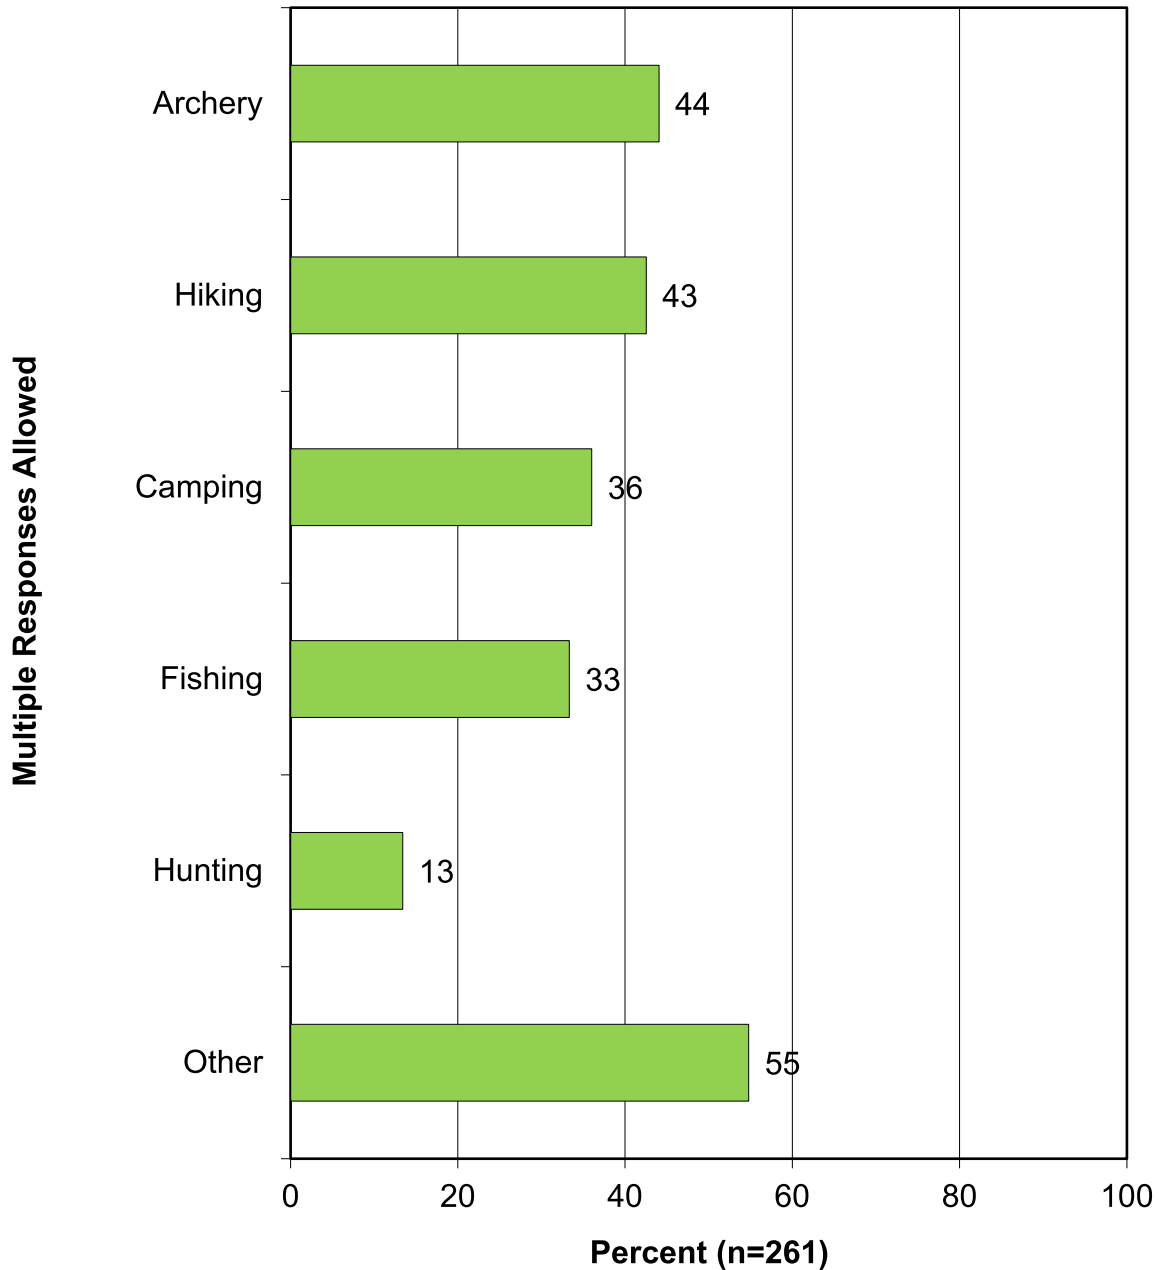

A little more than half of students indicated some fishing participation prior to the Program. Somewhat less than half got fishing equipment within the year previous to the Program. It is unknown what percentage of them, if any, got equipment specifically in anticipation of the Program.

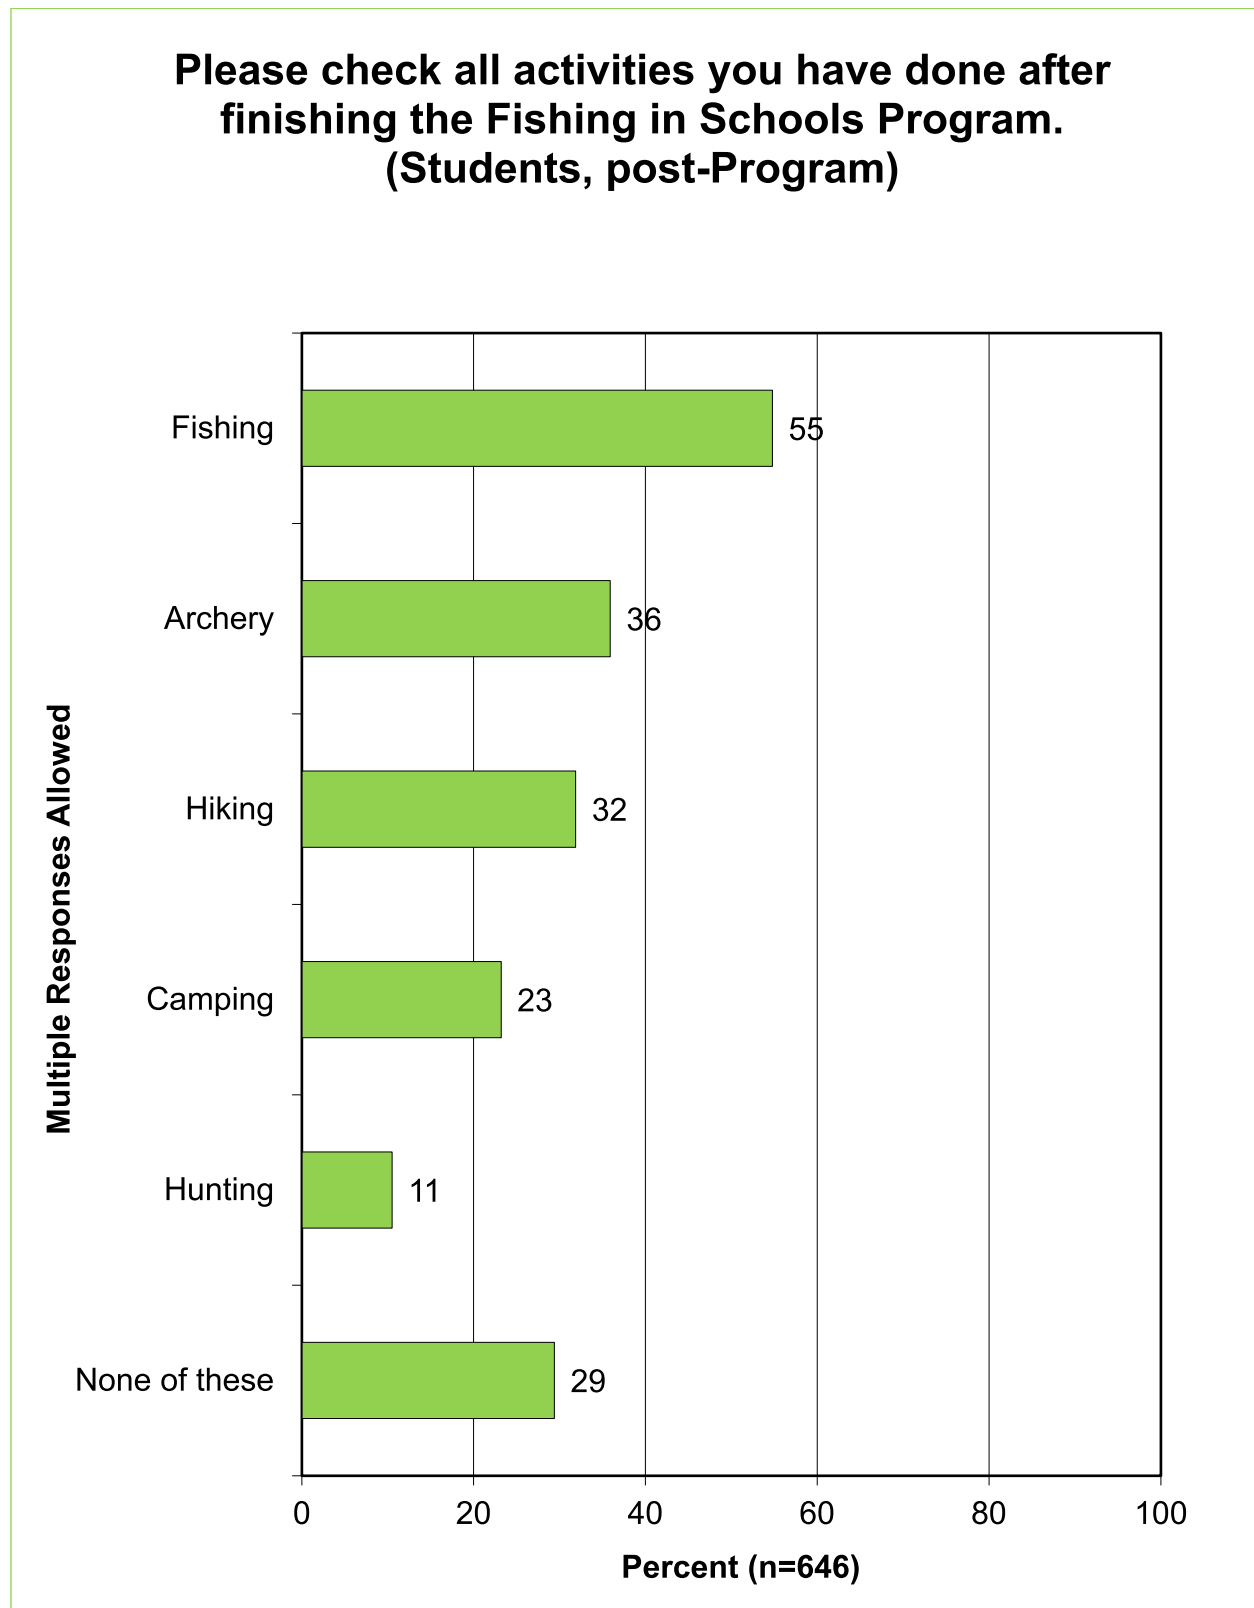

All of the students were fairly active in outdoor recreation prior to the Program. Club activities are shown on the following page, as well.

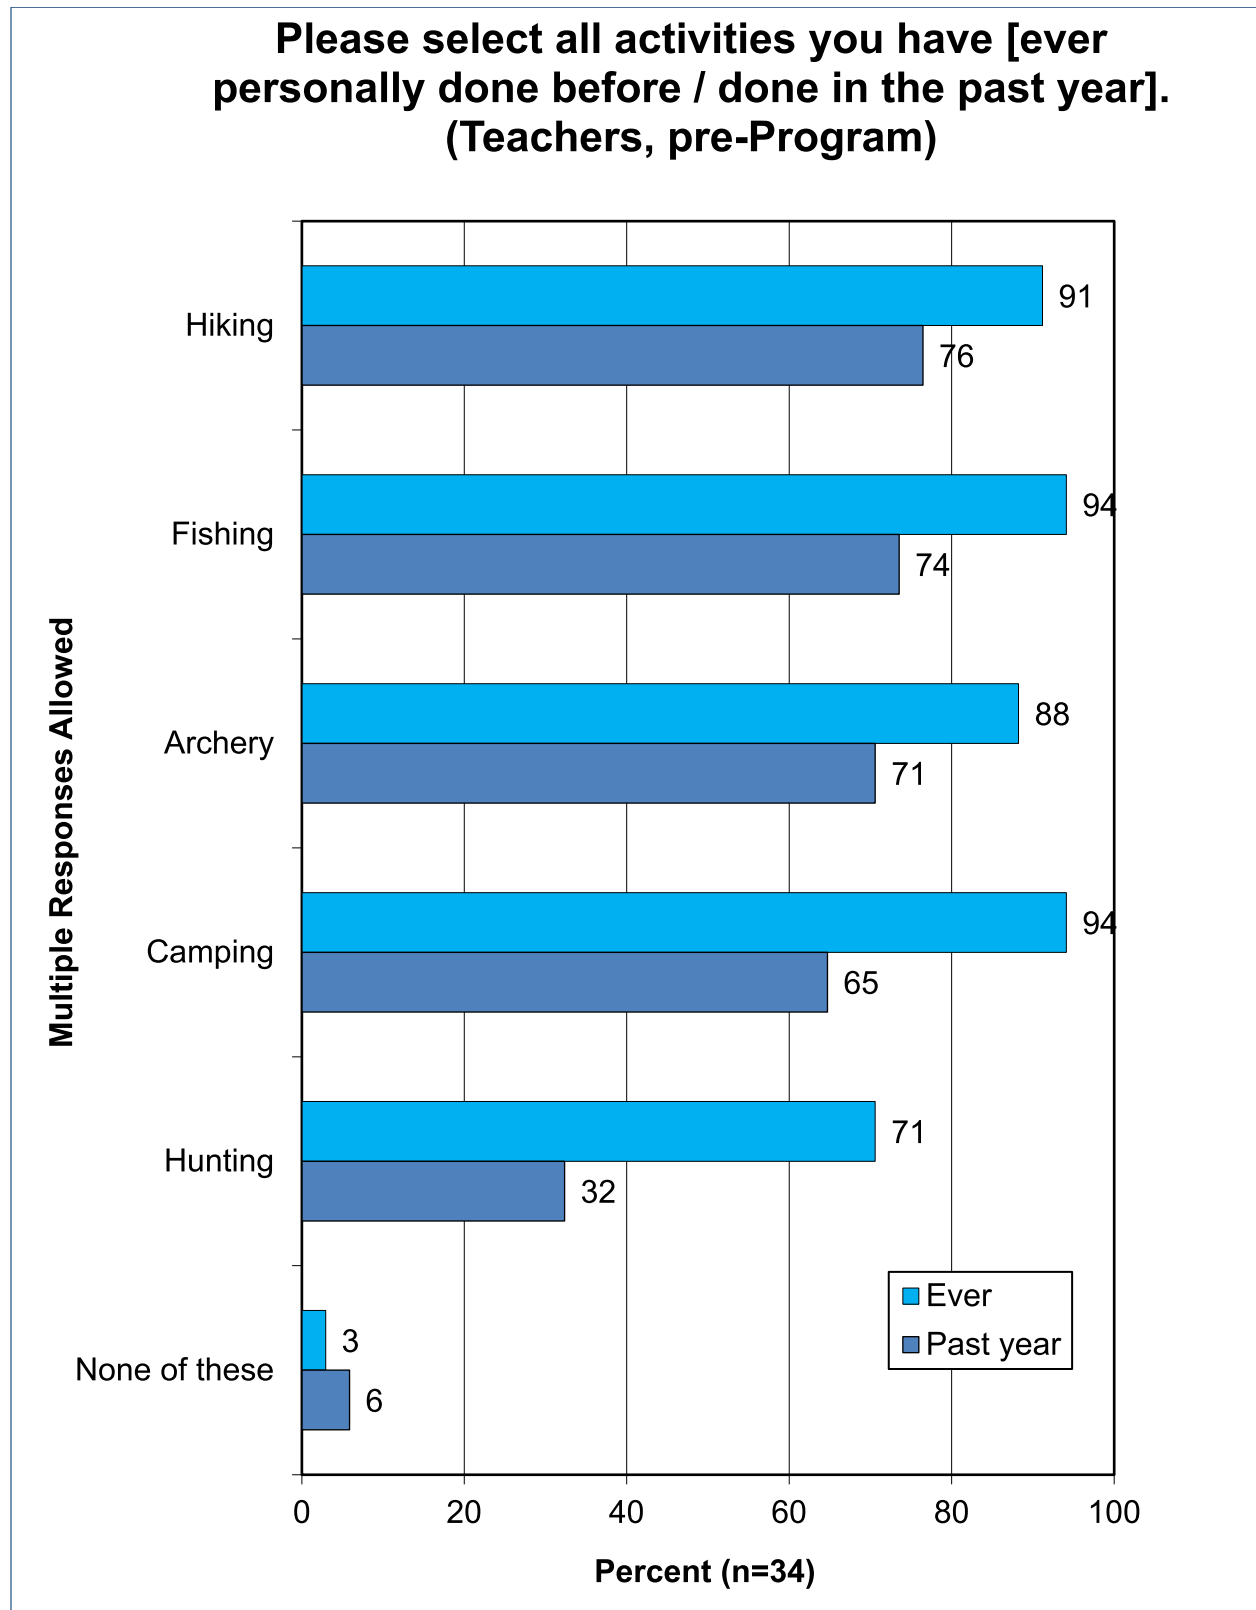

**Please check all the activities your clubs do.
(Asked of those who belong to a club that does
outdoor activities.) (Students, pre-Program)**

Students' activity levels are fairly robust after the Program, as well. In particular, fishing participation is relatively high, with just over half of students going fishing after the Program.

The teachers were also active in the outdoors prior to the Program.

Finally in this section are the results of open-ended questions in which students were asked to name their three favorite activities they like to do when they are not in school and then their three favorite outdoor activities.

WILDLIFE VALUES

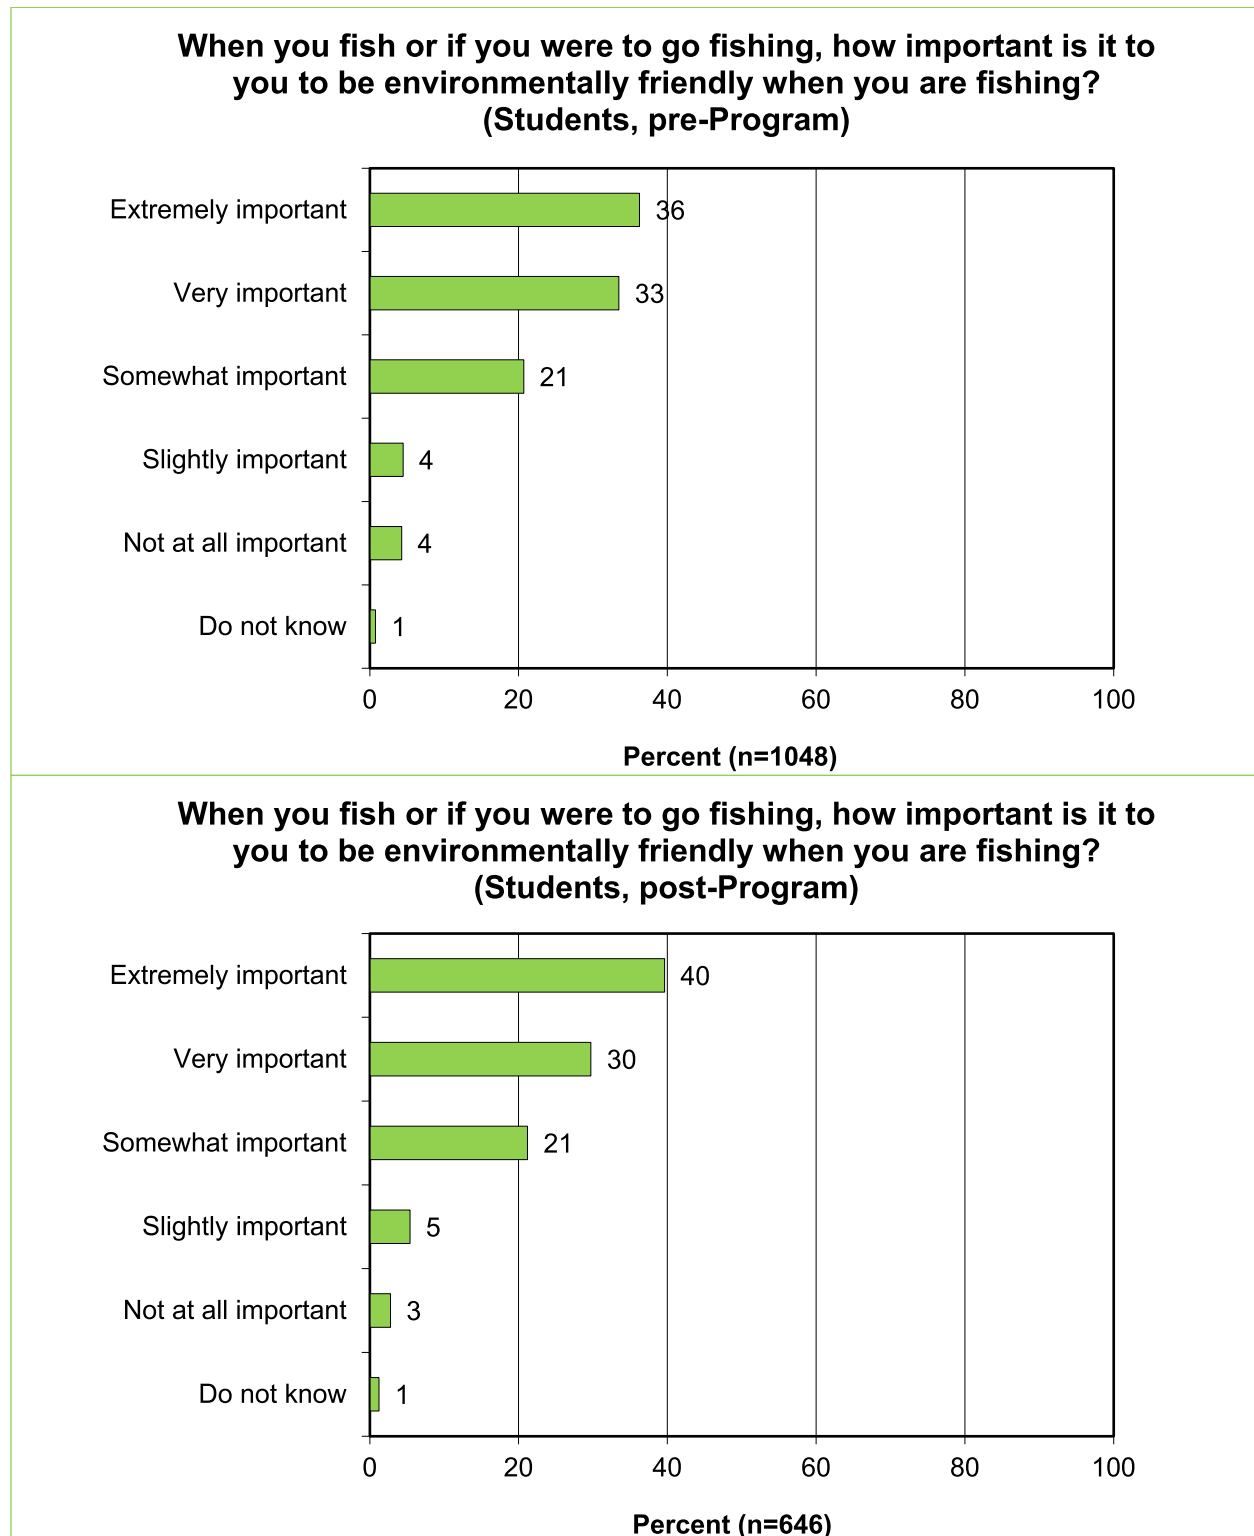

The Program stimulated concern about having natural areas available for outdoor recreation. Before the Program, 28% of students felt that this was *extremely* important, and this percentage rose after the Program to 35%.

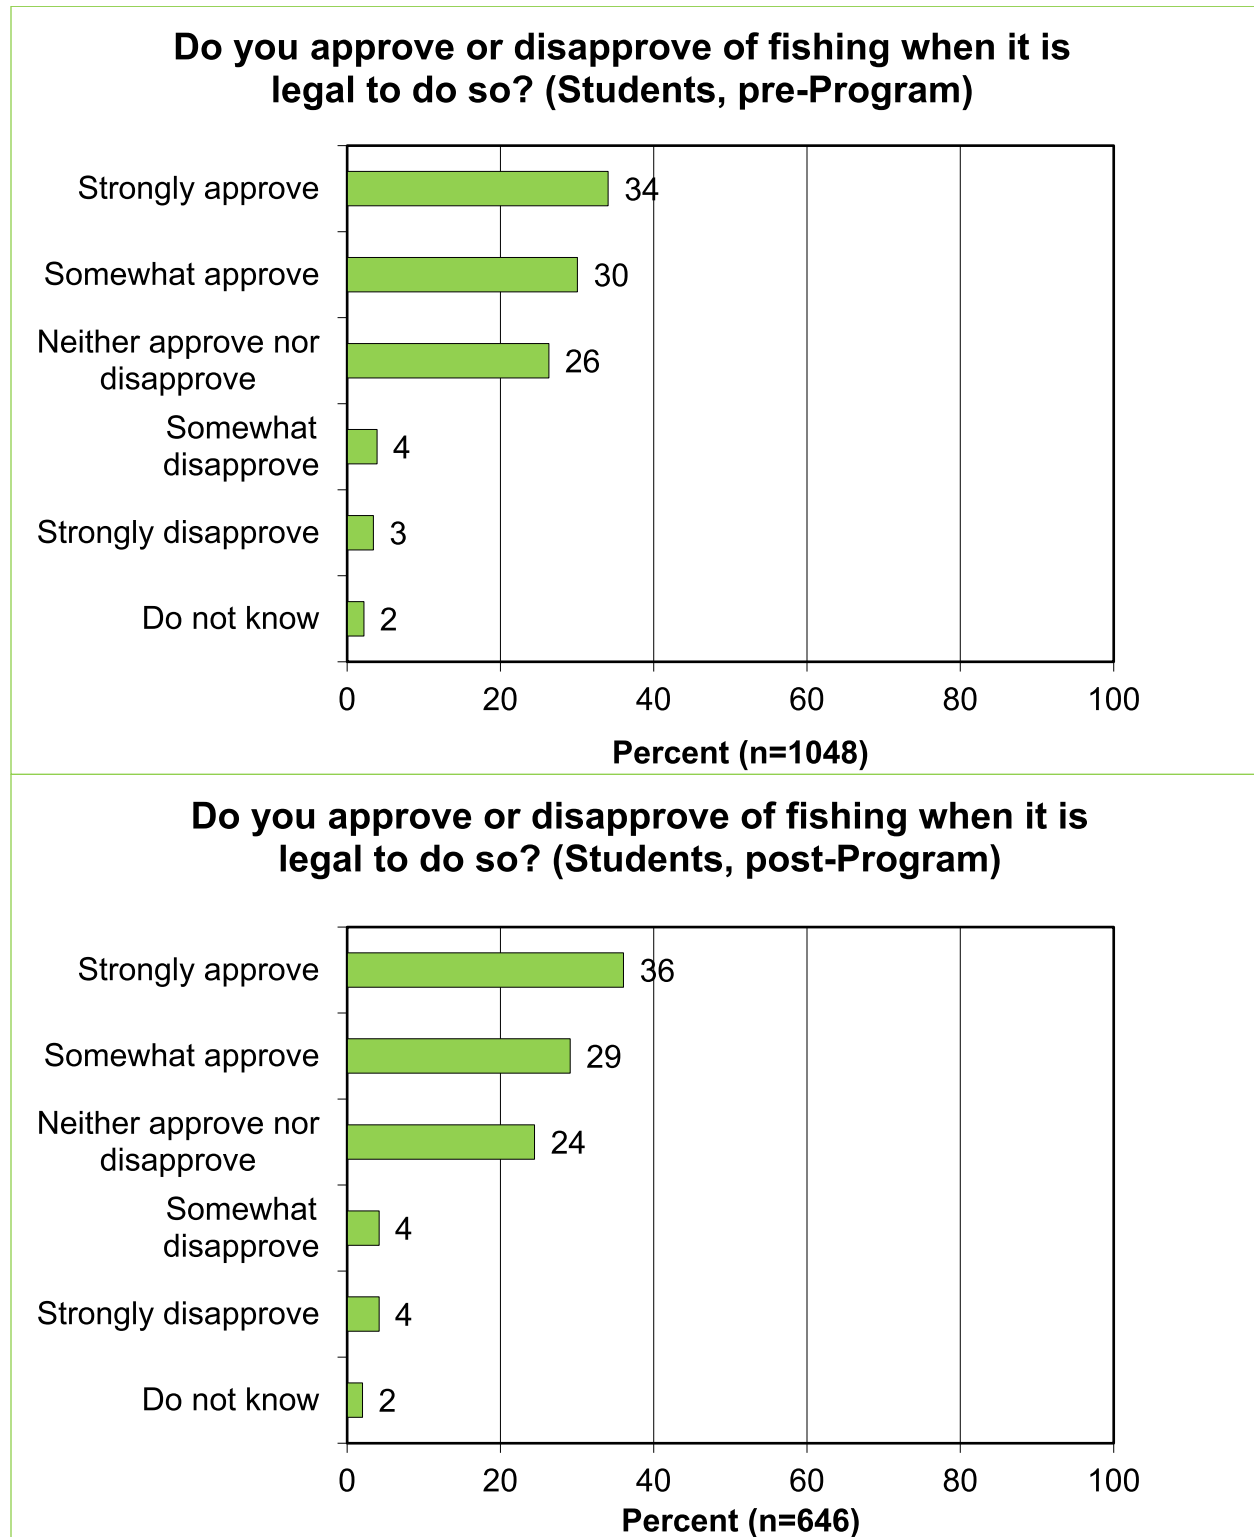

Likewise, 39% of students prior to the Program felt that it was *extremely* important that fish and wild animals are taken care of along with their habitats. After the Program, 43% felt that this was *extremely* important.

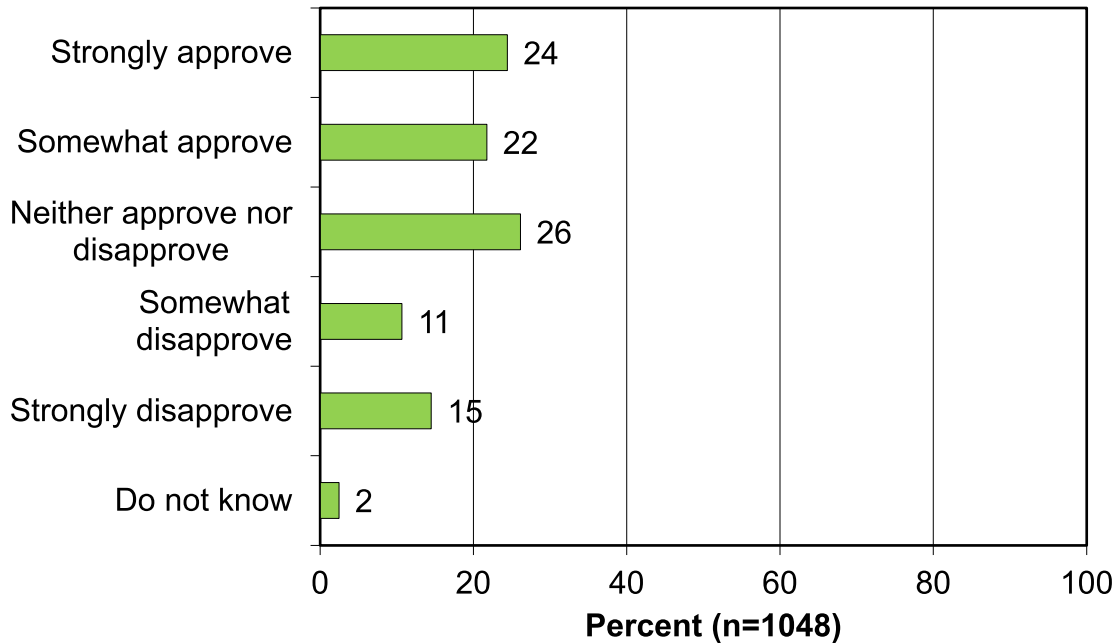

Being environmentally friendly when fishing also rose in importance after the Program. Before the Program, 36% of students felt that this was *extremely* important, compared to 40% after they had taken the Program.

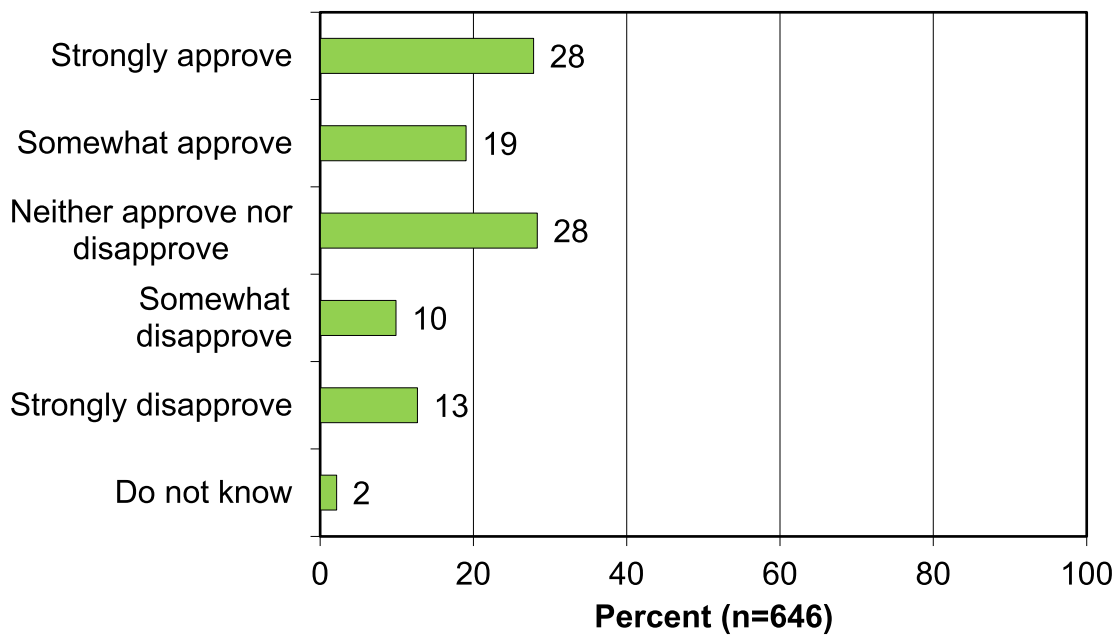

Approval of fishing remained about the same after the Program. Likewise, approval of hunting did not markedly change after the Program (following page).

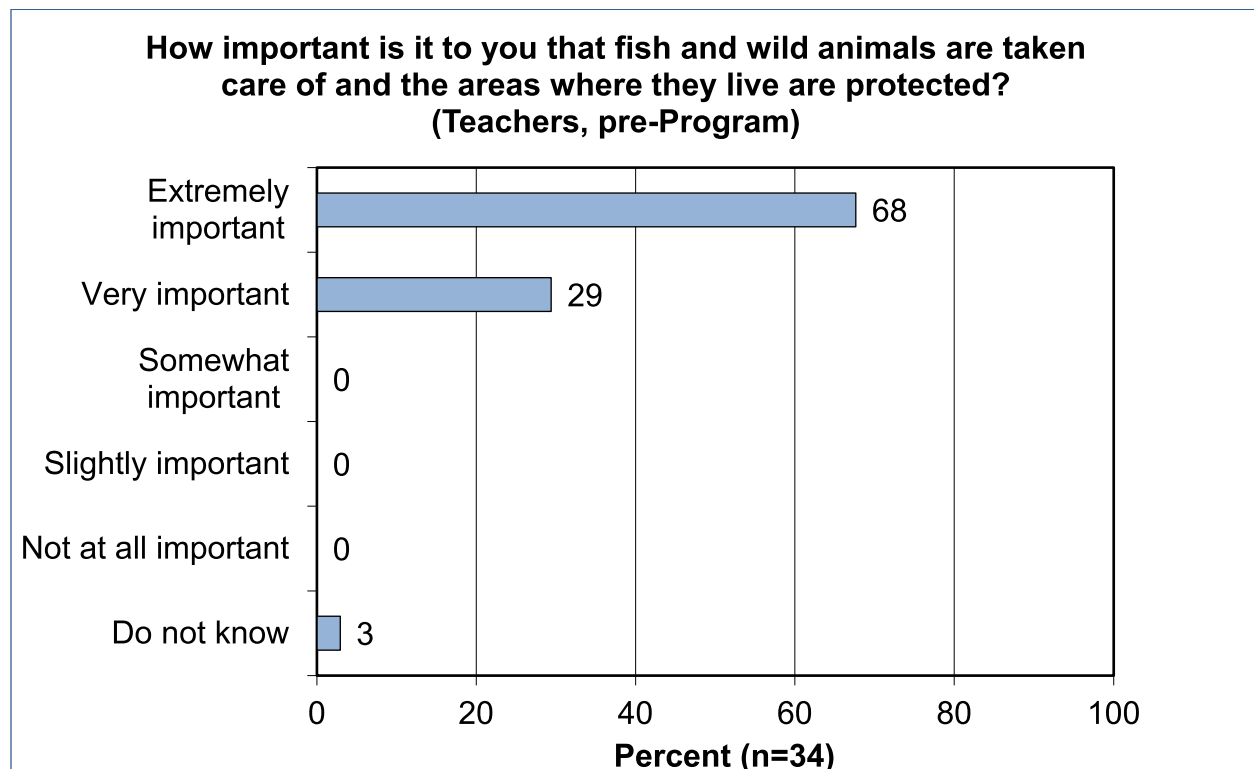

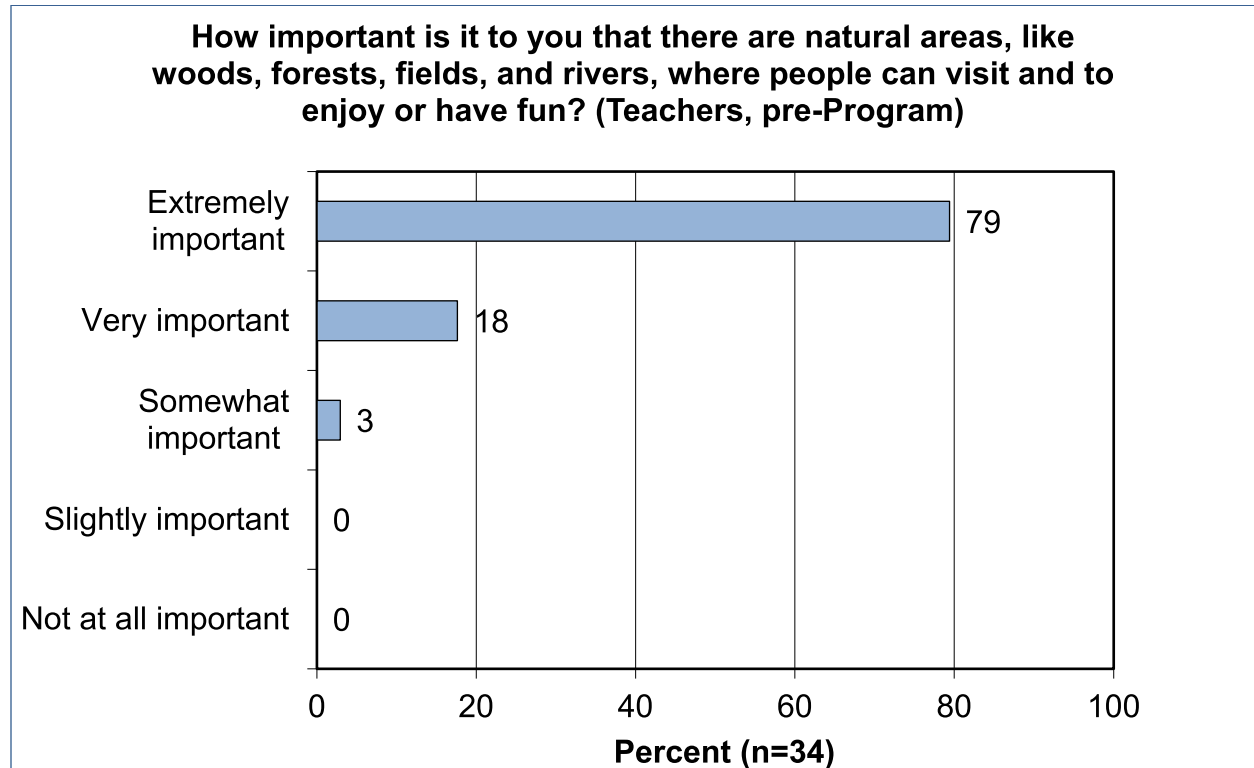

Do you approve or disapprove of hunting when it is legal to do so? (Students, pre-Program)

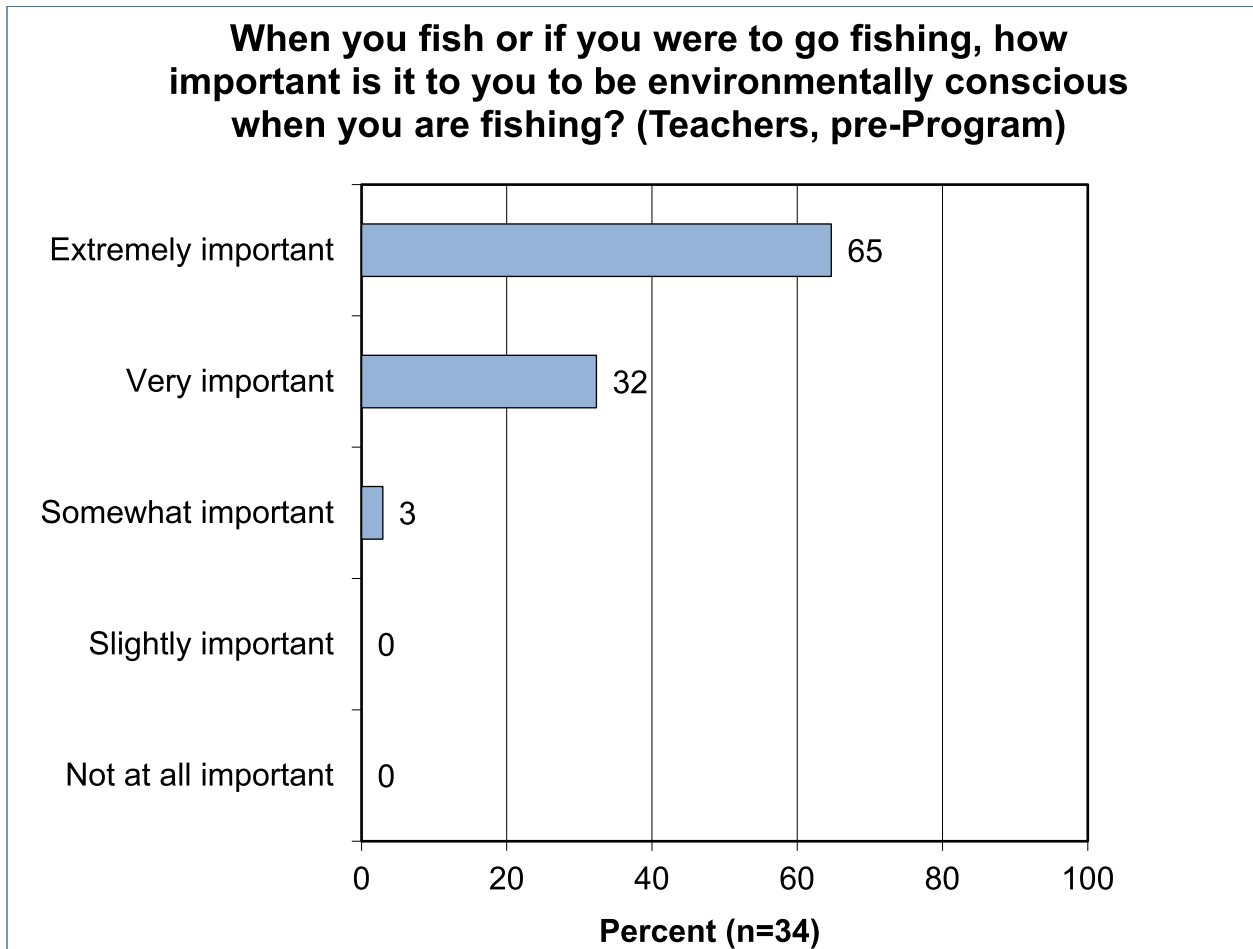

Do you approve or disapprove of hunting when it is legal to do so? (Students, post-Program)

Teachers, prior to the Program, were asked about the importance that there are natural areas for recreation, that fish and wildlife are taken care of, and that they be environmentally friendly when they fish. On all, large majorities of teachers think them to be *extremely* important.

END COMMENTS

The end of the survey provided space for any further thoughts to be provided. Teachers' comments are tabulated below.

We would love to hear your thoughts! Please share any additional comments, thoughts, suggestions, or ideas you have about the Fishing in Schools program in the text box provided below. (Teachers, post-Program)
I don't have any helpful suggestions at this time, but I would like to express that my students enjoyed the experience and that we will build on what lessons that we completed for next year.
We absolutely loved the program. I think having more of the bean bag fish would be very valuable. That was the students favorite part. I contacted TWRA and We concluded our unit with a visit from three TWRA officers. They spend the day with the children talking about boating safety, fishing and other wildlife information. They gave each students a Identification book to all the fish found in Tennessee. This was a perfect take home for the students to conclude the unit. I would love to have fishing equipment to hand out to our students. I contacted our local Rural King and Walmart to ask for a donation but no success so far. I think it would be a great way to keep students engaged in fishing if they have a chance to own their own equipment. Thank you so much for proving such an amazing and fun curriculum and most importantly ALL the supplies needed.
I thought the program was great. I'm looking to forward to teaching it again next year. I feel like I will be much better with the pacing of each lesson in year 2. The couple lessons that I didn't fully get to was due to our classes only being 30 minutes.
We loved our first year of NFSP. I wouldn't change much about the program. Very easy to follow and the kids were very engaged. I will have my students keep a small binder with all they learned for next year.
Great program where we would like to train our staff to teach it at Glacier Peak Institute. It was a challenge as an afterschool program where youth have the expectation of going out to fish immediately. Other suggestions: We had students tie knots at the beginning of every class and have to set up the poles themselves. We did this to reinforce the knot tying and were impressed by how quickly the students began to get it. We suggest having knot tying be an activity at the beginning of school or lessons. With the lessons, we struggled to get them done in the 50 minute time period. These lessons often took much longer for the students to process and accomplish. I would recommend teachers planning on it taking much longer. We did the 12 lessons and stretched it out into 16 lessons. Overall it is a great start, and we look forward to using it in the future and watching NFSP grow.
Great program, great program, students were engaged and excited to learn everyday.
Great program !!1
This is awesome curriculum. My students were VERY excited to be part of this. Doing all 13 lessons during one school year is not realistic due to the needs of other curriculum, but I feel like I can build on what they learn each year they are exposed to it. I taught just 3rd - 5th graders this year. Next years kids can go more in depth into other lessons as they have the basic skills that I taught this year. It will be fun to try to figure out how to make this span a 2-3 year period and get more info to them about fish species and baits/lures. I really wish it was easier to take kids fishing in person!
It was great
Having a NFSP tent or booth setup at family fishing events would be pretty cool. The function of the NFSP would be to encourage and support students learning to become anglers.
The students LOVED this program. I had many more wishing they had been in the class. The best part was 'catching' the target fish. They all learned how to properly land the fish in the nets keeping it in the water. Then they all just did it naturally without any prompting. We made lots of games and contests with individually wrapped lifesavers for prizes. (Kids will do anything for even a small treat). I will definitely do this unit again next year.

We would love to hear your thoughts! Please share any additional comments, thoughts, suggestions, or ideas you have about the Fishing in Schools program in the text box provided below. (Teachers, post-Program)

Our curriculum has 12 lessons, this survey says there are 13. An answer key to the worksheets would be helpful. In general the worksheets seemed to be long and confusing for us as instructors, and even more so for the students. Participants required lots of assistance completing worksheets, they were not intuitive for students. Lessons ran longer than curriculum suggested, many required multiple 50-minute sessions to cover. Having the students practice the casting techniques was more valuable than the worksheets, but the worksheets required the most attention/time during lessons. The videos don't work as per the links given in the lesson plans. It was challenging to show videos which may have contained valuable/necessary information. Banners provided were not grommeted which made them challenging to display. The curriculum wants students to be able to ID 20 separate fish species which feels like a lot given the time constraint and the ability to focus at this age. Many of the listed fish are not local to our area so chances of students encountering them was low. Maybe allow instructors to select 3-5 local species to highlight rather than focusing on all 20 species. The knot tying lesson took more time (several days of review, and lots of individual attention) before the students were able to do them correctly, independently. Even with these hurdles they students really enjoyed learning how to fish and using the equipment. I would recommend doing this again in the future just with the understanding that the lessons often are longer than what is suggested in the current curriculum.

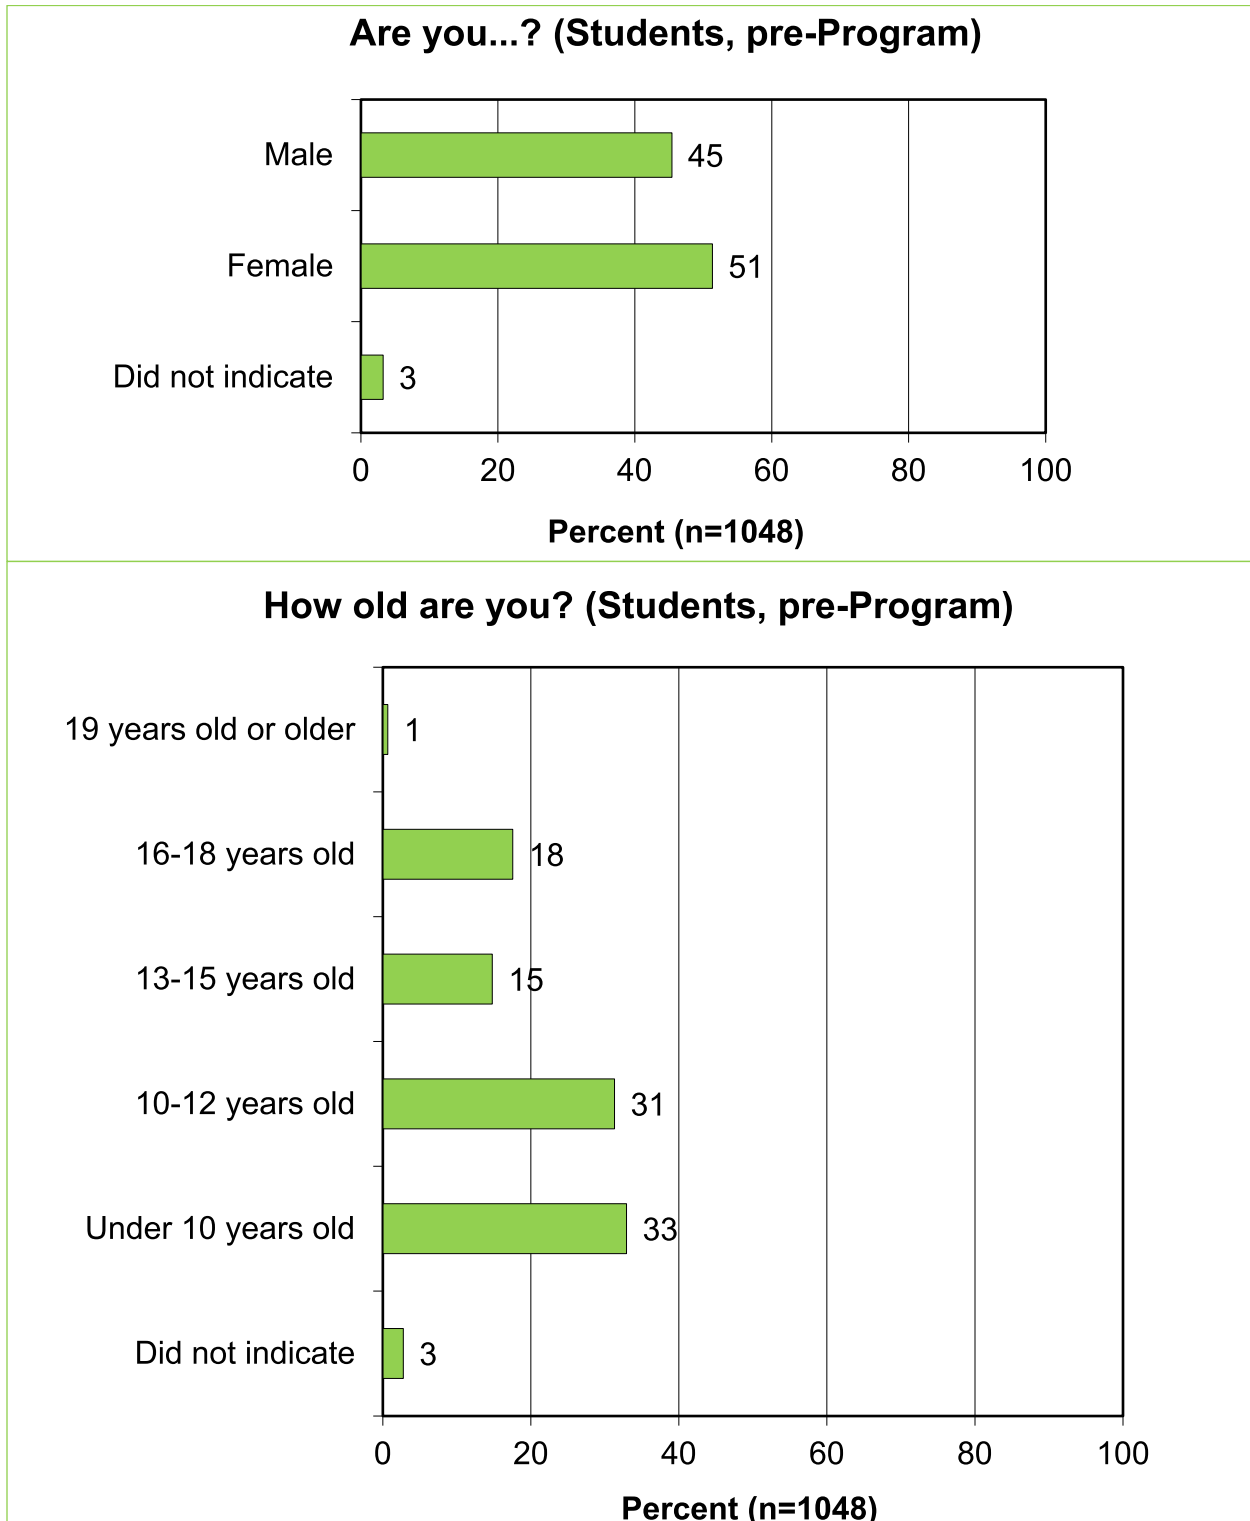

This is a great program and a great addition to my PE curriculum. I primarily introduced this to my 9th grade PE class and was happy with the blend of what the students already knew and what they learned from the curriculum. I feel like each and every one of them (even the experienced fishermen) took something new that they learned from the program. The rod quality is my only complaint.

For Elementary school I find myself blending some of the lessons to create a flow that students really find engaging. Also, the equip & techniques really replicate the 'real' fishing experience as close as can be within the classroom. Students have great questions during the lessons & it's a great addition to our program!

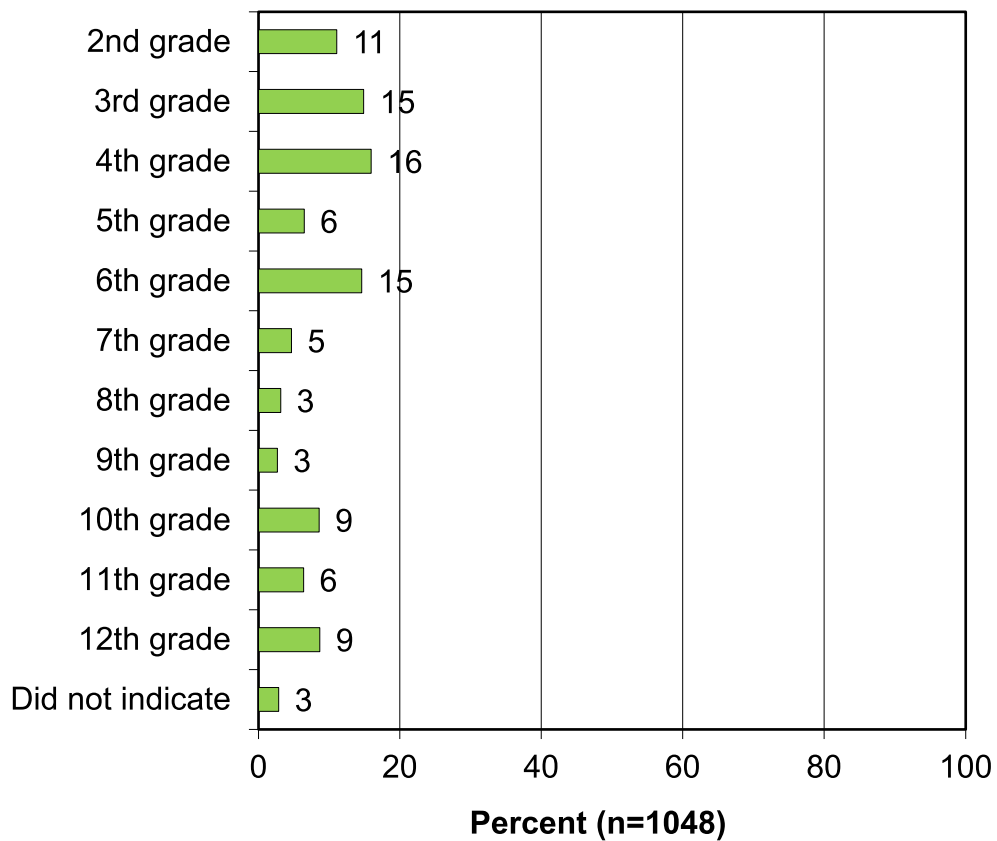

I love this program. I have been waiting a long time to be able to do this with our school. The grant helped us to finally make this a reality. I am in a Title One school where students have limited opportunities to be involved in extra curricular activities outside of school. This is definitely a life long hobby they can do on their own and with their families as they grow up!

DEMOGRAPHIC CHARACTERISTICS

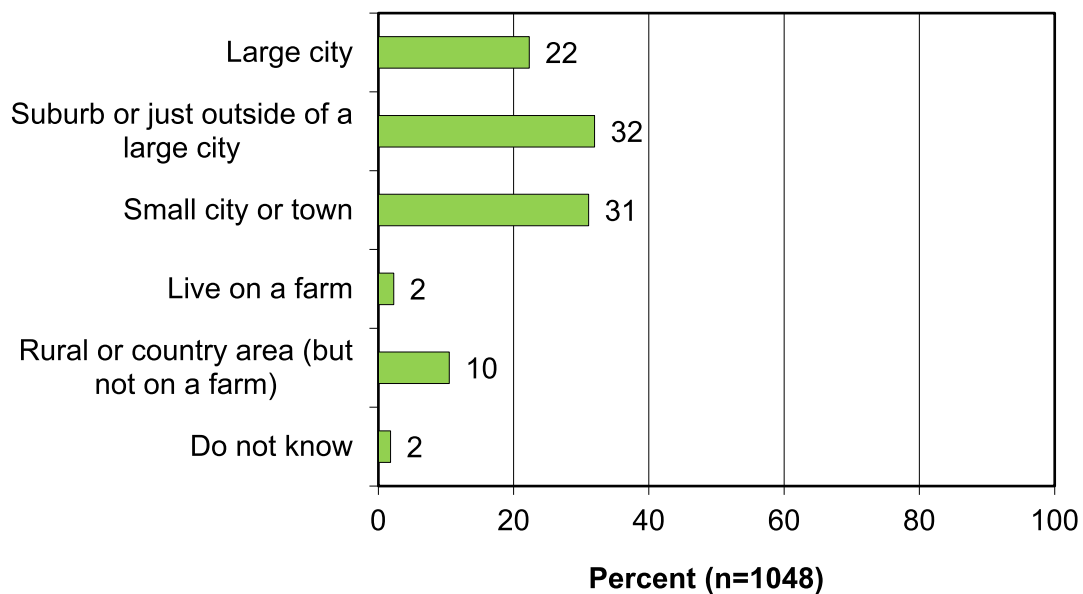

The demographic information gathered on students includes gender, age, grade, residential area, ethnicity, and family type vis-à-vis activities. For teachers, information gathered includes gender, age, residential area, and ethnicity.

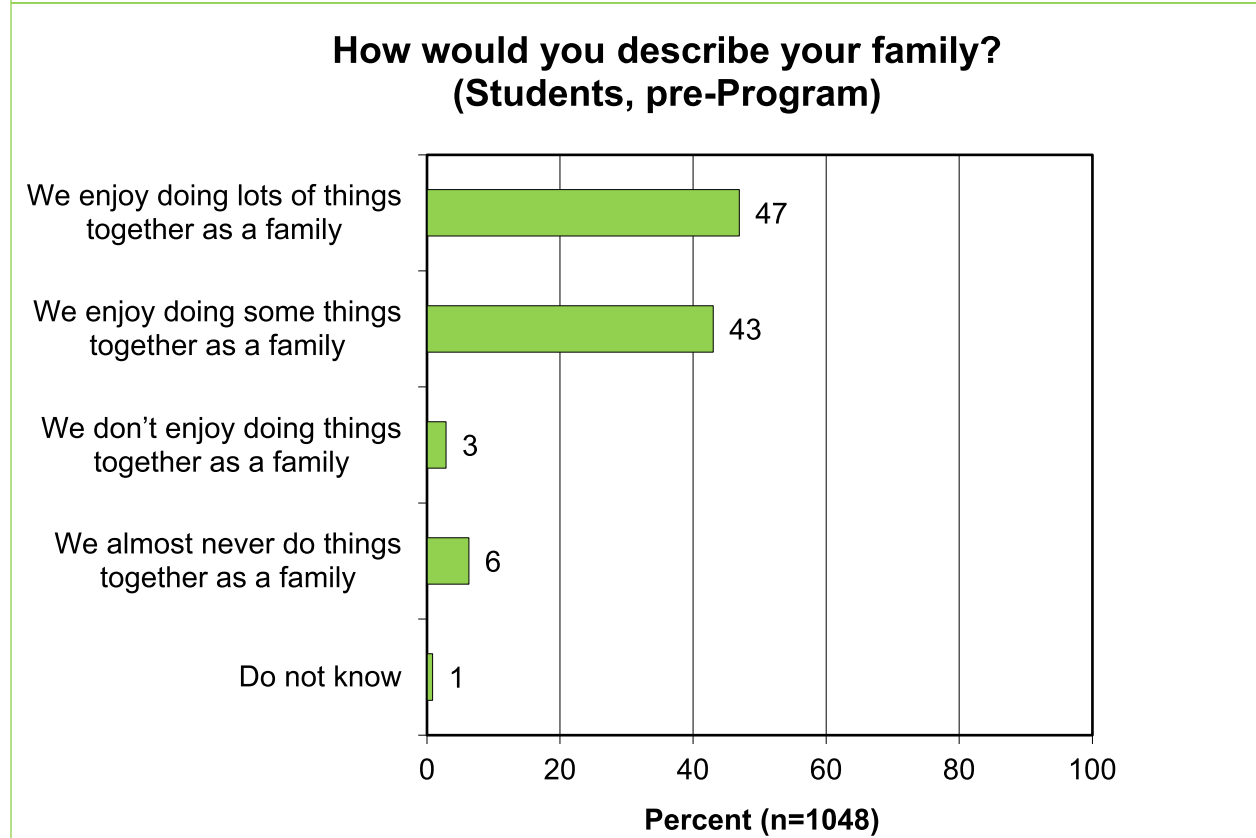

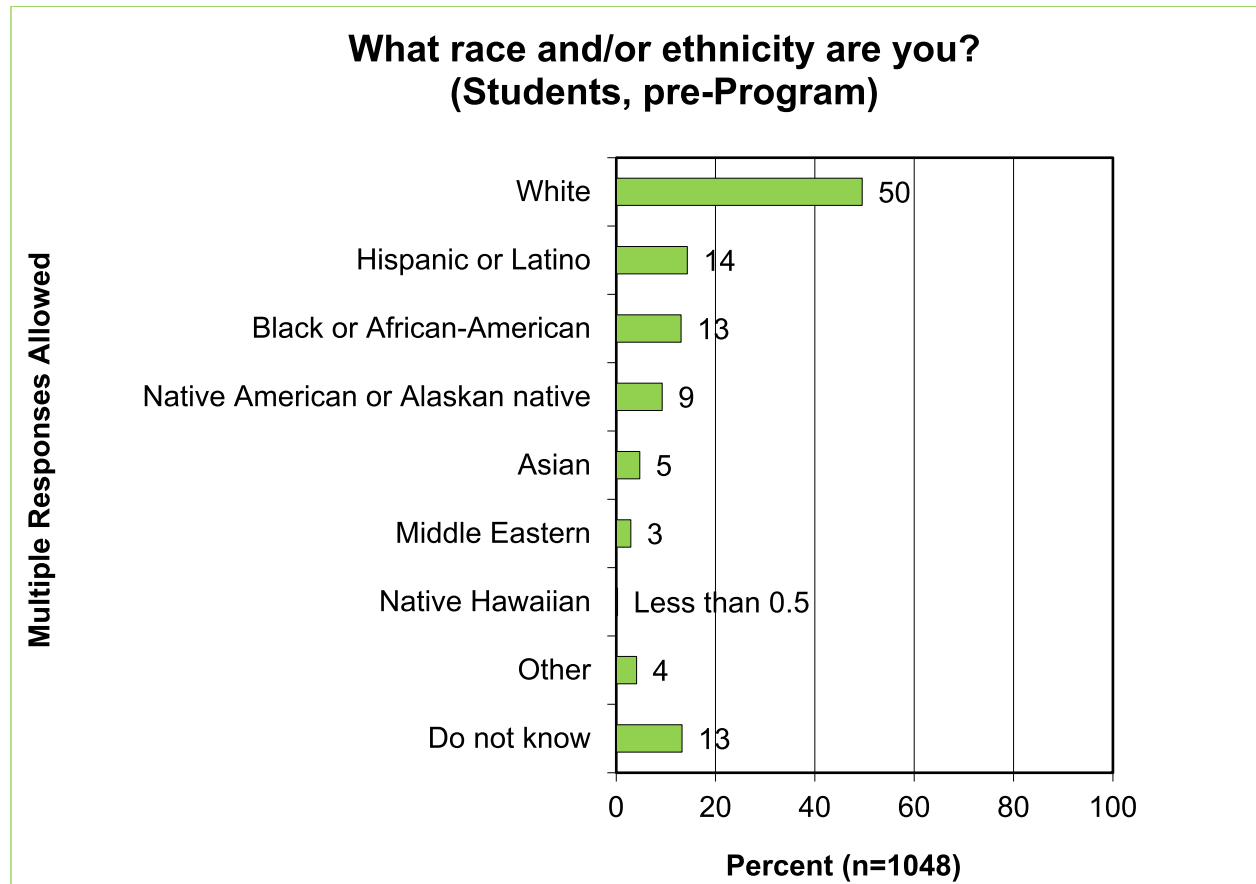

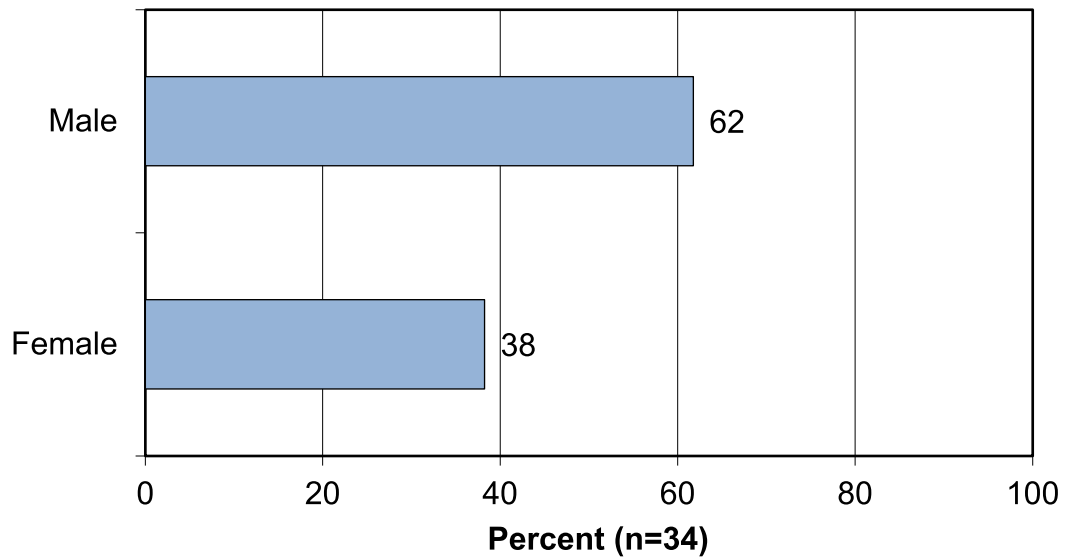

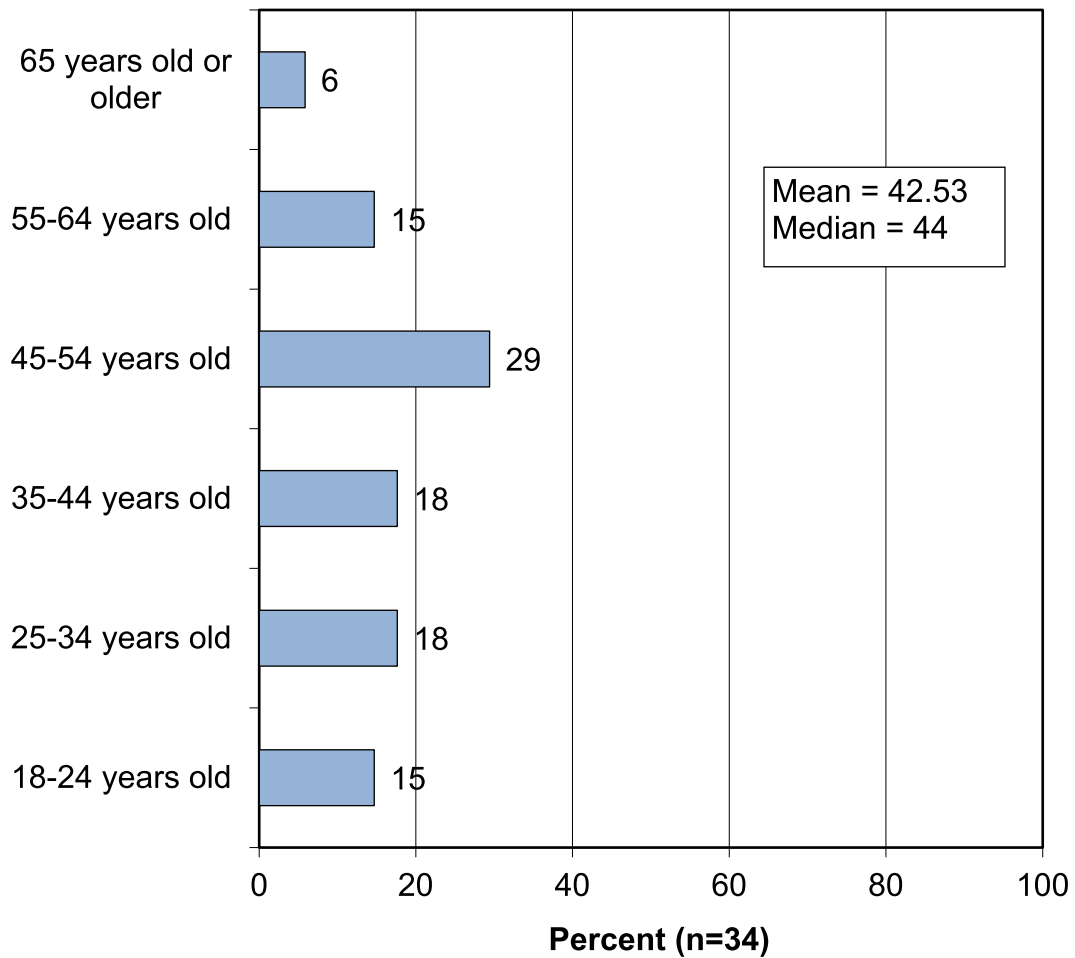

What grade are you in at school? (Students, pre-Program)

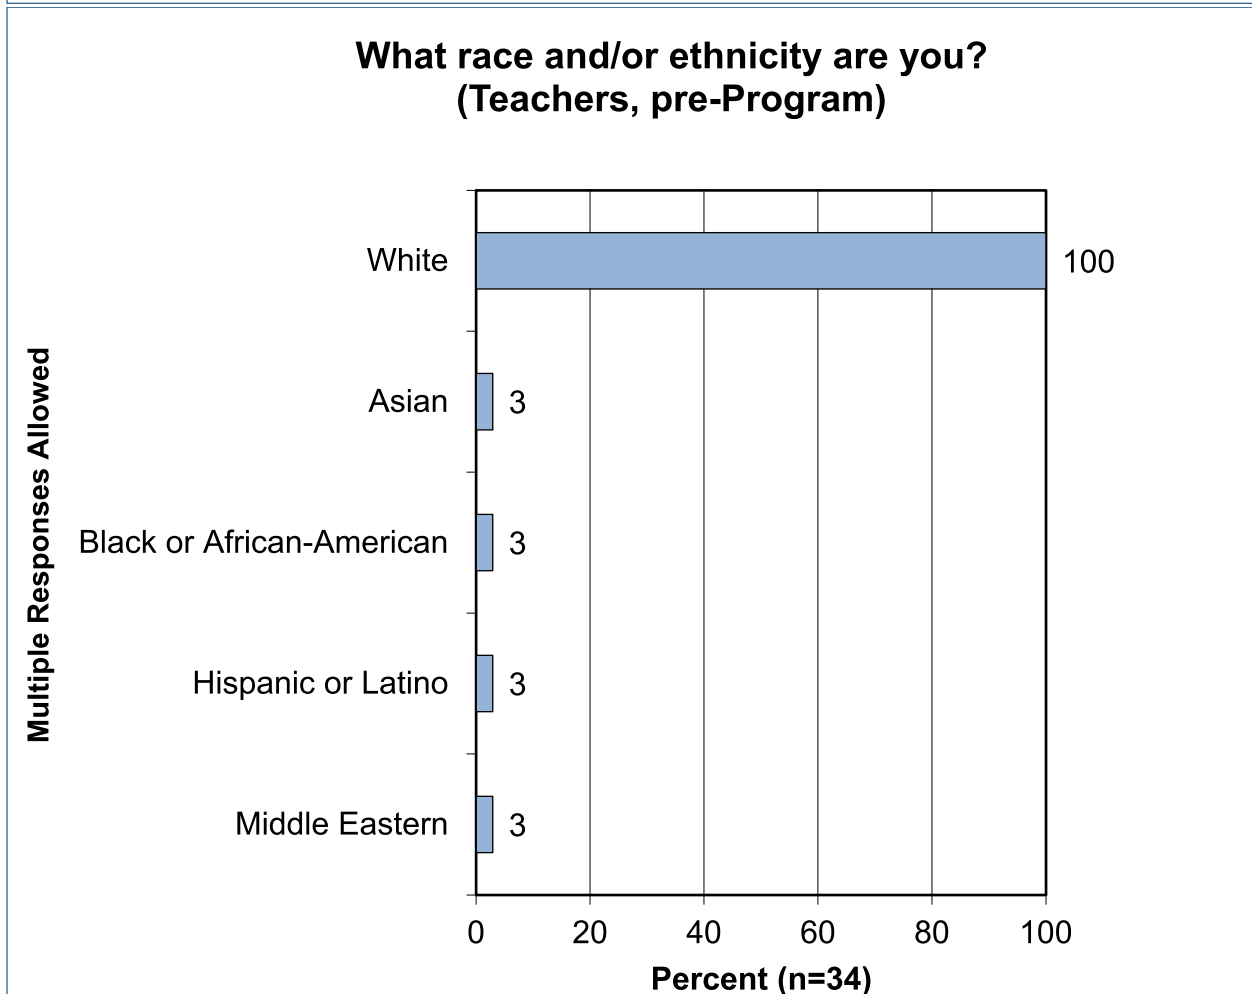

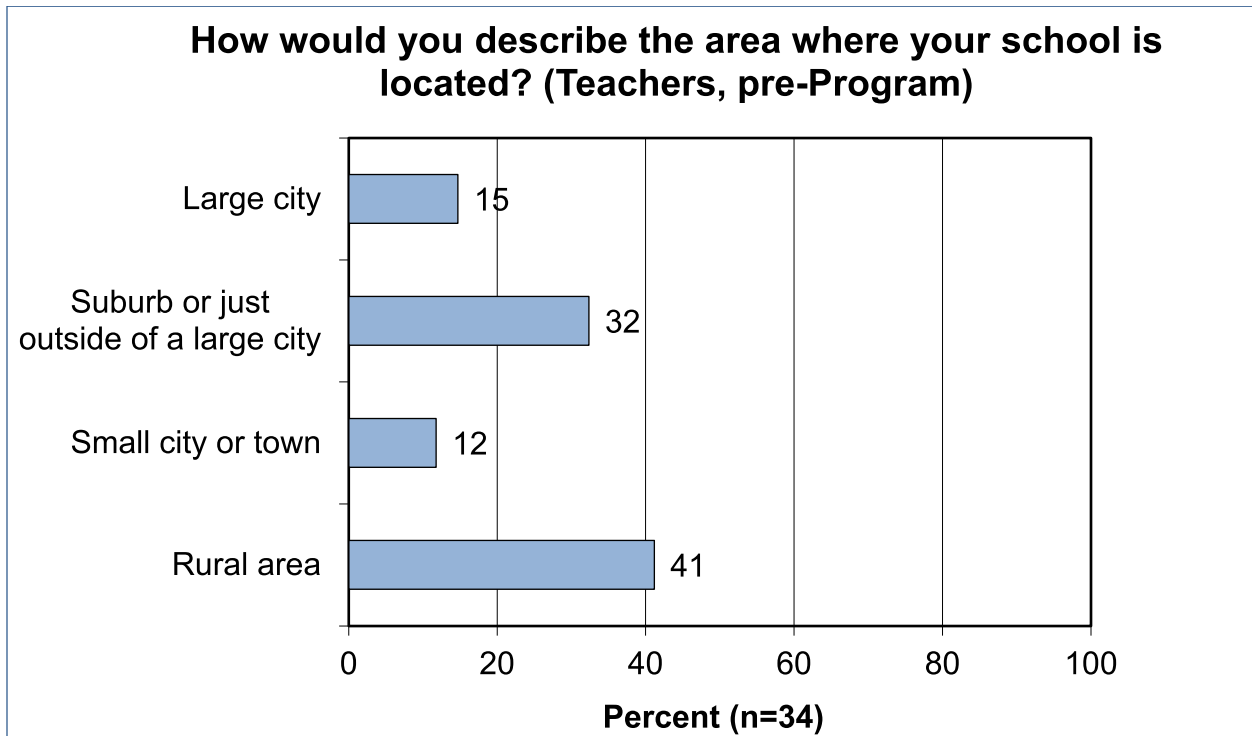

What type of area do you live in? (Students, pre-Program)

Are you...? (Teachers, pre-Program)**Teachers' ages. (Teachers, pre-Program)**

ABOUT RESPONSIVE MANAGEMENT

Responsive Management is an internationally recognized survey research firm specializing in natural resource and outdoor recreation issues. Our mission is to help natural resource and outdoor recreation agencies, businesses, and organizations better understand and work with their constituents, customers, and the public.

Focusing only on natural resource and outdoor recreation issues, Responsive Management has conducted telephone, mail, and online surveys, as well as multi-modal surveys, on-site intercepts, focus groups, public meetings, personal interviews, needs assessments, program evaluations, marketing and communication plans, and other forms of human dimensions research measuring how people relate to the natural world for more than 30 years. Utilizing our in-house, full-service survey facilities with 75 professional interviewers, we have conducted studies in all 50 states and 15 countries worldwide, totaling more than 1,000 human dimensions projects *only* on natural resource and outdoor recreation issues.

Responsive Management has conducted research for every state fish and wildlife agency and every federal natural resource agency, including the U.S. Fish and Wildlife Service, the National Park Service, the U.S. Forest Service, Bureau of Land Management, U.S. Coast Guard, and the National Marine Fisheries Service. Additionally, we have also provided research for all the major conservation NGOs including the Archery Trade Association, the American Sportfishing Association, the Association of Fish and Wildlife Agencies, Dallas Safari Club, Ducks Unlimited, Environmental Defense Fund, the Izaak Walton League of America, the National Rifle Association, the National Shooting Sports Foundation, the National Wildlife Federation, the Recreational Boating and Fishing Foundation, the Rocky Mountain Elk Foundation, Safari Club International, the Sierra Club, Trout Unlimited, and the Wildlife Management Institute.

Other nonprofit and NGO clients include the American Museum of Natural History, the BoatUS Foundation, the National Association of Conservation Law Enforcement Chiefs, the National Association of State Boating Law Administrators, and the Ocean Conservancy. As well, Responsive Management conducts market research and product testing for numerous outdoor recreation manufacturers and industry leaders, such as Winchester Ammunition, Vista Outdoor (whose brands include Federal Premium, CamelBak, Bushnell, Primos, and more), Trijicon, Yamaha, and others.

Responsive Management also provides data collection for the nation's top universities, including Auburn University, Clemson University, Colorado State University, Duke University, George Mason University, Michigan State University, Mississippi State University, North Carolina State University, Oregon State University, Penn State University, Rutgers University, Stanford University, Texas Tech, University of California-Davis, University of Florida, University of Montana, University of New Hampshire, University of Southern California, Virginia Commonwealth University, Virginia Tech, West Virginia University, Yale University and many more.

Our research has been upheld in U.S. Courts, used in peer-reviewed journals, and presented at major wildlife and natural resource conferences around the world. Responsive Management's research has also been featured in many of the nation's top media, including *Newsweek*, *The Wall Street Journal*, *The New York Times*, CNN, National Public Radio, and on the front pages of *The Washington Post* and *USA Today*.
